Chief of Naval Operations

**Carlisle H. Trost, ADM, USN**

## **CNO GRADUATE EDUCATION POLICY**

Because we face ever increasing complexities in technological, managerial, and political/economic fields which affect the Navy, we need officers with a solid intellectual capacity and the vision to capitalize on evolving technology, and developments. This requires officers capable of original thought and the capacity to synthesize broad areas of knowledge, analyze complex issues, and appreciate the distinction between what is theoretically possible and actually achievable. Investment in graduate education must be pursued as a priority, even in the face of fiscal austerity and competing demands for our junior officers.

The fully funded graduate education programs are intended primarily for lieutenants and lieutenant commanders who have demonstrated superior professional performance and the intellectual capability to complete a rigorous academic program. These academic programs are designed to equip officers with enhanced intellectual and analytical capacity and make them more skillful warriors and specialists. Our goal is to achieve twenty percent of the officer corps with a graduate level subspecialty.

The intention of graduate education is to prepare an officer for a long career of contributions. Therefore, the tendency to train officers for their next assignment must be balanced by graduate education which furthers their ability to contribute. Program length will normally be two years or less to limit costs.

Officers selected for fully funded graduate education will usually be assigned to study at the Naval Postgraduate School (NPS). NPS programs will be maintained with a predominant emphasis on scientific and engineering subjects. NPS will also provide a program of continuing education so prospective students can improve their knowledge and graduates can maintain currency. For those curricula not offered at NPS, officers will be sent to quality civilian or DoD institutions approved by the appropriate program sponsor.

## **GRADUATE EDUCATION**

Any Navy's ability to capitalize on new technology is linked to its level of officer competence. Accordingly, the United States faces a significant challenge to ensure the intellectual and technical competence of its officers. Of the military services, the Navy is the most hardware intensive. This fact is related to the broad scope of its operational domains: undersea, surface, air, and space. Each levies significant and unique demands to effectively match the nation's technological opportunities to operational reality. This is a complex process that demands the highest quality of intellectual and professional skills.

### **Fully Funded Program**

The Navy's graduate education program supports fleet and shore establishment requirements for specialized education beyond the baccalaureate level. This education is directed toward filling current and future Navy needs in operational, technical and manage-

rial areas in concert with the Officer Subspecialty System. Officers are educated to the graduate level specified by sponsors for optimum performance of duty in the particular subspecialty area. Under the fully-funded program, officers attend school full time, receive all pay and benefits and have tuition paid by the Navy. Fully-funded graduate education is provided at the Naval Postgraduate School (NAVPGSCOL), Monterey, CA and selected DoD and civilian institutions (CIVINS).

### **Utilization**

Officers who have received Navy fully-funded graduate education will serve one tour in a validated subspecialty position as soon as possible but not later than the second tour following graduation. These officers will serve at least two tours in related subspecialty billets, and successfully completing a subspecialty tour will be viewed as an important indicator of potential for higher rank.

## **THE SCHOOL AND ITS MISSION**

The Navy has developed at the Naval Postgraduate School an unusual academic institution in which the special purposes of the Navy are served through the use of academic programs and structure that are very similar to those of civilian universities. The student body is made up wholly of U.S. and international officers of the military services and federal civilians who are being educated to fill the managerial and technological needs of the services. It must be stressed that the

School is primarily an academic institution with emphasis on programs that are relevant to Navy interests, with an accommodation to unique requirements of matching, scheduling and sequencing officers into the programs.

**Mission:** The Navy's needs for advanced education of Naval Officers in the fields of science, engineering, operations analysis and management are met primarily through the academic programs of the Naval Post-

graduate School. Complementing the School's programs in these fields are programs at certain civilian universities which are preeminent in areas related to the interests of the Navy.

The broad responsibility of the Naval Postgraduate School toward the advanced education of naval officers is reflected in its stated mission.

"To conduct and direct the advanced education of commissioned officers, and to provide such other technical and professional instruction as may be prescribed to meet the needs of the Naval Service, and in support of the foregoing, to foster and encourage a program of research in order to sustain academic excellence."

**Goals:** The mission of the Naval Postgraduate School establishes the continuing combined requirements of excellence in quality of academic programs and responsiveness to change and innovation in the technology and management in the Navy. The following educational goals of the School are

dictated by this requirement:

"To enhance continually the contribution of the content of the academic programs to the Navy and the Department of Defense.

"To sustain intense efforts to provide the best education to the students of the Naval Postgraduate School, and to build a progressively better environment where faculty and students can come together in the search for knowledge and professional excellence.

"To nurture in students a respect for rigor in thought and discipline in work which will be a hallmark of their pursuit of excellence in their professions.

"To search for faculty who by their scholarship and fresh viewpoint will bring stimulating presentations to the classroom, new vigor to the laboratory and through their research sustain a program of academic excellence."

## FROM THE BEGINNING

The Naval Postgraduate School is in its 79th year of operation. The development of a naval institution of higher learning dedicated to the advanced education of commissioned officers began on 9 June 1909 when the Postgraduate Department of the U.S. Naval Academy was established at Annapolis. Ten officers made up the first class, three professors formed the faculty, and marine engineering was the one course of study. In 1919, the postgraduate department was renamed the United States Naval Postgraduate School, but still operated as a part of the Naval Academy.

With the advent of World War II, the School's activities increased substantially. There was a large growth in student enrollment and educational programs were expanded to meet the evolving needs of the Navy. Following the end of the War, plans were initi-

ated to move the School to more suitable facilities and to enhance its academic status.

Between 1945 and 1948, Congress established the School as a separate activity under its own Superintendent, created the office of Academic Dean and granted the Superintendent the authority to award the bachelor's, master's and doctor's degrees. It also approved Monterey as the future home of the School. The Navy officially established the School on the West Coast on 22 December 1951. With its enlarged facilities, the School continued to grow in curricular programs and in student enrollment. In 1956, the Navy Management School was formed as a component of the Postgraduate School to provide graduate education in the theory and application of administrative sciences.

Currently, the Naval Postgraduate School graduates approximately 800 students per year and offers a range of curricular programs specifically tailored to impart the scientific, engineering, operational and administrative knowledge required to meet the present and projected professional needs of the Department of Defense. Its student body includes officers of all five U.S.

services and approximately 25 allied services. U.S. Naval Officers constitute 60% of the student body, with 23% coming from other U.S. Services. The remaining 17% is made up of foreign officers. Also, since 1975, the Postgraduate School has enrolled civilian employees of the U.S. Federal Government.

## DEGREES

The Naval Postgraduate School is authorized to confer Bachelor's, Master's, Engineer's and Doctor's degrees upon qualified graduates. Recipients of such degrees must be found qualified by the Academic Council in accordance with prescribed academic standards.

### ACCREDITATION

The Naval Postgraduate School is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges. Engineering curricula accredited by the Accrediting Board for Engineering and Technology (ABET) are Aeronautical, Electrical and Mechanical. Degrees offered in Engineering Science and Engineering Technology are not accredited by ABET. The Administrative Sciences Curricula are accredited by the National Association of Schools of Public Affairs and Administration.

### MASTER'S DEGREES

Requirements for the Master of Arts and Master of Science Degrees:

The Master's Degree may be awarded for successful completion of a curriculum which has the approval of the Academic Council as meeting the degree requirements. Such curricula shall conform to current practice in accredited institutions and shall contain a well-defined major.

General Postgraduate School minimum requirements for the Master's Degree are as follows:

1. 32 quarter hours of graduate level credits for which at least 20 quarter hours must be earned on campus.
2. A thesis, or its equivalent, is required. If the thesis is waived, at least 8 quarter hours of approved courses at the 4000 level, or comprehensive examinations, shall be the thesis substitute.
3. Departmental requirements for the degree in a specified subject.
4. A quality point rating of at least 3.00 in all graduate courses in the curriculum, and either 2.50 in the remaining courses or 2.75 in all courses in the curriculum.

Requirements for specific degrees may exceed these general requirements.

### Master of Arts Degree Offered:

National Security Affairs

### Master of Science Degrees Offered:

Aeronautical Engineering  
Applied Mathematics  
Applied Science  
Computer Science  
Electrical Engineering  
Engineering Acoustics  
Engineering Science  
Hydrographic Sciences

Information Systems  
Management  
Mathematics  
Mechanical Engineering  
Meteorology  
Meteorology and Oceanography  
National Security Affairs  
Operations Research  
Physical Oceanography  
Physics  
Systems Technology  
Systems Engineering  
Telecommunications Systems  
Management

### Master's Degrees with Distinction:

The award of the Master of Science and the Master of Arts degrees may be made "With Distinction" when a student completes the degree requirements with a minimum of 32-quarter hours earned in residence and is judged to be in the upper 10% of the graduating classes during the academic year from the student's department.

### ENGINEER'S DEGREES

**Requirements:** The Engineer's Degree typically represents one year of study beyond the Master's Degree. It is awarded for successful completion of a curriculum which has the approval of the Academic Council as meriting the degree.

Minimum Postgraduate School requirements for the degree of Engineer are as follows:

1. 72 quarter hours of graduate level courses, including at least 30 hours in courses 4000-4999.
2. An acceptable thesis.
3. One academic year in residence.
4. Departmental requirements for the degree in a specified engineering field.
5. A quality point rating of at least 3.00 in all graduate courses in the curriculum, and either 2.50 in the remaining courses or 2.75 in all courses of the curriculum.

### Engineer's Degrees Offered:

Aeronautical Engineer  
Electrical Engineer  
Mechanical Engineer

### DOCTOR'S DEGREES

**Requirements:** Any program leading to a Doctor's Degree shall require the equivalent of at least three academic years of study beyond the baccalaureate level, with at least one academic year being spent at the School. A requirement for admission is a Bachelor's degree that includes the prerequisites for full graduate status in the department of his major study.

A general outline of a candidate's progress through the program is as follows:

- a. Application to the appropriate department and successful completion of a screening exam.
- b. Appointment of the student's doctoral committee, which bears responsibility for the study program and guidance of the research program.
- c. Inclusion of one or more minors in the study program.
- d. For the Doctor of Philosophy, a foreign language requirement may be included at the discretion of the major department; for the Doctor of Engineering, demonstrated proficiency in computer programming is required.
- e. When the study program is essentially finished, successfully complete the qualifying examination, including both oral and written parts.
- f. Admission to candidacy and work on a doctoral dissertation on a subject approved by the doctoral committee.
- g. Upon completion of the dissertation and acceptance by the doctoral committee, administration of a final oral examination.
- h. Upon unanimous recommendation of the doctoral committee, the Academic Council recommends award of the degree.

### Doctorates Offered:

Doctor of Philosophy in:  
Aeronautical Engineering  
Computer Science

Electrical and Computer Engineering  
 Engineering Acoustics  
 Mechanical Engineering  
 Meteorology  
 Operations Research  
 Physical Oceanography  
 Physics

Doctor of Engineering in:  
 Aeronautical Engineering  
 Electrical and Computer Engineering  
 Mechanical Engineering

### POSTGRADUATE SCHOOL STATISTICS

Graduate degrees granted by NPS

since 1946 are given in the following table to provide perspective. Three of the degrees are no longer offered: Master of Science in Chemistry; Material Science, and the undesignated Master of Science Degree. The Master of Science in Computer Systems Management has been changed to Master of Science in Information Systems Management. Growth in program offerings is evident as the figures are tracked from left to right. Between 1955 and 1965 the range of degrees doubled, and by 1975 they had increased again by nearly the same number. Within recent years the populations and offerings have, on an overall basis, been stable.

Superintendent  
 Ralph W. West, Jr., RADM, USN

## AWARDS FOR GRADUATES

### ADMIRAL WILLIAM ADGER MOFFETT AWARD

This award is presented annually to an outstanding graduate of the Aeronautical Engineering program on the basis of academic excellence, including thesis, and career potential.

### ARMY CHIEF OF STAFF AWARD FOR EXCELLENCE IN OPERATIONS RESEARCH

Presented semiannually to a U.S. Army Officer student in the Operations Analysis Program who possesses an outstanding academic record, including thesis and project work, and who demonstrates qualities indicative of an outstanding military officer.

### ARMED FORCES COMMUNICATIONS AND ELECTRONICS ASSOCIATION HONOR AWARD

Presented to that officer graduate who has achieved academic excellence and best demonstrated professional qualities in one of the following programs: Electronics, Communications, Intelligence, Command and Control, or Computer Technology.

### ASTRONAUT MICHAEL J. SMITH, CAPT, USN, ASTRONAUTICS AWARD

Astronaut and CAPT Michael J. Smith, who was an alumnus of NPS gave his life exploring space for the enrichment of mankind. This award is presented annually to an outstanding graduate of the Space Systems Engineering or Space Systems Operations curricula. The award is made on the basis of the student's academic excellence, including thesis, and his career potential.

### CAPTAIN JOHN C. WOELFEL AWARD

Presented each June to the outstanding Naval Engineering program officer student on the basis of academic and leadership qualities and performance. Officers from the past September, December, March and June graduation classes are considered.

### CHIEF OF NAVAL OPERATIONS ANTISUBMARINE WARFARE AWARD

Sponsored by the National Security Industrial Association and presented in recognition of distinguished academic achievement to that ASW Curriculum graduate who has demonstrated outstanding academic performance and exhibited those qualities indicative of an outstanding military officer.

### CHIEF OF NAVAL OPERATIONS COMMUNICATIONS AWARD

Presented in recognition of distinguished academic achievement in the Communications Engineering or Telecommunications Systems programs to that graduate who has attained an outstanding academic record and who exhibits those qualities of an outstanding military officer.

### CHIEF OF NAVAL OPERATIONS AWARD FOR EXCELLENCE IN MANPOWER, PERSONNEL AND TRAINING ANALYSIS

This award is given semiannually to a U.S. Navy, or Op-01 sponsored civilian, graduate of the Manpower, Personnel and Training Analysis curriculum who has demonstrated outstanding academic performance, thesis quality and leadership potential.

**CHIEF OF NAVAL OPERATIONS  
AWARD FOR EXCELLENCE IN  
OPERATIONS RESEARCH**

Presented semiannually to the outstanding USN or USMC graduate of the Operations Research Program on the basis of academic achievement, experience tour performance, thesis work and demonstration of those qualities indicative of the outstanding military officer.

**DEPARTMENT OF THE NAVY  
AWARD FOR ACADEMIC  
EXCELLENCE IN FINANCIAL  
MANAGEMENT**

This award is presented semiannually to a financial management student who demonstrates overall academic performance, academic excellence in financial management courses, high leadership potential, future ability to contribute to professional, academic and public forums while meeting the highest standards of stewardship of the financial trust, and thesis excellence.

**JOINT CHIEFS OF STAFF  
COMMAND, CONTROL AND  
COMMUNICATIONS AWARD FOR  
ACADEMIC ACHIEVEMENT**

Presented to the outstanding graduate of the Command, Control and Communications Program in recognition of distinguished academic achievement based upon grades obtained, quality of thesis and overall performance.

**MEWBORN STUDENT RESEARCH  
AWARD**

Presented annually to an officer student whose thesis exhibits sound scholarship and highest research ability. Criteria of selection conform as nearly as possible to the concept of "evidence of research potential" which forms the basis for election to Associate Membership in the Society of Sigma Xi.

**MILITARY OPERATIONS  
RESEARCH SOCIETY GRADUATE  
RESEARCH AWARD**

Presented in recognition of outstanding achievement in graduate research directed toward improving military force utilization. The primary award criterion is research which leads to demonstration of, or potential for, increased operating effectiveness of currently available or near term assets.

**MONTEREY PENINSULA  
COUNCIL NAVY LEAGUE AWARD  
FOR HIGHEST ACADEMIC  
ACHIEVEMENT**

Presented quarterly to the graduating USN, USMC or USCG officer who has maintained the highest academic record as a student at the Naval Postgraduate School.

**NAVAL SEA SYSTEMS COMMAND  
AWARD IN NAVAL ENGINEERING**

Presented in recognition of distinguished academic achievement in the Naval Engineering Program. The criteria for the award include demonstrated academic excellence measured by marks attained, content of thesis and demonstrated leadership potential in Naval Engineering.

**NAVAL SEA SYSTEMS COMMAND  
AWARD FOR WEAPON SYSTEMS  
ENGINEERING EXCELLENCE**

Presented in recognition of distinguished scholastic achievement in a Weapons Engineering field of study. Selection is based upon marks attained, quality and applicability of thesis and demonstrated leadership potential in the field of Weapons Engineering.

**NAVAL SUPPLY SYSTEMS  
COMMAND AWARD FOR  
ACADEMIC EXCELLENCE IN  
ADMINISTRATIVE SCIENCES**

Presented semiannually to an outstanding U.S. Navy Supply Corps of-

ficer in Administrative Sciences. This award is made on the basis of academic achievement, research excellence, and contribution to the professional and civilian community and faculty recommendation.

**NAVAL SURFACE WEAPONS  
CENTER AWARD FOR  
EXCELLENCE IN SURFACE  
WARFARE TECHNOLOGY**

Presented semiannually to a U.S. Naval officer of high academic standing whose thesis topic and quality of supporting research demonstrates the greatest potential for contribution to surface warfare.

**NAVAL UNDERWATER SYSTEMS  
CENTER AWARD FOR  
EXCELLENCE IN UNDERWATER  
SYSTEMS TECHNOLOGY**

Presented annually to the student, who by academic standing and relevance of thesis topic, has demonstrated the greatest achievement in the field of Underwater Systems Technology.

**OCEANOGRAPHER OF THE NAVY  
AIR-OCEAN SCIENCES AWARD**

Presented to a U.S. Naval Officer graduate of the Air-Ocean Sciences Program who has demonstrated outstanding performance and exhibited those qualities indicative of an outstanding military officer.

**REAR ADMIRAL GRACE MURRAY  
HOPPER AWARD FOR  
COMPUTER TECHNOLOGY**

Presented to a graduating USN, USMC or USCG officer on the basis of thesis quality, academic performance and demonstrated leadership ability in the study of computer technology.

**REAR ADMIRAL  
THOMAS R. MCCLELLAN AWARD  
FOR ACADEMIC EXCELLENCE IN  
ADMINISTRATIVE SCIENCES**

Presented to a graduate of Administrative Sciences from the aviation community, based upon academic performance, professional commitment, and leadership potential.

**NAVAL SEA SYSTEMS COMMAND  
AWARD IN ELECTRONIC  
WARFARE TECHNOLOGY**

Presented in recognition of academic achievement in the Electronic Warfare Systems Technology Program to that graduate who has attained an outstanding academic record and who has exhibited outstanding leadership qualities.

**SPACE AND NAVAL WARFARE  
SYSTEMS COMMAND AWARD IN  
ELECTRONICS SYSTEMS  
ENGINEERING**

Presented semiannually to a U.S. Naval Officer student in recognition of distinguished academic achievement in the advanced Electronics Engineering program.

**UNITED STATES NAVAL  
INSTITUTE AWARD**

Presented each quarter to that recipient of a master's degree in National Security Affairs whose achievement has significantly advanced professional, literary or scientific knowledge in the naval or maritime services.

**WARREN RANDOLPH CHURCH  
AWARD**

Presented annually to an officer student for outstanding performance in mathematics. The criteria for selection include evidence of initiative, scholarly attitude and mathematical maturity.

## GENERAL INFORMATION

---

### **MENNENKEN FACULTY AWARD EXCELLENCE IN SCIENTIFIC RESEARCH**

Presented annually to a Naval Postgraduate School faculty member in recognition of outstanding effort and achievement in research in the area of Science or Engineering.

### **FACULTY AWARD FOR EXCELLENCE IN MANAGEMENT**

Presented semiannually to an outstanding student in Administrative Sciences at the Naval Postgraduate School in recognition of distinguished academic achievement.

### **THE NAVAL POSTGRADUATE SCHOOL SUPERINTENDENT'S AWARD FOR OUTSTANDING ACADEMIC ACHIEVEMENT**

Presented quarterly to the graduating International student who has

maintained an outstanding academic record as a student at the Naval Postgraduate School.

### **THE SPACE SYSTEMS ENGINEERING AWARD FOR ACADEMIC EXCELLENCE**

Presented annually to an outstanding student in Space Systems Engineering program in recognition of distinguished academic achievement based upon grades obtained, quality of thesis and overall performance.

### **THE SPACE SYSTEMS OPERATIONS AWARD FOR ACADEMIC EXCELLENCE**

Presented annually to an outstanding student in Space Systems Operations program in recognition of distinguished academic achievement based upon grades obtained, quality of thesis and overall performance.

## GRADES

Student academic performance is evaluated in terms of quality points assigned each letter grade achieved in a course. Based on the level of achievement associated with each letter grade, the corresponding quality point values range from a maximum of 4.0 to a minimum of 0 as follows:

Grade	Point Value
A	4
A-	3.7
B+	3.3
B	3
B-	2.7
C+	2.3
C	2
C-	1.7
D+	1.3
D	1
X	0

Letter designations for which no quality points are assigned are given as follows:

I	Incomplete
W	Withdrawn
N	Ungraded
P	Pass
F	Fail

The grade of Incomplete is given when an identifiable portion of the course remains undone at the end of the quarter. One additional quarter is granted to submit the delinquent work. If the I is not removed within the twelve weeks following the end of the term in which it was assigned, it becomes an X.

A student may withdraw from a course up to the end of the second week of the quarter without any record of it showing on the transcript. Withdrawals may be made after that up to the end of the eighth week of the quarter, but a grade of W is entered for the course on the transcript. No withdrawals can be made after the eighth week.

Courses may be designated for P and F grading when approved by the Academic Department and the Academic Council. A student in a degree program who wishes to take courses not in his normal program may elect to take them in the Pass/Fail mode. Approval must be granted by the student's cognizant Curricular Officer and Department Chairman. It is the responsibility

of the student to exercise the P/F option by informing the instructor **in writing** at the time of enrollment that a P/F grade is desired. A copy of the approved request shall be forwarded to the Registrar. Students electing to receive the P/F grade in letter graded courses may not apply the hours toward the degree and curriculum requirements of any program.

## QUALITY POINT RATING QPR

When the quarter-hour credit of a course is multiplied by the point value of the student's grade, a quality point value for the student's work in the course is obtained. The sum of the quality points for all courses divided by the sum of the quarter-hour credit of these courses gives a weighted numerical evaluation of the student's performance, termed the Quality Point Rating (QPR). A student achieving a QPR of 3.0 has maintained a B average in all courses undertaken with a proper weight assigned for course hours.

COURSES

Courses are designated by an alphanumeric symbol consisting of two letters and four numbers. The first two letters designate the academic department which offers the course, and are defined as follows:

Administrative Sciences	
Service Courses	AS
Telecommunications Systems Management	CM
Defense Communications	CO
Information Systems Management	MN
Aeronautics	AE
Antisubmarine Warfare	ST
Command, Control and Communications	CC
Computer Science	CS
Electrical and Computer Engineering	EC
Electronic Warfare	EW
Mathematics	MA
Mechanical Engineering	ME
Materials Science	MS
Meteorology	MR
National Security Affairs	NS
Oceanography	
Oceanographic Sciences	OC
Hydrographic Sciences	GH
Operations Research	
Operations Analysis	OA
Service Courses	OS
Physics	PH
Science and Engineering	SE

Courses are assigned numbers in accordance with their level of academic credit.

0001-0999	No credit
1000-1999	Lower division college credit (Freshman - Sophomore Level)
2000-2999	Upper division college credit (Junior - Senior level)
3000-3999	Upper division college or graduate credit
4000-4999	Graduate credit

Following the course designator are two numbers in parentheses separated by a hyphen which indicate the hours of instruction per week in the classroom and in the laboratory, respectively. Laboratory hours are assigned half the value shown in calculating quarter hours for the credit value of the course. Thus a (3-2) course, having three hours lecture and two hours laboratory, will be assigned a credit value of 4 quarter hours.

COURSE REGISTRATION AND CREDIT

Each student must be registered in each course in which he/she is a candidate for credit not later than the end of the second week of the term. No student will receive credit for a course unless registration in that course has been approved by one of the following: his/her curricular officer or academic associate, the chairman of his doctoral committee, or the Dean of Academic Administration.

**Overload:** A student may not enroll for more than 21 total credit hours or more than four 3000 and/or 4000 courses (excluding laboratories or explicit curriculum requirements) per quarter unless he has either a total QPR of at least 3.50 or permission of the Department or Group Chairman and the Dean of Academic Administration.

**Repetition of Courses:** A student may repeat a course for the purpose of improving his/her grade when the grade received originally was either D or X, provided such course repetition is taken at the Postgraduate School. Approval must be granted by both the Curricular Officer and the Department Chairman concerned, and the Registrar is to be notified.

For record purpose, both the original and the repeated courses are to be shown on the transcript. For Quality Point Rating computation, the credit hours of the course shall be counted once with the quality points earned being the average of the two.

**Medical Absence:** The academic record of a student may be deleted completely for a given term when he/she is absent for a portion of the term for medical reasons. The transcript will show, "Excused for the term for medical reasons". The student shall not be permitted to delete only a portion of his/her courses for this reason. The grade "W" shall be used when it is necessary to withdraw from only a part of the student's program. Such excusals shall be requested by the Curricular Officer and approved by the Dean of Academic Administration.

**Credit by Examination:** The award of credit solely on the basis of examination for any 1000 or 2000 level course is permissible. Grades for such courses shall be awarded on a Pass/Fail basis.

## VALIDATION

A student with the appropriate background may validate a course that is required for his/her curriculum. Validation will allow the student to omit that course from the program of study; however, no credit will be granted for a course that has been validated. The basic purpose of course validation is to make optimal use of the student's time at the Naval Postgraduate School. Every validation must be justified by documented evidence of prior work in the area of the course to be validated.

The validation of a course must be approved in writing by the chairman of the department offering the course or by someone designated in writing by

the chairman to act for him/her in this regard. Specific criteria for validation (e.g., review of the student's transcripts or examination on the material of the course) are left to the discretion of the cognizant department chairman.

After validating one or more courses, it may be appropriate for a student to complete his/her program in less than the maximum time allowed.

## ADMISSIONS

U.S. Navy officers interested in attending one of the curricula offered at the Naval Postgraduate School are referred to OPNAVINST 1520.23 and to the latest OPNAVNOTE 1520. These documents provide guidance, information and policy for the Navy's fully-funded graduate education program.

## SELECTION PROCEDURES

Selection for the Navy fully-funded graduate education program is based on outstanding professional performance, promotion potential and a strong academic background. Unrestricted Line officers being considered by statutory selection boards for promotion to Lieutenant or Lieutenant Commander are eligible for selection for fully-funded graduate education. Restricted Line and Staff Corps eligibility information is available through community newsletter or directly from assignment officers. Boards will select groups of officers considered to be professionally qualified; upon determination of academic qualification (by NAVPSGCOL), individuals are eligible for assignment. Officers who are professionally qualified but lack academic qualifications should contact the Director of Admissions for information on ways to improve their academic background. Once selected, officers will be notified by COMNAV-MILPERSCOM notice.

**TABLE OF ACADEMIC PROFILE CODE DIGITS**

The Academic Profile Code (APC) is a three-digit code which summarizes pertinent portions of an officer's prior college performance. The Naval Post-graduate School routinely generates APCs for officers of most Navy communities, usually within three years of commissioning. The three independent digits reflect an individual's cumulative grade-point average (QPR), exposure to, and performance in, calculus related mathematics courses, and exposure to, and performance in, selected science/engineering areas.

**First Digit**

The first digit indicates overall academic performance and is derived from the following table:

Code	QPR Range
0	3.60-4.00
1	3.20-3.59
2	2.60-3.19
3	2.20-2.59
4	1.90-2.19
5	0-1.89

(Failures and repeated courses are included in the QPR calculation.)

**Second Digit**

The second digit represents mathematical background according to the following criterion:

Code	Meaning
0	Significant post-calculus math with B or better average
1	Calculus sequence completed with B+ or better average
2	Calculus sequence completed with average between C+ and B
3	One calculus course with C or better
4	Two or more pre-calculus courses with B or better average
5	One pre-calculus with C or better grade
6	No pertinent college-level math with C or better grade

**Third Digit**

The third digit represents previous course coverage in science and technical fields.

Code	Meaning
0	Significant pertinent upper-division technical courses with B+ or better average
1	Significant pertinent upper-division technical courses average between C+ and B
2	Complete calculus-based physics sequence with B+ or better average
3	Completed calculus-based physics sequence with average between C+ and B
4	One calculus-based physics course with C or better grade
5	No pertinent technical courses

A first digit code of 0,1,2, or 3 (as appropriate) will be assigned only if transcripts provided exhibit at least one hundred semester hours or one hundred fifty quarter hours of actual graded classroom instruction. Grades of Pass/Fail, Credit/No Credit will not count toward the 100/150 hour requirement.

A technical code of 1 or 0 ordinarily is assigned only to an officer whose undergraduate major was Physics, Aeronautical, Electrical, Mechanical or Naval Engineering, or whose undergraduate technical major is consistent with the officer's designator.

**Example**

An APC of 221 indicates a total grade average for all college courses in the interval 2.60-3.19, a complete sequence in calculus-of-one-variable with a C+ or B average, and a major in physics or pertinent engineering area with upper-division courses with a C+ or B average.

**Threshold**

Each curriculum at the Naval Post-graduate School has a specified thresh-

old APC for admission. A list of these is given at the beginning of the section on programs. Officers with deficient APCs may qualify for entry into these curricula by completing suitable courses at any accredited civilian college. Transcripts (not grade reports) of work done at civilian schools must be forwarded to the Director of Admissions, Code 0145, Naval Postgraduate School, Monterey, CA 93943, to effect an APC change. The grades in all courses completed will be used to revise an officer's QPR. Only courses with B or better grades are used to upgrade either a Math Code or a Tech Code.

### Academic Counseling

The NAVPGSCOL provides academic counseling services as indicated below to assist officers in developing individual educational plans. Officers who have chosen specific curricula or who have been selected or detailed for graduate education in programs at NAVPGSCOL, are advised to contact the appropriate NAVPGSCOL curricular office listed in the Programs Section of this Catalog. Officers not yet selected for graduate education and seeking general information about the curricula offered at the School, or for general information on the fully-funded graduate education selection process, are advised to contact the Director of Admissions (Code 0145), NAVPGSCOL, or telephone (408) 646-3093/AV 878-3093.

### OTHER U.S. MILITARY OFFICES

Officers on duty with other branches of service are eligible to attend the Postgraduate School. Requests for admission or transcripts from individual officers should **not** be sent directly to the Naval Postgraduate School. They

should apply in accordance with the directives promulgated by the Department of the Army, Department of the Air Force, Commandant U.S. Marine Corps, or the Commandant U.S. Coast Guard, as appropriate.

### ALLIED COUNTRY MILITARY OFFICERS

Military officers from allied countries may be admitted to most curricula. Their admission is subject to availability of quotas assigned to each country. The procedures for application are contained in OPNAV INSTRUCTION 4950.1E. Correspondence must be processed through normal channels; requests from individual officers should **not** be sent directly to the Naval Postgraduate School. In addition to fluency in English, candidates must satisfy the academic standards for each curriculum as described in this catalog.

### CIVILIAN EMPLOYEES OF U.S. GOVERNMENT

A civilian employee of an agency of the United States Federal Government may be admitted for study upon request and sponsorship of the agency. Federal civilian employees are not required to pursue the curricula designed for officer-students as described in this catalog but instead determine, with the guidance of assigned academic counselors, the combination of courses that will best meet their needs.

A civilian who is expecting agency sponsorship should submit a written request for evaluation for admission at least four months prior to expected commencement of studies. A request should indicate the desired curriculum and degree intentions and be accompanied by a complete set of official transcripts of all previous college work. GRE and/or GMAT scores are not required but will be considered when included in the submission.

## GENERAL INFORMATION

---

Requests for admission should be directed to the Director of Admissions, Code 0145, Naval Postgraduate School, Monterey, CA 93943. Questions about available programs or admission procedures may be telephoned to (408) 646-3093 or Autovon 878-3093.

### TRANSFER OF CREDITS

Upon entry to the Naval Postgraduate School, each student's academic record will be evaluated for possible transfer of credit or for exemption from portions of the curricular program by validation of course work previously completed. Students may also utilize knowledge gained through self-study, experience of service-related education

to seek validation or credit for curricular courses by taking a departmental examination.

Twelve hours of graduate-level courses previously completed may be accepted for transfer credit. These include graduate-level courses taken after completion of the baccalaureate degree and those taken in the last term before award of the baccalaureate and certified to be in excess of degree requirements.

Questions on transfer credit may be directed by letter to the Dean of Academic Administration, Code 014, Naval Postgraduate School, Monterey, CA 93943, or telephone (408) 646-2391 or Autovon 878-2391.

Provost & Academic Dean  
**Harrison Shull, PhD**

## SCHOOL STRUCTURE AND ORGANIZATION

The Naval Postgraduate School was established and is funded by the Congress of the United States. It is administered as an activity within the Department of the Navy; consequently, the institution's governance and administration follow norms for civilian higher education as they are adapted to the Navy organization at large.

### GRADUATE EDUCATION REVIEW BOARD

A graduate Education Review Board, chaired by the Chief of Naval Operations and including the Vice Chief of Naval Operations, The Deputy Chief of Naval Operations (Manpower, Personnel and Training, OP-01), the Superintendent, Naval Postgraduate School and a representative from the Naval Systems Command (on a rotating basis) meets annually to provide policy guidance and direction for the Navy's graduate education program, reviews adequacy and stability of resources and student inputs, etc. Prior to this meeting, a separate Graduate Education Review Group, chaired by the Vice Chief of Naval Operations meets to review graduate education issues and identify matters of potential interest to the Graduate Education Review Board. The Graduate Education Review Group membership includes the principal warfare sponsors, principal subspecialty primary consultants and the Superintendent, Naval Postgraduate School.

### BOARD OF ADVISORS

The Board of Advisors is composed of distinguished professionals, consisting of highly qualified civilian educators, prominent citizens from business, the professions, and other vocations, and active and retired military officers. The purpose of the Board is to assist the Superintendent on strategic matters of the Navy's Graduate Education Programs and ad-

verse the Secretary of the Navy of their needs. In fulfilling this objective, the Board assesses the effectiveness with which the Naval Postgraduate School is accomplishing its mission and evaluates its future plans. Board members are appointed for two terms of two years by the Secretary of the Navy upon the recommendation of the Superintendent. Each appointment is renewable once for a second period of two years.

The Board meets annually at the Naval Postgraduate School, and submits a report of its recommendations to the Secretary of the Navy, via the Superintendent. Board members also serve on departmental academic review committees during the year and assist in other matters as requested by the Superintendent or the Secretary of the Navy.

### ADMINISTRATION

The Superintendent of the Postgraduate School is a flag officer of the line of the Navy. His principle assistant is the Provost/Academic Dean, who is the ranking member of the civilian faculty.

The Superintendent has command responsibility for accomplishment of the School's mission. The Provost/Academic Dean is the chief educational officer and is responsible to the Superintendent for all academic matters. He is appointed by the Secretary of the Navy upon the recommendation of a council of NPS senior personnel, chaired by the Superintendent. All other Deans report to the Provost/Academic Dean.

In addition to serving as the institution's president, the Superintendent is the academic coordinator for all graduate education programs in the Navy, and, as such, administers fully-funded graduate educational programs, both at the Naval Postgraduate School, and other service graduate schools, and civilian universities.

### ADMINISTRATIVE STAFF

Principle assistants to the Superintendent and Provost are the administrative staff, which consist of two captains of the line who serve as the Director of Programs and the Director of Military Operations and four faculty members who serve as Deans and Directors of academic functions. These currently are:

**DIRECTOR OF PROGRAMS: Hiller Sarepera**, Captain, U.S. Navy.

**DIRECTOR OF MILITARY OPERATIONS: John C. Cook, Jr.**, Captain, U.S. Navy.

**DEAN OF INFORMATION AND POLICY SCIENCE: Kneale Thomas Marshall**, Professor of Operations Research.

**DEAN OF SCIENCE AND ENGINEERING: Gordon Everett Schacher**, PhD, Professor of Physics.

**DIRECTOR OF RESEARCH: Gilbert T. Howard**, PhD, Professor of Operations Research.

The academic program organization is supervised by the Director of Programs, the Dean of Information and Policy Sciences, and the Dean of Science and Engineering, who collaborate to share jointly the responsibilities for planning, conducting and administering the several education programs.

### ACADEMIC DEPARTMENTS

Members of the faculty are organized into eleven Academic Departments

and three Interdisciplinary Academic Groups, each supervised by a Chairman. Over 80% of the teaching staff are civilians of varying professional rank and the remainder are military officers. Departments are grouped into two Divisions: Information and Policy Sciences and Science and Engineering. Deans supervise the academic affairs of their respective divisions. Chairmen of the Interdisciplinary Groups report to the Provost.

#### Division of Information and Policy Sciences

- Administrative Sciences
- Computer Science
- Mathematics
- National Security Affairs
- Operations Research

#### Division of Science and Engineering

- Aeronautics and Astronautics
- Electrical and Computer Engineering
- Mechanical Engineering
- Meteorology
- Oceanography
- Physics

#### Academic Groups

- Antisubmarine Warfare Command, Control and Communications
- Electronic Warfare
- Space Systems Operations

### CURRICULAR OFFICES

The Curricular Offices are organizational entities that are separate from, but interactive with, the Academic Departments in the educational operations of the School. The former are staffed by naval officers and civilian faculty members whose primary functions are threefold: (1) academic counseling and military supervision of

officer students; (2) curriculum development and management to insure attainment of professional and academic objectives, and (3) liaison with curricular sponsor representatives.

Students are grouped in accordance with their curricular programs and are assigned to one of eleven Curricular Offices for program supervision and for academic and professional counseling.

Students in each curricular group pursue similar or closely related curricula. Each Curricular Office is staffed by one or more military officers of suitable experience and rank and one or more Academic Associates. The latter are faculty members selected for this part-time assignment. They are responsible to the Division Deans for the integrity and academic soundness of the academic features of the Curricular Office operations. Curricular Officers ensure their curricula meet Navy needs, and ensure the proper administrative operation of their respective offices. They report to the Director of Programs, who is the senior military officer under the Superintendent responsible for all military personnel assigned to curricular or academic duties.

Officer students are grouped into the following curricular program areas:

- Administrative Sciences
- Aeronautical Engineering
- Air-Ocean Sciences
- Antisubmarine Warfare
- Command, Control and Communications (C3)
- Computer Technology
- Electronics and Communications
- National Security Affairs/  
Intelligence
- Naval Engineering
- Operations Analysis
- Weapons Engineering

### **FACULTY ORGANIZATIONS**

The faculty plays a role in school-wide policy-making and planning through various established Councils.

The Faculty Council functions as a primary faculty-input advisory vehicle to the Provost and Superintendent. The Academic Council, a representative body of each academic department and group, has cognizance over all academic standards and degree-granting considerations. The Research Council reviews research proposals for, and determines allocation of, Foundation Research Program funds; the Computing Advisory Board and the Library Council function similarly. The composition of each Council and its specific functions are described in the NPS Organization and Regulations Manual.

### **STUDENT COUNCIL**

The Officer Student Advisory Council (OSAC) is an organized communication mechanism between the NPS students and the NPS administration. It functions in an advisory capacity in matters involving curricula, facilities, procedures and policies deemed worthy of attention. The OSAC is comprised of thirty-five student representatives, and membership is distributed among the curricula by student population, with each curriculum having at least one representative.

The OSAC is headed by a Chairman, Vice Chairman, and Secretary elected by members of the Student Council. Officers serve for a six-month period.

Besides a Steering Committee and an Election Committee, Student Council Committees are formed to correspond with those NPS committees or councils which have an impact or effect on the student body and which can give or receive benefit from such representation. OSAC representation is included in the following NPS standing Councils and Committees:

- Academic Council
- Faculty Council
- Library Council
- Exchange/Bookstore Committee

## GENERAL INFORMATION

---

Recreation Committee  
O'Club Committee  
Public Works/Housing Committee  
Medical Committee

Student Council meetings are held at least once a month and the minutes of these meetings are distributed to interest offices within the School.

## SPECIAL FACILITIES

### DUDLEY KNOX LIBRARY

The Library embraces an active collection of 365,000 books, bound periodicals, government documents, pamphlets, and other materials in hard copy and microform; 530,000 research reports in hard copy and microform, and over 1,800 periodicals and other serial publications currently received. These materials parallel the School's curricular fields of engineering, physical sciences, managerial sciences, operations research, naval sciences, and national security affairs.

The Reader Services Division provides the open literature sources, such as books, periodicals and journals, indexes and abstracting services, pamphlet materials and newspapers. It provides access to more than 400 computer databases in the curricular fields of interest by means of DIALOG (Lockheed Informations Systems), NEXIS (Mead Data Central), and RLIN (Research Libraries Group). It furnishes facilities for microform reading and printing and for reproduction of printed matter. It borrows publications not held in its collection from other libraries.

The Research Reports and Classified Materials Division is the principal repository for research documents received by the School. It houses the Library's classified and unclassified research reports in hard copy and microfiche. A machine information storage and retrieval system that utilizes the School's computer facilities is available for bibliographic searches of research and development documents held by the division. an SDI (Selective Dissemination of Information) Service is also available. The Division is able to perform, via its own remote terminal, computer searches of the data banks of the Defense Technical Information Center in Alexandria, Virginia, and thus to provide rapid and efficient access to the 1,000,000 plus documents held by the Center. It also accesses the CIRC (Central Information Reference and Control) Systems and NASA/RECON.

### W.R. CHURCH COMPUTER CENTER

The many services of the Computer Center are available free to all faculty,

staff, and students of the School for use in instruction, research, or administrative activities. Round-the-clock support is provided on a network of three IBM computers, specifically a 3033 Model AP (a dual-processor configuration with 16 Mbytes of processor storage), a 3033 Model U with 16 Mbytes, and a 4381-13 with 16 Mbytes. The systems share all input/output equipment and auxiliary storage devices, including four paging drums, IBM 3380 and 3350 Direct Access Storage, IBM 3420-8 Tape Drives (6,250 bpi) and IBM 3480 Tape Cartridge Units and an IBM 3800-3 page printer.

The academic year, 1988-89, will see the completion of the first phase of a multi-year program to upgrade, expand and better integrate the various service facilities including the replacement of the IBM 3033s with a 3090-class system, acquisition of a mini-supercomputer and interconnection of existing computers and LANs in the academic departments via a campus backbone network. Off-campus communications, presently via BITNET and MILNET/ARPANET, will be expanded to include NSFnet.

The principal mode of access is via 650 IBM 3270 type terminals and personal computers located in public spaces and private offices in the academic buildings and attached by coaxial cable to the computer in Ingersoll Hall. Full micro-to-main-frame communications support is provided for hard-wired or dial-up linkage. In addition, there are 20 full graphic displays available for public use. The system supports two major operating systems: MVS (Multiple Virtual Systems) that runs batch-processing jobs and VM/SP (Virtual Machine) and CMS (Conversational Monitor System) that provides interactive support. The extensive programming facilities include VS FORTRAN, WATFIV, VS COBOL, WATBOL, PL/1 Optimizer,

BASIC, APL2, PASCAL, LISP and C. Most languages are available in both interactive and batch-processing modes.

The School has a heavy commitment to computers consistent with their present and future role in military operations. All of the academic curricula have been affected by the presence of computers on campus. All graduate students take at least one course in computer science. They are introduced to computers early in their curricula at the Naval Postgraduate School and encouraged to use them in subsequent course work and research.

The Computer Center supports a wide variety of specialist courses in computer science offered by the Departments of Computer Science, Electrical & Computer Engineering, Mathematics, Operations Research and Administrative Sciences.

The professional staff provides short courses, consulting services in application programming, systems programming and problem formulation assistance for students and faculty members. They participate in an active research and development program directed primarily towards improving the present operational environment or introducing new hardware and software facilities to users. Current projects include work on systems measurement, improvement of operating systems, graphical data processing, time-sharing facilities, micro-to-mainframe communications and networking.

In addition to these facilities, virtually all of the academic departments have developed computing facilities and/or laboratories, mini- and micro-processor based, which provide computing support or are dedicated to specific areas of research. Micro-computers are widely used as stand-alone development tools or as processing elements imbedded in more complex systems. Many students have purchased their own personal computer.

## SPECIAL PROGRAMS

### FEDERAL CIVILIAN EDUCATION

Any civilian employee of the United States Government is eligible to participate in the program of the School. The individual's employing agency is expected to meet the tuition expense for regular on-campus enrollment. Costs associated with participation in the Continuing Education Program are determined on an ad hoc basis.

Programs available to civilian students can be classified as follows:

**Regular Curricula:** The School's programs for officers are designed to meet the requirements of the services for specific education. The contents usually exceed the requirements for a graduate degree since the service's requirements, rather than degree requirements, determine the scope of each program. Civilian students may enter any curriculum at the point at which they are qualified and complete the curriculum along with regular officer students. The programs section describes the available curricula.

**Degree Programs:** For civilian students, programs may be designed which lead to the award of a graduate degree while meeting the educational goals of each individual. In order to minimize the residency requirement, an off-campus preparatory program may be developed in consultation with a School advisor. This may include self-study courses from the School or courses at a local university. If the available time in residence, typically four calendar quarters or less, is insufficient to complete degree requirements, the thesis-project portion of the program may be completed off-campus.

**Non-Degree Programs:** Civilian employees may desire to pursue a program for professional advancement without a degree objective. Any of the School's regular courses are available for such efforts. For groups of employees from an agency, special courses can be offered to meet particular requirements, provided the demand is in an area of expertise of the School.

### Admission:

There are no formal requirements for enrollment in the Continuing Education Program. For admission to either a degree or a non-degree program, the minimum qualification is an accredited baccalaureate degree with appropriate preparation for the proposed program. As described under Admissions Procedures in this Catalog, the School will require submission of official transcripts covering all college work completed to date.

### Catalogs:

The point of contact for requests for:

- Naval Postgraduate School catalogs
- admission to resident study programs

is Director of Admissions, Code 0145, Naval Postgraduate School, Monterey, CA 93943-5000, or telephone (408) 646-3093/AV 878-3093.

# CURRICULAR OFFICES AND PROGRAMS

The Curricular Office is an organizational entity unique to the Naval Postgraduate School. It supports the School's mission and objectives by providing the structure for the development, maintenance and updating of curricular programs which meet both Navy and Department of Defense needs and academic requirements. The office is composed of a Curricular Officer with possible assistants, one or more Academic Associates, and clerical personnel. The Curricular Officer is a military officer of suitable rank and experience, and the Academic Associate is a faculty member who is familiar with the curriculum. This team performs the following functions:

- provides liaison with the curricular sponsor
- develops and manages each curriculum
- supervises and counsels enrolled students
- provides counseling for future students

The Curricular Officer/Academic Associate team work with the curricu-

lum sponsors to develop educational skill requirements and update the curriculum courses to ensure that graduates are properly educated to face the challenges of their future subspecialty utilization tours.

Curricular Officers and Academic Associates also review the records of all prospective students. Following the student's arrival, they provide both academic and professional counseling as required. This team is responsible for ensuring that each individual's academic program satisfies education skill requirements and is consistent with the individual's educational background.

Prospective students are encouraged to communicate with the cognizant Curricular Officer by letter or telephone for counseling regarding particular off-campus courses which may be required to qualify for enrollment.

## CURRICULAR OFFICES

Each service identifies military billets that require specific graduate level education for successful performance. More than 6,000 subspecialty coded billets are presently identified in the Navy. Quotas for officer inputs to graduate education programs are generated annually to ensure that a sufficient number of officers with subspecialty codes will be available to meet current and projected billet requirements. Sponsors such as the Naval Sea Systems Command and Naval Air Systems Command identify the skill requirements for subspecialty coded billets, and the Naval Postgraduate School administers curricular programs to meet the promulgated skill requirements. Curriculum titles, minimum threshold APC levels, subspecialty codes and degree titles are listed below by ascending curriculum number.

Curriculum Number	Curriculum Title	Admission APC	Subspecialty Code	Degree
360	Operations Analysis	324	XX42P	MS Operations Research
361	Operational Logistics	324	XX43P	MS Operations Research

This section of the catalog includes descriptions of all the curricula offered at the Naval Postgraduate School which are summarized in the Table below. Specific academic requirements for enrollment are contained in each curriculum segment.

Students entering any of the technical curricula normally are ordered to a six-week mathematics refresher course. It begins in the seventh week of each quarter. This course is not designed to teach math, but rather to reacquaint students with calculus. During this refresher, students also take an introductory course in set and logic theory and a programming course in BASIC on desk-top microcomputers.

Some officers are ordered to Engineering Science (Curriculum 460) if they require more preparation for entering one of the technical curricula. This program is either one or two quarters long and includes calculus, physics, and introductory computer courses.

## ADMINISTRATIVE SCIENCES PROGRAM

### Curricular Officer

John E. Jackson, CDR, SC, USN,  
Code 36, Ingersoll Hall, Room 219,  
(408) 646-2536, AV 878-2536.

### TRANSPORTATION LOGISTICS MANAGEMENT CURRICULUM 813

This curriculum is an interdisciplinary program which integrates mathematics, accounting, economics, behavioral science, management theory, operations/systems analysis, and a subspecialty concentration into an understanding of the process by which the defense mission is accomplished. These programs are designed to provide the officer with fundamental interdisciplinary techniques of quantitative problem-solving methods, behavioral and management science, economic analysis, and financial management; furthermore, it is intended to provide the officer with a Navy/Defense Systems oriented graduate management education and to provide the officer with the specific functional skills required to effectively manage in this subspecialty area.

### REQUIREMENTS FOR ENTRY

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry.

Officers from the U.S. Services, as well as all others, start the curriculum with widely varied academic backgrounds. Each student's prior academic work and related military experience is evaluated for courses previously completed and applicable to the student's curriculum so that academic credits may be transferred. Validation or credit by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

### TRANSPORTATION LOGISTICS MANAGEMENT SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Material Movement Subspecialist with a subspecialty code of 1304P. The Curriculum Sponsor is Naval Supply Systems Command Headquarters.

### Typical Jobs in this Subspecialty:

Transportation Systems  
CINCLANTFLT, Norfolk, VA  
Transportation Logistics  
CINCUSNAVEUR, London  
Deputy Chief  
Military Traffic Command  
Director of Material Department  
Naval Supply Depot/Naval  
Supply Center Worldwide  
Director of Storage Division  
Naval Supply Depot/Naval  
Supply Center Worldwide

**Entry Date:** Transportation Logistics Management is a six quarter course of study with a single entry date in July. If further information is needed, contact the Academic Associate for this curriculum or the Curricular Officer.

### Academic Associate:

Alan W. McMasters, Professor,  
Code 54Mg, Ingersoll Hall, Rm. 209,  
(408) 646-2678, AV 878-2678.

**Degree:** Requirements for the degree Master of Science in Management are met as a milestone en route to satisfying the skill requirements of the curricular program.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

- MN 2150 (4-0) Financial Accounting
- MN 2031 (4-0) Economic Decision Making
- MN 3333 (4-0) Managerial Communication Skills
- MA 2300 (5-0) Mathematics for Management
- IS 0123 (0-2) Computer Skills Development

**Quarter 2**

- MN 3161 (4-0) Managerial Accounting
- MN 3140 (4-0) Microeconomic Theory
- MN 3373 (4-0) Transportation Management I
- OS 3105 (4-0) Probability & Statistics

**Quarter 3**

- MN 3301 (4-0) Systems Acquisition & Project Management
- MN 3172 (4-0) Public Policy Processes
- MN 3105 (4-0) Organization & Management
- OS 3106 (4-0) Probability & Statistics II

**Quarter 4**

- MN 4373 (4-0) Transportation Management II
- MN 4145 (4-0) Policy Analysis
- IS 3183 (4-0) Management Information Systems
- OS 3006 (4-0) Operations Research for Management

**Quarter 5**

- MN 3377 (4-0) Inventory Management
- MN 4155 (4-0) Operational Auditing
- MN 0810 Thesis
- MN 0810 Thesis

**Quarter 6**

- MN 4105 (4-0) Management Policy
- MN 3371 (4-0) Contracts Management & Administration
- MN 4154 (4-0) Financial Management in The Armed Forces
- MN 0810 Thesis

**TRANSPORTATION  
MANAGEMENT  
CURRICULUM 814**

The objectives of this curriculum are to prepare officers for logistics system positions within the Navy, and to emphasize the worldwide transportation aspects of it. Graduate logistics courses cover topics such as the transportation system within CONUS, warehouse siting, materials management, production management, inventory management (both Navy and private sector), materials handling, purchasing and physical distribution. Students take additional courses in transportation in the private sector and military transportation in support of contingencies, as well as options in corporate financial management, production management or logistics engineering.

**TRANSPORTATION  
MANAGEMENT  
SUBSPECIALTY**

Completion of this curriculum qualifies an officer as a Transportation Management Subspecialist with a subspecialty code of XX35P. The Curriculum Sponsor is Military Sealift Command Headquarters.

**Typical Jobs in this Subspecialty:**

- Executive Officer
  - Military Sealift Command Overseas: Guam, Okinawa, Korea, MED
- Executive Officer
  - Military Sealift Command Office, CONCUS: Seattle, New Orleans, San Diego, Anchorage
- Tanker Control Officer
  - Military Sealift Command

**REQUIREMENTS FOR ENTRY**

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry.

Officers from the U.S. Services, as well as all others, start the curriculum with widely varied academic backgrounds. Each student's prior academic work and related military experience is evaluated for courses previously completed and applicable to the student's curriculum so that academic credits may be transferred. Validation or credit by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

**Entry Date:** Transportation Management is a six quarter course of study with a single entry date in July. If further information is needed, contact the Academic Associate for this curriculum or the Curricular Officer.

**Academic Associate:**

Alan W. McMasters, Professor,  
Code 54Mg, Ingersoll Hall, Rm. 209,  
(408) 646-2678, AV 878-2678.

**Degree:** Requirements for the degree Master of Science in Management are met as a milestone en route to satisfying the skill requirements of the curricular program.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

- MN 2150 (4-0) Financial Accounting
- MN 2031 (4-0) Economic Decision Making
- MN 3333 (4-0) Managerial Communication Skills
- MA 2300 (5-0) Mathematics for Management
- IS 0123 (0-2) Computer Skills Development

**Quarter 2**

- MN 3161 (4-0) Managerial Accounting
- MN 3140 (4-0) Microeconomic Theory
- MN 3373 (4-0) Transportation Management I
- OS 3105 (3-1) Statistical Analysis for Management I

**Quarter 3**

- MN 3372 (4-0) Material Logistics
- MN 3172 (4-0) Public Policy Processes
- MN 3105 (4-0) Organization & Management
- OS 3106 (3-1) Statistical Analysis for Management II

**Quarter 4**

- MN 4373 (4-0) Transportation Management II
- MN 4145 (4-0) Policy Analysis

- MN 3301 (4-0) Systems Acquisition & Project Management
- MN 0810 Thesis Elective

## ACQUISITION AND CONTRACT MANAGEMENT CURRICULUM 815

The Acquisition and Contract Management Curriculum is an interdisciplinary program which integrates mathematics, accounting, economics, finance, behavioral science, management theory, operations/systems analysis, and specific courses in acquisition and contracting. Inputs from the Navy are from the Supply Corps and civilians in the 1102 series. Marine Corps, Army and Coast Guard officers also participate in the program. The curriculum is designated to provide officers with the skills to serve effectively in hardware systems procurement offices, field procurement offices, contract administration offices, and contracting policy support offices.

The following are a sample of the educational skill requirements of the curriculum as delineated by the curriculum sponsor:

Develop, implement and coordinate acquisition strategies, policies and plans.

Understand business finance and accounting; evaluate contractor proposals and capabilities. Knowledge of system life cycle, economic analysis.

Have an in-depth comprehension of contract types.

Ability to evaluate requirements, specifications, bids, proposals and contractor performance.

Determine rights/obligations for settlement of controversies on government contracts.

Negotiate contracts and contractual issues.

### REQUIREMENTS FOR ENTRY

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry.

Officers from the U.S. Services, as well as all others, start the curriculum with widely varied academic backgrounds. Each student's prior academic work and related military experience is evaluated for courses previously completed and applicable to the student's curriculum so that academic credits may be transferred. Validation or credit by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

### ACQUISITION AND CONTRACT MANAGEMENT SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Acquisition and Contract Management Subspecialist with a subspecialty code of 1306P. The Curriculum Sponsor is Naval Supply Systems Command Headquarters.

#### Typical Jobs in this Subspecialty:

Contracting Officer

Ships Parts Control Center,  
Mechanicsburg, PA; Aviation  
Supply Office, Philadelphia, PA

Director of Contracts

Naval Supply Depots, Naval  
Supply Centers, Navy Labora-  
tories, Navy Regional Contracting  
Centers

Procuring Contracting Officer,  
(PCO)

Hardware Systems Commands  
(NAVAIR, NAVSEA, SPAWAR),  
Washington, DC

Business/Financial Manager  
(B/FM)

Hardware Systems Commands  
(NAVAIR, NAVSEA, SPAWAR),  
Washington, DC

Contracts and Business Policy

Staff of Asst. Secretary of the  
Navy (Shipbuilding and Logistics)  
Staff of Under Secretary of De-  
fense (Acquisition)

Administrative Contracting Officer  
(ACO)

Defense Contract Administration  
Services (DCAS)

Naval Plant Representative Office  
(NAVPRO)

Superintendent, Shipbuilding, Conversion and Repair (SUPSHIP)

**Entry Dates:** Acquisition and Contract Management is a six quarter course of study with entry dates in January and July. If further information is needed, contact the Academic Associate for this curriculum or the Curricular Officer.

**Academic Associate:**

David V. Lamm, Assoc. Professor,  
Code 54Lt, Ingersoll Hall, Room 248,  
(408) 646-2775, AV 878-2775.

**Degree:** Requirements for the degree Master of Science in Management are met as a milestone en route to satisfying the educational skill requirements of the curricular program.

**ADMINISTRATIVE SCIENCES  
(NON USN)  
CURRICULUM 817**

These programs are designed to provide the officers with fundamental interdisciplinary techniques of quantitative problem-solving methods, behavioral and management science, economic analysis, and financial management and to enable the officers to evaluate the written research, study, and analysis product of others throughout their careers. The curriculum will further provide the officers with the specific functional skills required to effectively manage.

These curricula are interdisciplinary programs which integrate mathematics, accounting, economics, behavioral science, management theory, operations/systems analysis, and a subspecialty concentration area into

an understanding of the process by which the defense mission is accomplished. Specialty concentration areas are specified by ordering officers into a specific curriculum.

While Allied students are free to choose any of the specific management curricula available, nearly half choose the more general Administrative Sciences International Curriculum 817. The 817 curriculum allows students to design a program of course work that is specifically useful in effectively managing in the culture uniquely characteristic of their own country's military system. The student may elect to specialize in the relevant portion of a functional area such as financial, logistics, human resources and organization, or manpower and personnel analysis. Or, the student may choose to follow a general management program which would include an overall balance of courses from many functional areas.

**REQUIREMENTS FOR ENTRY**

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry.

Officers from the U.S. Services as well as Allied officers, and DoD employees, start the curriculum with widely varied academic backgrounds. Each student's prior academic work and related military and civilian experience is evaluated for courses previously completed and applicable to the student's curriculum so that academic credits may be transferred. Validation or credit by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

**Entry Dates:** Administrative Sciences for USA, USCG, USMC, DOD civilians and allied officers is a six quarter course of study with entry

dates in January and July. If further information is needed, contact the Academic Associate for this curriculum or the Curricular Officer.

**Academic Associate:**

USA - Management Sciences

**SYSTEMS INVENTORY  
MANAGEMENT  
CURRICULUM 819**

This curriculum emphasizes the management of Navy owned inventories at all levels. 819 students take additional courses in general inventory model development and the specific details of the Navy's inventory models, spanning the three levels of wholesale, intermediate and retail customer support. Officers are responsible for developing procedures for establishing, maintaining and controlling inventories of material, distributing that material to the Navy customer, and developing the budgets for financing these inventories.

The Systems Inventory Management curriculum is interdisciplinary, integrating mathematics, accounting, economics, management theory, operations analysis, and the specialty concentration into an understanding of the process by which the defense mission is accomplished.

**REQUIREMENTS FOR ENTRY**

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry.

Officers from the U.S. Services as well as all others, start the curriculum with widely varied academic backgrounds. Each student's prior academic work and related military experience is evaluated for courses previously completed and applicable to the student's curriculum so that academic credits may be transferred. Validation or credit by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

**Degree:** Requirements for the degree Master of Science in Management are met as a milestone en route to satisfying the skill requirements of the curricular program.

**SYSTEMS INVENTORY  
MANAGEMENT  
SUBSPECIALTY**

Completion of this curriculum qualifies an officer as a Systems Inventory Management Subspecialist with a subspecialty code of 1302P. The Curriculum Sponsor is Naval Supply Systems Command Headquarters.

**Typical Jobs in this Subspecialty:**

- Inventory Control Management
  - Naval Supply Depot/Naval Supply Center
- Stock Control
  - Navy Shipyards
- Head Inventory Control Point
  - Polaris Material Office, Bremerton/Charleston
- Director of Program Support Office
  - Ship Parts Control Center, Mechanicsburg, PA

## **MATERIAL LOGISTICS SUPPORT MANAGEMENT CURRICULUM 827**

The Material Logistics Support Management curriculum emphasizes all of the aspects for providing integrated logistics support of weapons systems. Besides study in mathematics, accounting, economics, behavioral science, management theory and operations analysis, the curriculum delves into production management, inventory management, integrated logistic support, procurement and contract administration, systems acquisition and project management. Skills resulting from the curriculum will prepare those responsible for managing the various segments of a military system's life cycle from initial planning for support to fielding the system, through sustaining operations to phaseout.

## **MATERIAL LOGISTICS SUPPORT MANAGEMENT SUBSPECIALIST**

Completion of this curriculum qualifies an officer as a Material Logistics Support Management Subspecialist with a subspecialty code of XX32P. The Curriculum sponsor is Naval Air Systems Command Headquarters.

### **Typical Jobs in this Subspecialty:**

Aircraft Intermediate Maintenance  
Naval Air Stations  
Project Management Staff  
Naval Air Systems Command,  
Washington, DC  
Integrated Logistics Support  
Coordinator for Operational Support  
Naval Air Systems Command,  
Washington, DC  
Director of Receiving  
Naval Supply Depot/Naval  
Supply Center  
Director of Storage  
Naval Supply Depot/Naval  
Supply Center

**FINANCIAL MANAGEMENT CURRICULUM 837**

The objective of the Financial Management Curriculum is to prepare officers for business and financial positions within the Navy. Financial Managers assist the Navy's decision-making processes at all levels by providing accurate, timely, and relevant information. They are concerned with the optimal allocation of human, physical, and financial resources to achieve the Navy's goals and objectives while assuring efficient and effective expenditure of public funds.

Graduate courses cover topics such as financial reporting standards, cost standards, cost analysis, budgeting, internal control, financial auditing, operational auditing, management planning and control systems, quantitative techniques used in planning and control, and the Planning Programming and Budgeting System used

within the Department of Defense.

Graduates of the Financial Management Curriculum will be prepared for assignment to positions in budgeting accounting, business and financial management, and Internal Control and Auditing.

**REQUIREMENTS FOR ENTRY**

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry.

Officers from the U.S. Services, as well as all others, start the curriculum with widely varied academic backgrounds. Each student's prior academic work and related military experience is evaluated for courses previously completed and applicable to the student's curriculum so that academic credits may be transferred. Vali-

dition or credit by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

**Degree:** Requirements for the degree Master of Science in Management are met en route to satisfying the skill requirements of the curricular program.

**FINANCIAL MANAGEMENT  
SUBSPECIALTY**

Completion of this curriculum qualifies an officer as a Financial Management Subspecialist with a subspecialty code of XX31P. The Curriculum Sponsor is OP-92, Fiscal Management Division.

**Typical Jobs in this Subspecialty:**

- Comptroller  
Naval Air Stations
- Budgeting  
Commander, Naval Medical Command, Washington, DC
- Accounting  
Commander, Naval Medical Command, Washington, DC

- Budget Officer  
Commander, Naval Air Forces Atlantic, Norfolk, VA
- Comptroller  
Naval Supply Depots/ Naval Supply Centers
- Fiscal Officer  
Naval Supply Depots/Naval Supply Centers
- Public Works Officer  
Weapons Stations, CONUS
- Cost Analysis  
Office of Secretary of the Navy, Washington, DC
- Special Assistants  
Program Planning Office (NAVY)  
Fiscal Management Division (OP-92)

**Entry Dates:** Financial Management is a six quarter course of study with entry dates in January and July. If further information is needed, contact the Academic Associate for this curriculum or the Curricular Officer.

**Academic Associate:**

James M. Fremgen, Professor,  
Code 54Fm, Ingersoll Hall, Rm. 301,  
(408) 646-2644, AV 878-2644.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

- MN 2150 (4-0) Financial Accounting
- MN 2031 (4-0) Economic Decision Making
- MN 3333 (4-0) Managerial Communication Skills
- MA 2300 (5-0) Mathematics for Management
- IS 0123 (0-2) Computer Skills Development

**Quarter 2**

- MN 3161 (4-0) Managerial Accounting

## **MANPOWER, PERSONNEL AND TRAINING ANALYSIS CURRICULUM 847**

Officers enrolled in the Manpower/Training Analysis (MPTA) curriculum at the Naval Postgraduate School undertake the challenge of an academic program designed to fill the leadership roles in military manpower management. The XX33 Subspecialty has primary responsibility for developing and analyzing policies to ensure that the Navy is recruiting, training, utilizing and retaining personnel in the most efficient and effective ways possible. MPTA is an extremely analytical curriculum intended to develop skills necessary to perform and evaluate manpower analyses. As such, the curriculum emphasizes mathematical, statistical, and other quantitative methods. Successful completion of the curriculum yields an officer skilled in conducting manpower policy analysis.

The areas covered in the MPTA curriculum include an understanding of MPT policy development, compensation systems, productivity analysis, enlistment supply and retention models, manpower training models, manpower requirements determination processes, career mix, enlistment incentives, reenlistment incentives, training effectiveness measures and hardware/manpower trade-offs. Students gain familiarity with current models and methods of MPT analysis as well as military MPT organizations and issues.

### **REQUIREMENTS FOR ENTRY**

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. Additional preparation in calculus and statistics is considered very advisable. An APC of 345 is required for entry.

Prospective students electing MPTA as a subspecialty must be adequately prepared by their undergraduate curriculum and comfortably oriented to a quantitatively rigorous graduate curriculum.

Officers from the U.S. Services, as well as all others, start the curriculum with widely varied academic backgrounds. Validation by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

**Degree:** Requirements for the degree Master of Science in Management are met as a milestone en route to satisfying the skill requirements of the curricular program.

## **MANPOWER, PERSONNEL AND TRAINING ANALYSIS SUBSPECIALTY**

Completion of this curriculum qualifies an officer as a Manpower, Personnel and Training Analysis Subspecialist with a subspecialty code of XX33P. The Curriculum Sponsor is OP-11, Total Force Training and Education Division.

### **Typical Jobs in this Subspecialty:**

Head, Ship Manpower Requirements Section

Deputy Chief of Naval Operations (Manpower, Personnel & Training)

Director Total Force Programming/Manpower Division OP-12, Washington, DC

Programmed Objective Memorandum (POM) Operations

Deputy Chief of Naval Operations (Manpower, Personnel & Training)

Director Total Force Programming/Manpower Division, OP-12, Washington, DC

Manager (OP-12A)

Deputy Chief of Naval Operations (Manpower, Personnel & Training)

Director Total Force Program-  
 ming/Manpower Division  
 OP-12, Washington, DC  
 Total Force Mobilization Plans  
 Branch  
 Deputy Chief of Naval Operations  
 (Manpower, Personnel & Training)  
 Director Military Personnel Policy  
 Division (OP-134G),  
 Washington, DC  
 Head, Officer Procurement Plans  
 Section (OP-13OD)

**Entry Dates:** Manpower, Personnel &  
 Training Analysis is a six quarter  
 course of study with entry dates in Jan-  
 uary and July. If further information is  
 needed, contact the Academic Associ-  
 ate for this curriculum or the Curricu-  
 lar Officer.

**Academic Associate:**

Stephen L. Mehay, Professor  
 Code 54Mp, Ingersoll Hall, Rm. 246,  
 (408) 646-2643, AV 878-2643.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

- MN 2031 (4-0) Economic Decision Making
- MN 2150 (4-0) Financial Accounting

**Quarter 6**

- IS 3183 (4-0) Management Information Systems
- MN 4105 (4-0) Management Policy
- MN 2114 (0-2) Seminar in MPTA Issues IV
- MN 0810 Thesis (Curriculum Option)

## AERONAUTICAL ENGINEERING PROGRAMS

### Curricular Officer:

James M. Daniel, CDR, USN,  
Code 31, Halligan Hall, Room 133,  
(408) 646-2491, AV 878-2491.

### AERONAUTICAL ENGINEERING AND AERONAUTICAL ENGINEERING WITH AVIONICS CURRICULA 610 & 611

The Aeronautical Engineering Programs are designed to meet the specific needs of the Navy's Operational Technical Managerial System (OTMS) for technical managers with a broad-based graduate education in Aeronautical Engineering. While an undergraduate degree in engineering is preferred, special preparatory programs can accommodate officers with widely varying academic backgrounds.

The Aeronautical Engineering Programs are designed to give the student a broad technical and engineering education in the four principal areas of aeronautics: gas dynamics, flight dynamics, propulsion, and flight structures. Additionally, officers receive graduate level instruction in aircraft/missile design and aero-computer science. Students in the 611 Curriculum receive additional emphasis on avionics systems. The programs are divided into preparatory, graduate and advanced graduate phases. The preparatory phase is tailored to each officer's background and is programmed for minimum time consistent with capability. After the preparatory phase, a common graduate core is completed by both the 610 and 611 students. This phase includes advanced studies in propulsion, aerodynamic analysis, structural analysis and stability and control. During the advanced graduate phase, all students receive in-depth graduate coverage through advanced electives in areas of their choice including flight dynamics,

gas dynamics, propulsion and structures. Students in Curriculum 611 receive advanced studies in guidance and control, radar systems and electronic warfare.

**Entry Dates:** Aeronautical Engineering is an eight quarter course of study with entry dates in April and October. Those requiring the Engineering Science Curriculum will have their time of arrival adjusted to accommodate it. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

### Academic Associate:

Gerald H. Lindsey, Professor,  
Code 67Li, Halligan Hall, Room 223,  
(408) 646-2808, AV 878-2808.

**Degree:** Requirements for the degree Master of Science in Aeronautical Engineering are met as a milestone en route to satisfying the skill requirements of the curricular programs.

### REQUIREMENTS FOR ENTRY

A baccalaureate degree, or its equivalent, with an above average QPR, preferably in engineering or the physical sciences, is required. In addition, Mathematics through differential and integral calculus, with above average grades and completion of a calculus based physics sequence with above average grades is also required. An APC of 323 is the requirement for direct entry, but the Engineering Science Program (Curriculum 460) is available for candidates who do not meet all the admission requirements for direct entry. The required APC for entry via Curriculum 460 is 334.

**AERONAUTICAL ENGINEERING  
SUBSPECIALTY**

Completion of this curriculum qualifies an officer as an Aeronautical Engineering Subspecialist with a subspecialty code of XX71P. The Curriculum Sponsor and primary consultant is the Naval Air Systems Command.

**Typical Jobs in this Subspecialty:**

Project Officer - Power Plants  
Naval Air Systems Command  
Weapons Systems Manager  
Naval Air Rework Facility,  
Pensacola, FL

Commanding Officer  
Naval Plant Representative  
Office, Stratford, CT  
Attack Aircraft Class Desk  
COMNAVAIRLANT, Norfolk,  
VA  
Aeronautical Engineer  
Defense Nuclear Agency Head-  
quarters  
Instructor, Aeronautical Engineer  
U.S. Naval Academy  
Annapolis, MD  
Deputy Project Manager  
for the E-2  
Naval Air Systems Command  
VP Program Director  
Naval Air Development Center

## NPS/TPS COOPERATIVE PROGRAM

A Program, which combines portions of the 610 curriculum at the NPS Monterey with the completed U.S. Naval Test Pilot School syllabus is currently available to selected officers with strong undergraduate engineering backgrounds. After the completion

of four quarters of study at NPS, selectees proceed to Patuxent River for the full Test Pilot School Curriculum. This NPS/TPS Cooperative Program results in a test pilot designation, XX73-G, the Aeronautical Engineering subspecialty code XX71P and award of the Master's degree in Aeronautical Engineering at the completion of test pilot school.

## TYPICAL COURSE OF STUDY

### Quarter 1

- MA 2047 (4-0) Linear Algebra & Vector Analysis
- MA 2121 (4-0) Differential Equations
- MS 3201 (3-2) Materials Science & Engineering
- ME 2440 (3-0) Modern Methods of Engineering Computation

## AIR-OCEAN SCIENCES PROGRAMS

### Curricular Officer

Charles K. Roberts, CAPT, USN  
Code 35, Root Hall, Room 216,  
(408) 646-2044, AV 878-2044.

### METEOROLOGY CURRICULUM 372

This curriculum will provide qualified non-USN personnel with a sound understanding of the science of meteorology and will develop the technical expertise to provide, and utilize meteorological and oceanographic data in support of all aspects of military operations.

### REQUIREMENTS FOR ENTRY

The program is only open to officers of the U.S. Navy as a PhD program.

A baccalaureate degree with completion of mathematics through differential and integral calculus and a minimum of one year of college physics is

required. An APC of 323 is required for direct entry. The Engineering Science Program (Curriculum 460) is available for candidates who do not meet all admission requirements for direct entry.

**Entry Dates:** Meteorology is a seven quarter course of study with preferred entry dates in April and October. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

### Academic Associate:

Robert L. Haney, Professor,  
Code 63Hy, Root Hall, Room 244,  
(408) 646-2308, AV 878-2308.

**Degree:** Master of Science in Meteorology.

### TYPICAL COURSE OF STUDY

#### Quarter 1

Track Option

**AIR-OCEAN SCIENCES  
CURRICULUM 373**

Completion of this curriculum will provide a thorough understanding of the air-sea environment and will develop the technical expertise to provide and utilize meteorological, oceanographic, and mapping, charting and geodetic data in support of all aspects of military operations.

This education will further enhance performance in all duties throughout a career, including operational billets, technical management assignments and policy making positions. Students will develop graduate level technical ability based upon general engineering and scientific principles, acquire diverse professional knowledge and develop analytical ability for practical problem solving.

**REQUIREMENTS FOR ENTRY**

A baccalaureate degree in the physical sciences, mathematics or engineering is required. Completion of mathematics through differential and inte-

gral calculus and one year of calculus-based college physics are required. An APC of 323 is required for direct entry.

**AIR-OCEAN SCIENCE  
SUBSPECIALTY**

Completion of this curriculum qualifies an officer as an Air-Ocean Subspecialist with a subspecialty code of XX47. The Curriculum Sponsor is OP-096, Oceanographer of the Navy.

**Typical Jobs in this Subspecialty:**

- Commanding Officer
- Oceanographic Unit
- Oceanographer
- CV/BB
- Submarine Group Staff
- Fleet Staff
- CARGRU/CRUDESGRU Staff
- O in C Naval Oceanography
- Command Detachment
- NAVOCEANCOM Center
- Defense Mapping Agency
- Office of Naval Research

**Entry Dates:** Air-Ocean Sciences is eight or nine quarter course of study with preferred entry dates in April and October. If further information is needed, contact the Academic Associate or Curricular Officer for this curriculum.

**Academic Associates:**

Robert L. Haney, Professor,  
Code 63Hy, Root Hall, Room 224,  
(408) 646-2308, AV 878-2308.

Joseph von Schwind, Assoc. Prof.,  
Code 68Vs, Hydrographic Sciences,  
Building 224, Room 106,  
(408) 646-3271, AV 878-3271.

**Degree:** Requirements for the degree Master of Science in Meteorology and Physical Oceanography are met en route to satisfying the skill requirements of the curricular program.

## OPERATIONAL OCEANOGRAPHY CURRICULUM 374

This curriculum will provide stu-  
dents with an understanding of the air-  
sea environment and operations anal-  
ysis principles to forecast atmospheric,

oceanic and acoustic conditions in sup-  
port of all aspects of Naval Operations  
including the ASW, EW and C3 prob-  
lems. Primary emphasis is placed on  
the understanding of the impact of the  
environment (atmospheric, ocean and  
their interface) on weapons systems,

sensors and platforms. The program recognizes the importance of interactions between the atmosphere and oceans, and deals with the relationships at the air-sea interface.

### REQUIREMENTS FOR ENTRY

A baccalaureate degree in the physical sciences, mathematics or engineering is desirable. Completion of mathematics through differential and integral calculus and one year of calculus-based college physics are required. An APC of 323 is required for direct entry. The Engineering Science Program (Curriculum 460) is available for candidates who do not meet all admission requirements for direct entry.

### OPERATIONAL OCEANOGRAPHY SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Operational Oceanography Subspecialist with a subspecialty code of XX49. The Curriculum Sponsor is OP-096, Oceanographer of the Navy.

#### Typical Jobs in this Subspecialty:

CV A.S.W. Module  
CRUDESGRU/CARGRU Staff

A.S.W. Operations Center  
Navy Laboratories  
Office of Naval Research  
SACLANT A.S.W. Research Center  
La Spezia, Italy  
Naval Oceanographic Research and  
Development Agency (NORDA)  
Defense Mapping Agency

**Entry Dates:** Operational Oceanography is an eight quarter course of study with entry dates in April and October. If further information is needed, contact the Academic Associate or Curricular Officer for this curriculum.

#### Academic Associates:

Robert L. Haney, Professor,  
Code 63Hy, Root Hall, Room 244,  
(408) 646-2308, AV 878-2308.

Joseph von Schwind, Assoc. Prof.,  
Code 68Vs, Hydrographic Sciences  
Building 224, Room 106,  
(408) 646-3271, AV 878-3271.

**Degree:** Requirements for the degree Master of Science in Meteorology and Physical Oceanography are met as a milestone en route to satisfying the skill requirements of the curricular program.

## TYPICAL COURSE OF STUDY

### Quarter 1

- MA 2047 (4-0) Linear Algebra & Vector Analysis
- MA 2121 (4-0) Differential Equations
- MR/OC 2020 (1-2) Computer Computations in Air-Ocean Sciences
- MR 3420 (3-0) Atmospheric Thermodynamics
- OC 3230 (4-0) Descriptive Physical Oceanography

### Quarter 2

- MA 3132 (4-0) Partial Differential Equations & Integral Transforms
- MR/OC 3321 (4-0) Air-Ocean Fluid Dynamics
- MR/OC 3522 (4-2) Remote Sensing of the Atmosphere & Ocean Track Option

### Quarter 3

- MR 3222 (4-3) Meteorological Analysis/Laboratory
- MR 4322 (4-0) Dynamic Meteorology
- OC 3240 (4-2) Dynamical Oceanography
- MR/OC 3140 (3-2) Probability & Statistics for Air-Ocean Sciences

### Quarter 4

- MR 3234 (4-3) Tropospheric & Stratospheric Meteorology/Lab
- OC 4211 (4-0) Linear Wave Dynamics
- MR/OC 3150 (3-2) Analysis of Air-Ocean Time Series Track Option

**Quarter 5**

- MR 3254 (3-2) Tropical Meteorology/  
Lab
- MR/OC 4413 (4-0) Air-Sea Interaction
- MR 4416 (4-0) Atmospheric Factors in  
EM & Optical  
Propagation
- OC 3260 (3-0) Sound in the Ocean

**Quarter 6**

- MR/OC 3212 (4-0) Polar Meteorology/  
Oceanography
- OC 4331 (3-0) Mesoscale Ocean  
Variability
- OC 4267 (4-3) Ocean Influences and  
Prediction: Underwater  
Acoustics
- MR/OC 0810 Thesis Research

**Quarter 7**

- MR 3262 (3-5) Operational Atmo-  
spheric Prediction
- OC/MR 3570 (2-4) Operational Ocean-  
ography & Meteorology  
Track Option
- MR/OC 0810 Thesis Research

**Quarter 8**

- Track Option
- Track Option
- OC 3610 (2-2) Wave & Surf  
Forecasting
- MR/OC 0810 Thesis Research

**OCEANOGRAPHY  
CURRICULUM 440**

The Oceanography Curriculum provides students with a sound understanding of the science of oceanography and develops the technical expertise to provide and utilize oceanographic and acoustical data in support of all aspects of military operations. Particular emphasis is placed on the understanding of oceanic efforts on the solution of the undersea warfare problem.

This education further enhances performance in operational billets, technical management assignments and policy-making positions. Students will develop sound graduate level technical ability based on general engineering and scientific principles.

**Entry Dates:** Oceanography is an eight quarter course of study with entry dates in April and October. If further information is needed, contact the Academic Associate or Curricular Officer for this curriculum.

**REQUIREMENTS FOR ENTRY**

The program is only open to officers of the U.S. Navy as a PhD program.

A baccalaureate degree in the physical sciences, mathematics or engineering is required. Completion of mathematics through differential and integral calculus and one year of calculus based college physics are required. An APC of 323 is required for direct entry. The Engineering Science Program (Curriculum 460) is available for candidates who do not meet all admission requirements for direct entry.

**Academic Associate:**

Joseph J. Von Schwind, Assoc. Prof.,  
Code 68Vs, Hydrographic Sciences  
Building 224, Room 106,  
(408) 646-3271, AV 878-3271.

**Degree:** Master of Science in Oceanography.

## TYPICAL COURSE OF STUDY

## Quarter 1

HYDROGRAPHIC SCIENCES  
CURRICULUM 441

This curriculum of study provides students with a sound understanding of oceanography and hydrography. Hydrography (a subdiscipline of Mapping, Charting and Geodesy (MC&G)) is the science of the measurement, description and charting of the sea floor with special reference to navigation and marine operations. This interdisciplinary program integrates the scien-

tific principles of oceanography with the practical engineering procedures of hydrography. Students achieve the technical expertise to provide and utilize hydrographic data in support of all aspects of hydrographic operations.

**Entry Date:** Hydrographic Sciences is an eight quarter course of study with preferred entry in October. If further information is needed, contact the Academic Associate for this curriculum.

**REQUIREMENTS FOR ENTRY**

This program is open to officers of the National Oceanic and Atmospheric Administration, Coast Guard, Corps of Engineers, allied officers and civilian employees of the U.S. Federal Government. There is no Navy Subspecialty in Hydrographic Sciences.

A baccalaureate degree with above average grades in mathematics and the physical sciences. Differential and integral calculus and one year of calculus based college physics are required.

An APC of 324 is required for direct entry into the program. The Engineering Science Program (Curriculum 460) is available for candidates who do not meet all admission requirements for direct entry.

**Academic Associate:**

Joseph J. Von Schwind, Assoc. Prof.,  
Code 68Vs, Hydrographic Sciences  
Building 224, Room 106,  
(408) 646-3271, AV 3271.

**Degree:** Master of Science in Hydrographic Sciences.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

- MA 2121 (4-0) Differential Equations
- MA 2047 (4-0) Linear Algebra & Vector Analysis
- OC 3230 (4-0) Descriptive Physical Oceanography
- CS 2450 (3-1) Computer Programming with FORTRAN

**Quarter 5**

- GH 3910 (2-1) Hydrographic Survey Field Experience
- GH 3911 (1-5) Geodetic Survey Field Experience
- GH 4906 (4-0) Geometric & Astronomic Geodesy

**Quarter 2**

- MA 3132 (4-0) Partial Differential Equations & Integral Transforms
- MR 2220 (4-1) Marine Meteorology
- OC 3130 (4-2) Mechanics of Fluids
- GH 3901 (4-2) Mapping, Charting & Geodesy

**Quarter 6**

- OC 0810 Thesis Research
- OC 3325 (3-0) Marine Geophysics
- GH 3912 (2-2) Advanced Hydrography
- Track Option

**Quarter 3**

- OC 3120 (4-3) Biochemical Processes in the Ocean
- MR/OC 3140 (3-2) Probability & Statistics for Air-Ocean Sciences
- OC 4213 (3-1) Nearshore & Wave Processes
- GH 3902 (4-2) Hydrographic and Geodetic Surveying

**Quarter 7**

- OC 0810 Thesis Research
- OC 4212 (4-0) Tides
- GH 4907 (4-0) Gravimetric & Satellite Geodesy
- Track Option

**Quarter 4**

- GH 3906 (2-2) Hydrographic Survey Planning
- GH 3914 (2-2) Adjustment Computations
- GH 4908 (3-2) Photogrammetry and Remote Sensing
- MA 3232 (3-2) Numerical Analysis

**Quarter 8**

- OC 0810/0999 Thesis Research/Presentation
- NS 3962 (4-0) Ocean, Maritime & Tort Law for the Hydrographic Community
- Track Option
- Track Option

## ANTISUBMARINE AND ELECTRONIC WARFARE PROGRAMS

### Curricular Officer

David P. Kimball, CDR, USN,  
Code 3A, Spanagel Hall, Room 304,  
(408) 646-2135/6, AV 878-2135/6.

### ANTISUBMARINE WARFARE CURRICULUM 525

The ASW Curriculum educates officers in the engineering fundamentals, physical principals and analytical concepts that govern operational employment of ASW sensors and weapon systems, and includes extensive breadth in the appropriate scientific and technical disciplines. This interdisciplinary program integrates mathematics, physics, acoustics, electrical engineering, oceanography, operations analysis, human factors, computer science and meteorology. The academic content divides naturally into four major areas: Electrical Engineering with emphasis on signal processing, Underwater Acoustics with emphasis on signal propagation and detection, Operations Analysis with emphasis on tactical application and decision analysis, and Air-Ocean Sciences with emphasis on the environmental factors affecting sound in the sea.

### REQUIREMENTS FOR ENTRY

A baccalaureate degree, or equivalent, from a program with a calculus sequence and a calculus-based physics sequence that results in an APC of 323 is required for direct input. Courses in the physical sciences and engineering are desirable. An additional qualification for entry is that a selectee must have demonstrated strong professional performance in at least one ASW mission unit. Officers not meeting the academic requirements for direct input enter the program via one or two quarters of Engineering Science (Curriculum 460).

### ANTISUBMARINE WARFARE SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Antisubmarine Warfare Subspecialist with a subspecialty code of XX44P. The Curriculum Sponsor is OP-71, Antisubmarine Warfare Division.

### Typical Jobs in this Subspecialty:

Naval Ocean Systems Center  
Naval Underwater Systems Center  
Naval Surface Warfare Development Group  
Destroyer Squadron Staffs  
Operational Test and Evaluation Force  
Submarine Development Squadron Twelve  
Patrol Wing Staffs  
Naval Air Systems Command  
Air Test and Evaluation Squadron One  
OPNAV

**Entry Dates:** The ASW curriculum is an eight quarter course of study with entry dates in April and October. If further information is needed, contact the Academic Associate or Curricular Officer for this curriculum.

### Academic Associate:

James V. Sanders, Assoc. Professor,  
Code 33A, Spanagel Hall, Room 328,  
(408) 646-2116, AV 878-2116.

**Degree:** Requirements for the degree Master of Science in Applied Science are met as a milestone enroute to satisfying the skill requirements of the curricular program.

TYPICAL COURSE OF STUDY

**Quarter 1**

- MA 2138 (5-0) Multi-Var Calculus, Ordinary Diff Equations & Laplace Transforms
- MA 2047 (4-1) Linear Algebra & Vector Analysis
- PH 2401 (3-0) Introduction to the Sonar Equations
- OC 3230 (4-0) Oceanic Thermodynamic
- OS 2210 (4-1) Introduction to Computer Programming

**Quarter 2**

- EO 2720 (4-2) Electronic Systems
- OS 2103 (4-1) Applied Probability for Systems Technology
- PH 2119 (4-2) Oscillation and Waves
- MA 3139 (4-0) Fourier Analysis and Partial Differential Equations

**Quarter 3**

- EO 3720 (4-1) Introduction to Signals and Noise
- OS 3303 (4-1) Computer Simulation
- OS 3604 (4-0) Decision & Data Analysis
- PH 3402 (4-1) Underwater Acoustics

**Quarter 4**

- EO 4720 (4-1) Signal Processing Systems
- OC 4267 (4-3) Ocean Influences and Predictions: Underwater Acoustics
- OS 3601 (4-0) Search Detection and Localization
- PH 4403 (4-1) Advanced Topics in Underwater Acoustics

**Quarter 5**

- (First six weeks)
- MR 2413 (3-1) Meteorology for Anti-submarine Warfare
- OS 3402 (3-1) Human Factors for Anti-submarine Warfare
- (Last six weeks)
- EXPERIENCE TOUR OFF CAMPUS

**Quarter 6**

- EC 4450 (4-1) Sonar Systems Engineering
- PH 3479 (3-0) Physics of Underwater Weapons
- OC 3522 (4-2) Remote Sensing of Atmosphere and Ocean Elective

**Quarter 7**

- OS 3602 (4-1) Introduction to Combat Models and Weapons Effectiveness
- OS 4601 (4-0) Test and Evaluation
- PH 3306 (4-0) Electromagnetic Wave Propagation
- ST 0810 Thesis

**Quarter 8**

- PH 3002 (4-0) Non-Acoustic Sensor Systems
- NS 3152 (4-0) Naval Warfare and the Threat Environment
- ST 0810 Thesis

**ELECTRONIC WARFARE CURRICULUM 595**

This curriculum provides the services with officers thoroughly knowledgeable in the technical and operational aspects of the role of electronic warfare as a vital, integral part of modern warfare. It is designed to provide an understanding of the principles underlying the broad field of electronic warfare, and because of the electronic

nature of modern sensor, weapon and command, control and communications systems, it seeks to develop in the officer a grasp of electronic, electrical and electromagnetic fundamentals, theory and techniques.

**REQUIREMENTS FOR ENTRY**

To undertake studies in this curriculum requires a baccalaureate degree with above average grades and

completion of mathematics courses through differential and integral calculus. Students lacking the background may matriculate via the Engineering Science Program (Curriculum 460). An APC of 325 is required for direct entry.

**ELECTRONIC WARFARE  
SUBSPECIALTY**

Completion of this curriculum qualifies an officer as an Electronic Warfare Subspecialist with a code of XX46. The Curriculum Sponsor is OP-76, Electronic Warfare Division.

**Typical Jobs in this Subspecialty:**

- Staff Electronic Warfare  
COM3RDFLT OPS CP  
CDR  
OPNAV OP-954H1
- Staff Electronic Warfare  
CINCPACFLT  
LCDR  
FLTCORGRU 2

- Staff Electronic Warfare  
COM7THFLT  
Electronic Warfare Assistant  
VAQ 33  
Executive Officer  
NSGA, Naples/ECCM

**Entry Date:** The Electronic Warfare Curriculum is an eight quarter course of study with a single entry date in October. If further information is needed, contact the Academic Associate for this curriculum.

**Academic Associate:**

Alfred Cooper, Professor,  
Code 61Cr, Spanagel Hall, Rm. 212,  
(408) 646-2452, AV 878-2452.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

- CS 2450 (3-1) Computer Programming
- MA 2138 (5-0) Multi-Var Calculus,  
Ordinary Diff Equations  
and Laplace Transforms
- MA 2047 (4-1) Linear Algebra and  
Vector Analysis
- PH 2203 (4-0) Topics in Basic Physics:  
Waves and Optics

**Quarter 2**

- EO 2720 (4-2) Introduction to  
Electronic Systems
- OS 2103 (4-1) Applied Probability for  
Systems Technology
- MA 3139 (4-0) Fourier Analysis and  
Partial Differential  
Equations
- PH 2304 (2-0) Topics in Basic Physics:  
Electromagnetism
- MR 2416 (2-0) Meteorology for EW

**Quarter 3**

- EO 3720 (4-1) Intro to Signals & Noise
- OS 3604 (4-0) Decision & Data Analysis
- EO 2760 (4-1) Electromagnetic Theory
- EC 2810 (3-2) Digital Machines
- EO 2730 (2-1) Control Systems

**Quarter 4**

- EO 4720 (4-1) Signal Processing  
Systems
- PH 2207 (4-0) Fundamentals of Electro-  
Optics
- EO 3760 (4-2) EM Radiation Scattering  
and Propagation
- OS 3003 (4-0) Operations Research for  
Electronic Warfare

**Quarter 5**

- EO 4760 (4-1) Microwave Devices  
and Radar
- PH 3208 (4-1) Electro-Optic Principles  
and Devices

(Last six weeks)

**EXPERIENCE TOUR OFF CAMPUS**

**Quarter 6**

- OS 3603 (3-1) Simulation and  
Wargaming
- EO 4730 (3-1) EO Systems and CM
- EO 4780 (3-2) Electronic Warfare  
Systems
- EW 0810 Thesis

# ANTISUBMARINE WARFARE

## Quarter 7

- EO 3780 (3-2) Electronic Warfare  
Computer Applications
- OS 4601 (4-0) Operational Test  
and Evaluation
- EW 0810 Thesis
- EW 0810 Thesis

## ELECTRONIC WARFARE (INTERNATIONAL) CURRICULUM 596

The curriculum is modeled after Curriculum 595 and for the first four quarters exactly parallels the basic curriculum. In the second year, international students are channeled in courses similar in content to courses taught to U.S. students but without the classification level.

## Quarter 1

- CS 2450 (3-1) Fortran Program
- MA 2138 (5-0) Multi-Var Calculus,  
Ordinary Diff Equations  
and Laplace Transforms
- MA 2047 (4-1) Linear Algebra and  
Vector Analysis
- PH 2203 (4-0) Basic Physics: Waves  
and Optics

## Quarter 2

- EO 2720 (4-2) Introduction to  
Electronic Systems
- OS 2103 (4-1) Applied Probability for  
Systems Technology
- MA 3139 (4-0) Fourier Analysis and  
Partial Diff Equations
- PH 2304 (2-0) Basic Physics:  
Electromagnetism
- MR 2416 (2-0) Meteorology for EW

## Quarter 3

- EO 3720 (4-0) Introduction to Signals  
and Noise
- OS 3604 (4-0) Decision and Data  
Analysis
- EO 2760 (4-1) Electromagnetic Theory
- EC 2810 (3-2) Digital Machines
- EO 2730 (2-1) Control Systems

## Quarter 4

- EO 4720 (4-1) Signal Processing  
Systems
- PH 2207 (4-0) Fundamentals of Electro-  
Optics

## Quarter 8

- EO 4750 (2-0) Signal Intelligence
- EO 4790 (2-0) C3 Counter Measures
- NS 3152 (4-0) Naval Warfare and the  
Threat Environment
- EW 0810 Thesis

## REQUIREMENTS FOR ENTRY

International students must meet the APC requirements and receive approval by the Director of Admissions at the Naval Postgraduate School. Actual quota assignment and invitational travel orders are approved and issued by the Office of the Chief of Naval Operations through Foreign Military Assistance Division.

## TYPICAL COURSE OF STUDY

- EO 3760 (4-2) EM Radiation Scattering  
and Propagation
- EO 4790 (3-0) Communications and  
Comm CM

## Quarter 5

- OS 3403 (3-1) Human Factors in EW
- OS 3303 (4-1) Computer Simulation
- PH 3208 (4-1) Electro-Optic Principles  
and Devices
- CS 3201 (3-2) Intro to Comp Organi-  
zation for Non-majors

## Quarter 6

- EC 3610 (3-2) Microwave Engineering
- OS 3003 (4-0) Operations Research for  
Electronic Warfare
- PH 4209 (3-2) EO/IR Systems and  
Countermeasures
- EW 0810 Thesis

## Quarter 7

- EC 4620 (3-2) Radar Systems
- EO 3780 (3-2) Electronic Warfare  
Computer Applications
- EW 0810 Thesis
- EW 0810 Thesis

## Quarter 8

- EC 4690 (3-2) Principles of Electronic  
Warfare
- EO 4750 (2-0) Signals Intelligence
- OS 4601 (4-0) Test and Evaluation
- OS XXXX (2-0) Historical Development  
of Electronic Warfare
- EW 0810 Thesis

## COMPUTER TECHNOLOGY PROGRAMS

### Curricular Officer

James L. Branson, CDR, USN,  
Code 37, Spanagel Hall, Room 401,  
(408) 646-2174/5, AV 878-2174/5.

### COMPUTER SYSTEMS MANAGEMENT CURRICULUM 367

This is an interdisciplinary graduate level master's program integrating mathematics, accounting, economics, statistics, computer science information systems, behavioral science, and management disciplines.

This program prepares the officer for the planning, procurement, and management decision-making skills necessary to evaluate changing technology, to translate operational requirements and economic trade offs into system specifications, and to implement and properly utilize complex tactical and non-tactical military computer centers, networks, and systems. This curriculum is designed to meet the Navy's need for a technically qualified officer with managerial skills essential to the successful implementation and effective utilization of computer systems in military settings.

#### REQUIREMENTS FOR ENTRY

A baccalaureate degree, or the equivalent, with above average grades in mathematics (including differential and integral calculus) resulting in an APC of at least 335 is required for direct entry. Students lacking these quantitative prerequisites may be acceptable for the program providing their undergraduate records and/or other indicators of success, such as GRE (Graduate Record Examination), GMAT (Graduate Management Admission Test) formerly ATGSB (Admission Test for Graduate Schools of Business), indicate a capability for graduate level work. While previous computer or automatic data processing (ADP) experience is certainly helpful, it is not essential.

### COMPUTER SYSTEMS MANAGEMENT SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Computer Systems Management Subspecialist with a subspecialty code of XX95. The Curriculum Sponsor is OP-945, Director, Information Systems Division.

#### Typical Jobs in this Subspecialty:

Weapons Control Project Subsurface  
Service Engineer

Naval Underwater Systems  
Center, Newport, RI

Operation Test Evaluation  
NAVELEX PDE-106 NAVSPACE  
PROGRAM, Washington, DC

Air Systems  
NAVOCEANSYSCEN  
San Diego, CA

Computer Systems  
NSA/CSS, Ft. Meade, MD

Data Base Management  
Naval War College, Newport, RI  
Computer Systems Analyst/Develop-  
ment

COMNAVMEDCOM  
Washington, DC

Computer Systems Analyst  
COMNAVDAC, Washington, DC

**Entry Dates:** Computer Systems Management is a six quarter course of study with entry dates in April and October. On a case-by-case basis, students may commence their programs in January and July through prior preparation. If further information is needed, contact the Academic Associate for this curriculum.

**Academic Associate:**

Daniel R. Dolk, Assistant Professor,  
Code 54Dk, Ingersoll Hall, Rm. 316,  
(408) 646-2260, AV 878-2260.

**Degree:** Requirements for the degree Master of Science in Information Systems are met as a milestone en route to satisfying the skill requirements of the curricular program.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

- CS 2970 (5-0) Struc Prog with PASCAL
- IS 2000 (3-0) Introduction to  
Computer Management
- MN 2155 (4-0) Accounting of Mgmt
- MN 3105 (4-0) Organization and Mgmt

**Quarter 2**

- CS 3010 (4-0) Comp Devices & Sys
- CS 3020 (4-0) Software Design
- IS 3170 (4-0) Econ Eval of Info Sys I
- IS 2100 (0-2) Info Systems Lab
- OS 3101 (5-0) Stat Anal for Mgmt

**Quarter 3**

- CS 3030 (4-0) Op Sys Structures
- IS 4200 (4-0) Sys Anal & Design
- IS 4183 (4-0) Applic of Database  
Mgmt Sys
- OS 3004 (5-0) Ops Research for CSM

**Quarter 4**

- IS 3502 (4-0) Computer Networks:  
Wide Area/Local Area
- IS 4185 (4-0) Decision Support Sys  
Thesis  
(Option Elective)
- IS 0810

**Quarter 5**

- IS 4300 (4-0) Software Engr & Mgmt
- MN 4154 (4-0) Financial Mgmt in The  
Armed Forces  
Thesis  
(Option Elective)
- IS 0810

**Quarter 6**

- IS 4182 (4-0) Info Systems Mgmt
- MN 3307 (4-0) ADP Acquisition  
Thesis  
(Option Elective)
- IS 0810

**COMPUTER SCIENCE  
CURRICULUM 368**

This program is an interdisciplinary technical graduate level master's program integrating mathematics, statistics, computer science, electrical engineering, information systems, and operations research. The Computer Science curriculum is designed to provide an officer with the technical knowledge and skills necessary to specify, evaluate, and manage computer system design; to provide technical guidance in applications ranging from data processing to tactical embedded systems; to educate officers in the analysis and design methodologies appropriate for hardware, software, and firmware, and to provide the officer with practical experience in applying modern computer laboratory equipment and research techniques to military problems. In addition to the core curriculum, the officer will use elective courses to complete an option area in one of the following: Decision Support System, Tactical Computers, Computer Networks, and Information and Computer Center Operations.

**COMPUTER SCIENCE  
SUBSPECIALTY**

Completion of this curriculum qualifies an officer as a Computer Science Subspecialist with a subspecialty code of XX91. The Curriculum Sponsor is OP-945, Director, Information Systems Division.

**Typical Jobs in this Subspecialty:**

Navigation Systems Integration  
Projects Office

STRATSTSORIG, Washing-  
ton, DC

Assistant Information Manage-  
ment/TRIMIS ADDU FM

COMNAVMEDCOM, Washing-  
ton, DC

ADP Programs/WWMCCS,  
Project

DPSCPAC, Pearl Harbor, HI

ADP Plans Director

FLEMATSUPPO, Mechanics-  
burg, PA

ADP Plans-Customer Liaison

NARDAC, Pensacola, FL

ASST CIC - NTDS

USS CARL VINSON (CVN-70)

**REQUIREMENTS FOR ENTRY**

A baccalaureate degree, or the equivalent, with above average grades in mathematics, (including differential and integral calculus) resulting in an APC of at least 325, is required for direct entry. Undergraduate majors in applied science or engineering are highly desirable. Students lacking these prerequisites may be acceptable for the program providing their undergraduate records and/or other indicators of success, such as GRE (Graduate Record Examination), indicate a capability to work in quantitative subjects. While previous academic or practical experience in computer science is certainly helpful and can enhance an applicant's potential for admission, such experience is not a prerequisite. In addition to the core curriculum, the officer will use elective courses to complete an option area in one of the fol-

lowing: Tactical computers, Software Engineering, Computer Networks, Artificial Intelligence, and Military Data Processing.

**Entry Dates:** Computer Science is an eight quarter course of study with entry dates in April and October. On a case-by-case basis, students may commence their program in January and July through prior preparation. If further information is needed, contact the Academic Associate for this curriculum.

**Academic Associate:**

Uno R. Kodres, Professor,  
Code 52 Kr, Spanagel Hall, Rm 534A,  
(408) 646-2197, AV 878-2197.

**Degree:** Requirements for the degree Master of Science in Computer Science are met as a milestone en route to satisfying the skill requirements of the curricular program.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

- CS 2970 (4-1) Structured Programming in ADA
- MA 2025 (4-1) Logic, Sets and Functions
- EC 2810 (3-2) Digital Machines
- OS 3001 (4-0) Ops Research for Computer Scientists

**Quarter 2**

- CS 3200 (3-2) Introduction to Computer Organization
- CS 3111 (4-0) Principles of Programming Languages
- CS 3300 (3-1) Data Structures
- MA 3026 (5-0) Discrete Math and Automatic Theory

**Quarter 3**

- CS 3320 (3-1) Database Systems
- CS 3310 (4-0) Artificial Intelligence
- CS 3450 (3-1) Systems Software Design
- CS 3460 (3-2) Software Methodology

**Quarter 4**

- CS 3502 (4-0) Computer Communications and Networks
- CS 3650 (4-0) Theory of Algorithms
- CS 4900 (0-2) Research Seminar in

- Computer Science
- Option Elective\*
- Option Elective\*

**Quarter 5**

- CS 4550 (4-0) Theory of Formal Languages
- CS 4202 (3-2) Computer Graphics
- NS 3252 (4-0) Joint and Maritime Strategic Planning
- Option Elective\*

**Quarter 8**

- Option Elective\*
- Option Elective\*
- CS 0810 Thesis

\* Note: Option Elective courses will be determined by the selection of one of the following tracks: Artificial Intelligence, Tactical Computer Systems, Military Data Processing or Software Engineering.

## ELECTRONICS AND COMMUNICATIONS PROGRAMS

### Curricular Officer

John T. Donnelly, CDR, USN,  
Code 32, Spanagel Hall, Room 404,  
(408) 646-2056, AV 878-2056

### ELECTRONIC SYSTEMS ENGINEERING CURRICULUM 590

This curriculum is designed to educate officers in current electronics technology and its application to modern naval warfare. It establishes a broad background of basic engineering knowledge, leading to selected advanced studies in electronic systems, ship/weapon control systems, information processing applicability. It will enhance individual performance in all duties throughout a naval career, including operational billets, technical management assignments and policy making positions, thereby preparing the officer for progressively increased responsibility including command, both ashore and afloat.

### REQUIREMENTS FOR ENTRY

A baccalaureate degree in engineering or the physical sciences is required. Differential and integral calculus, one year of calculus based college physics, and at least one semester of college chemistry are required. The Engineering Science Program (Curriculum 460) is available for candidates who do not meet all admission requirements. The additional time required will vary with the candidate's background. Prior to undertaking the program, or as a part of the program, each officer will have earned the equivalent of an accredited BSEE. An APC of 323 is required for direct entry.

**Entry Dates:** Electronic Systems Engineering is a nine quarter course of study with entry dates in every quarter. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

### ELECTRONICS AND COMMUNICATIONS SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Engineering Electronics Subspecialist with a subspecialty code XX55. The Curriculum Sponsor is Space and Naval Warfare Systems Command.

### Typical Jobs in this Subspecialty:

Instructor

Naval Academy, Annapolis, MD

Executive Officer

SPAWARHDQTRS

Operations Test and Evaluation

COMOPTEVFOR

Electronics Maint. Officer

USS NIMITZ CVN 68

Executive Officer

NEEACT PAC, Pearl Harbor, HI

Electronics P & P

CINCLANTFLT

Electronics Maint. Officer

USS BLUE RIDGE LCC 19

Project Officer, Warfare Systems

Architecture and Engineering

SPAWARHDQTRS

### Academic Associate:

Paul H. Moose, Assoc. Professor,  
Code 62Me, Spanagel Hall,

Room 448C,

(408) 646-2838, AV 878-2838.

**Degree:** Requirements for the degree Master of Science in Electrical Engineering are met en route to satisfying the skill requirements of this curricular program.

## TYPICAL COURSE OF STUDY

### (COMPUTER SYSTEMS OPTION)

#### Quarter 1

- EC 2100 (3-2) Circuit Analysis I
- EC 2820 (3-2) Digital Logic Circuits
- MA 2047 (4-0) Linear Algebra and Vector Analysis
- CS 2450 (3-1) Computer Programming with FORTRAN

#### Quarter 2

- EC 2110 (3-2) Circuit Analysis
- EC 2200 (3-3) Electronics Engineering
- MA 2121 (4-0) Differential Equations
- EC 2600 (4-0) Introduction to Fields and Waves

#### Quarter 3

- EC 2800 (3-2) Introduction to Microprocessors
- EC 2210 (3-2) Electronics Engineering II
- MA 3232 (3-2) Numerical Analysis
- EC 2410 (3-0) Fourier Analysis of Signals and Systems

#### Quarter 4

- EC 3800 (3-2) Microprocessor-Based Systems Design
- EC 2400 (3-0) Discrete Systems
- EC 2420 (3-0) Linear Systems
- EC 2500 (3-2) Communications Theory

#### Quarter 5

- EC 3400 (3-0) Introduction to Digital Signal Processing
- EC 3820 (3-1) Computer Systems
- EC 2300 (3-2) Control Systems
- EC 2220 (2-4) Applied Electronics (2-4)

#### Quarter 6

- EC 2610 (3-2) Electromagnetic Engineering
- EC 3830 (3-2) Digital Design Methodology
- OS 2102 (4-1) Introduction to Applied Probability for Electrical Engineering
- CS 3550 (3-2) Computers in Combat Systems

#### Quarter 7

- EC 3600 (3-2) Radiation, Scattering and Propagation
- EC 3310 (4-0) Linear Optimal Estimation and Control
- EC 3500 (4-0) Analysis of Random Signals
- EC 0810 Thesis

#### Quarter 8

- EC 4830 (3-1) Digital Computer Design
- EC 4820 (3-1) Computer Architectures
- EC 0810 Thesis
- EC 0810 Thesis

#### Quarter 9

- EC 4460 (3-0) Principles of Systems Engineering
- CS 4500 (4-1) Software Engineering
- EC 4870 (3-2) VLSI Systems Design
- EC 0810 Thesis

#### Typical Jobs in this Subspecialty:

### COMMUNICATIONS ENGINEERING CURRICULUM 600

The curriculum will provide officers with a comprehensive scientific and technical knowledge in the field of communications engineering as applied to Navy and Defense command, control and communication systems. It is designed to establish a broad background of basic engineering knowledge, leading to the selected advanced

studies in communications. The officer student is provided a sound academic background in mathematics, computer science and technology, physics and electrical engineering. Additionally, the subject areas of digital signal processing, analysis of random signals, radiation, scattering and propagation, and microprocessor-based systems design are included.

#### REQUIREMENTS FOR ENTRY

A baccalaureate degree, or its equivalent, in engineering or the physical

sciences is preferred and at least one semester of college chemistry is required. The Engineering Science Program (Curriculum 460) is available for candidates who do not meet all admission requirements. The additional time required will vary with the candidate's background. Prior to undertaking the program, or as part of the program, each officer will have earned the equivalent of an accredited BSEE. An APC of 323 is required for direct entry.

**COMMUNICATIONS  
ENGINEERING  
SUBSPECIALTY**

Completion of this curriculum qualifies an officer as a Communications Engineering Specialist with a code of XX81. The Curriculum Sponsor is OP-941, Naval Communications Division.

**Typical Jobs in this Subspecialty:**

- Communications Engineering  
DEFCOMMENG CEN, Washington, DC
- TACAMO Project Control  
SPAWAR  
Command Assistant for Electromagnetic Spectrum Management  
CINCPACFLT  
Decision & Control  
NOSC, San Diego, CA
- Assistant for FLTSATCOM/UH  
OPNAV OP-943C2
- Assistant for MILSTAR/EXT  
OPNAV OP-943C4
- MILAST/ADUSD  
Office of Secretary of Defense  
SR TELECOMM  
NSA/CSS, Ft. Meade, MD
- Signal Analyst  
NSA/CSS, Ft. Meade, MD
- Plans & Projects  
COMNAVSECGRU, Washington, DC

**Academic Associate:**

Paul H. Moose, Assoc. Professor,  
Code 62Me, Spanagel Hall,  
Room 448C,  
(408) 646-2838, AV 878-2838.

**Degree:** Requirements for the degree Master of Science in Electrical Engineering are met as a milestone en route

to satisfying the skill requirements of this curricular program.

**Entry Dates:** Communications Engineering is a nine quarter course of study with entry dates in January, April, July and October. If further information is needed, contact the Academic Associate for this curriculum.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

- EC 2100 (3-2) Circuit Analysis I

### TELECOMMUNICATIONS SYSTEMS MANAGEMENT CURRICULUM 620 and 620CG

This curriculum provides instruction to officers who will perform as communications managers of new communications systems applications or as communication officers in large commands and staffs, afloat and ashore, including the organization of the Joint Chiefs of Staff and the Defense Communications Agency. The 620 and 620CG curricula are sponsored respectively by the Director of Naval Communications and the U.S. Coast Guard Headquarters. Each curriculum provides comprehensive study in management, with emphasis upon the systems management field. Additionally, the curricula provide study in the technical field appropriate to decision making in advanced systems and program management. These technical courses within the 620 curriculum have been especially prepared for non-engineers whereas those in the 620CG curriculum are engineering courses.

### TELECOMMUNICATIONS SYSTEMS MANAGEMENT SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Telecommunica-

tions Systems Management Subspecialist with a code of XX82. The Curriculum Sponsor is OP-941, Naval Communicator s Division.

**Typical Jobs in this Subspecialty:**

- COMM AF
- USS JOHN F. KENNEDY CV 67
- Commanding Officer
- NAVCOMSTA, Thurso, UK
- Commanding Officer
- NAVCOMSTA, Jacksonville, FL
- COMM OPS/FLT COMM
- CINCUSNAVEUR
- OPS T & E
- SPAWAR PDE-120
- Staff COMM 84/10
- EUCOM US HDQTRS
- PACAREA SI COMM
- CINCPACFLT SECGRP
- COMM AF
- USS BLUE RIDGE LCC 19

**REQUIREMENTS FOR ENTRY**

To undertake studies in this curriculum requires a baccalaureate degree with above average grades and completion of mathematics courses through single variable calculus. An APC of 335 is required for direct entry.

**Degree:** Requirements for the degree Master of Science in Telecommunications Systems Management are met as a milestone en route to satisfying the skill requirements of the curricular program.

**Entry Date:** Telecommunications Systems Management is a six quarter course of study with a single entry date in August for technical refresher. The 620CG curriculum is eight quarters in length and convenes in July. If further information is needed, contact the Academic Associate for these curricula.

**Academic Associate:**

Dan C. Boger, Assoc. Professor,  
Code 54Bo, Ingersoll Hall, Rm. 241,  
(408) 646-2607, AV 878-2607.

## JOINT COMMAND, CONTROL AND COMMUNICATIONS (Joint C3) AND SPACE SYSTEMS PROGRAMS

### Curricular Officer

Robert A. Allen, LTCOL, USAF,  
Code 39, Spanagel Hall, Room 203,  
(408) 646-2772, AV 878-2772.

### JOINT COMMAND, CONTROL AND COMMUNICATIONS CURRICULUM 365

The Joint C3 curriculum is designed to meet broad educational objectives endorsed by the Joint Chiefs of Staff. The overall objective is to provide officers and DoD civilian equivalents, through graduate education, with a comprehensive operational and technical understanding in the field of Command, Control and Communications systems as applied to Joint and combined military operations at the national and unified command levels. To develop individuals who have an understanding of the role C3 systems play in the use of military power, and the ability to interpret the impact of C3 on operating philosophy; possess an adequate background knowledge in the basic technology, human capabilities and joint military operations and how these are exploited in current C3 systems; can perform requirement and planning studies of new C3 systems, and contribute to crisis management. These officers should be able to undertake a wide range of assignments in C3 (both joint and intra-service) over the full span of a career.

### REQUIREMENTS FOR ENTRY

The Joint C3 curriculum is open to all U.S. Military Services and selected civilian employees of the U.S. Federal Government. Admission requires a baccalaureate degree with above average grades, and mathematics through differential and integral calculus. A

Top Secret security clearance is required with Special Intelligence (SI) clearance obtainable. An APC of 325 is required for direct entry. Officers not meeting the academic requirements for direct input may enter the program via one or two quarters of Engineering Science (Curriculum 460).

### JOINT COMMAND, CONTROL AND COMMUNICATIONS SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Joint Command, Control and Communications Subspecialist with a subspecialty code of XX45P. The Curriculum Sponsor is Directorate for Command, Control and Communications Systems (J6), Joint Staff.

### Typical Jobs in this Subspecialty:

- Staff Command and Control Officer  
Commander in Chief, Pacific Fleet  
Surface Systems Officer
- Naval Ocean Systems Center  
ADP Plans Officer
- World Wide Military Command &  
Control System Joint Program  
Office
- Staff Operations Plans Officer  
Headquarters, European  
Command
- Staff Operations and Plans Officer  
Commander 7th Fleet  
Programs Manager
- Naval Space and Warfare Systems  
Command

**Entry Dates:** Joint Command, Control and Communications is a six quarter course of study with a single entry

date in October. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

#### **Academic Associate:**

Dan C. Boger, Professor,  
Code 54Bo, Ingersoll Hall, Rm. 241,  
(408) 646-2607, AV 878-2607.

**Degree:** Requirements for the degree Master of Science in Systems Technology (Command, Control and Communications) are met as a milestone en route to satisfying the skill requirements of the curricular program.

## **TYPICAL COURSE OF STUDY**

### **Quarter 1**

- CS 3010 (4-0) Computing Devices and Systems
- OS 3404 (3-0) Man-Machine Interaction

## **SPACE SYSTEMS OPERATIONS CURRICULUM 366**

The Space Systems Operations graduate curriculum is designed to provide officers with an appreciation for military opportunities and applications in space, a comprehensive practical as well as theoretical knowledge of the operation, tasking and employment of space surveillance, communications, navigation, and atmospheric/oceanographic/environmental sensing systems, and a knowledge of payload design and integration.

**Entry Dates:** Space Systems Operations is an eight quarter course of study with a single entry date in October. If further information is needed, contact the Academic Associate of the Curricular Officer for this curriculum.

## **SPACE SYSTEMS OPERATIONS SUBSPECIALTY**

Completion of this curriculum qualifies an officer as a Space Systems Operations Subspecialist with a subspecialty code of XX76. The Curriculum Sponsor is OP-943, Navy Space Systems Division.

**Typical Jobs in this Subspecialty:**

Commanding Officer  
 Naval Space Surveillance  
 Systems  
 Plans Officer  
 North American Aerospace  
 Defense Command  
 Advanced Concepts Officer  
 Naval Space and Warfare  
 Systems Command  
 Space Defense Director  
 North American Aerospace  
 Defense Command

**REQUIREMENTS FOR ENTRY**

This curriculum is open solely to officers of the U.S. Armed Forces and selected civilian employees of the U.S. Federal Government. Admission requires a baccalaureate degree with

above average grades, completion of mathematics through differential and integral calculus, plus at least one course in calculus-based engineering physics. Students lacking this background may matriculate through the engineering science program (Curriculum 460). A Top Secret security clearance is required with Special Intelligence (SI) clearance obtainable.

**Academic Associate:**

Dan C. Boger, Professor,  
 Code 54Bo, Ingersoll Hall, Rm. 241,  
 (408) 646-2607, AV 878-2607.

## SPACE SYSTEMS ENGINEERING CURRICULUM 591

To provide officers, through graduate education, with a comprehensive scientific and technical knowledge in technological field applicable to military and Navy space systems. This curriculum is designed to equip officers with the theoretical and practical skills required to design and integrate military space payloads with other spacecraft subsystems. Officer graduates will be prepared by their education to design, develop, and manage the acquisition of space communications, navigation, surveillance, EW and environmental sensing systems.

### REQUIREMENTS FOR ENTRY

A baccalaureate degree, or its equivalent, in engineering or the physical sciences is preferred. The Engineering Science Program (Curriculum 460) is available for candidates who do not meet all admission requirements. The additional time required will vary with the candidate's background. For those undertaking the electrical engineering program, the officer will have earned the equivalent of an accredited BSEE. An APC of 323 is required for direct entry.

**Entry Dates:** Space Systems Engineering is a nine quarter course of study with entry dates in January, April, July and October. If further information is needed, contact the Academic Associate for this curriculum.

### Academic Associate:

Otto Heinz, Professor,  
Code 61Hz, Spanagel Hall, Rm. 114,  
(408) 646-2121, AV 878-2121.

**Degree:** Requirements for one of six technical degrees are met as a milestone en route to satisfying the skill requirements of this curricular program. The possible degrees are: Master of Science in Engineering Science, Computer Science, Electrical Engineering, Mechanical Engineering, Physics or Aeronautical Engineering.

## SPACE SYSTEMS ENGINEERING SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Space Systems Engineering Specialist with a subspecialty code of XX77. The Curriculum sponsor is OP-943, Navy Space Systems Division.

### Typical Jobs in this Subspecialty:

Assistant Project Manager Satellite Communications  
SPAWAR  
Manager Navy Space Project  
SPAWAR  
Head DMSP & NAVDEP, Joint Program Office  
Navy Space Systems Activity  
Los Angeles, CA  
Assistant for Navigation Systems

Naval Space Surveillance Systems  
Electronics Engineering Systems  
Dept. Head  
Navy Astronautics Group,  
Pt. Mugu, CA

## TYPICAL COURSE OF STUDY

### Quarter 1

MA 2121 (4-0) Differential Equations  
SS 2001 (4-0) Introduction to Space  
EC 2820 (3-2) Digital Logic  
CS 2450 (3-1) FORTRAN

**Quarter 2**

EC 2420 (3-0) Linear Systems  
 PH 2511 (4-0) Orbital Mechanics  
 EC 2410 (3-0) Fourier Analysis  
 EC 2200 (3-3) Electronics I

**Quarter 3**

EC 2400 (3-0) Discrete Systems  
 AE 2820 (3-2) S/C Structures  
 EC 2500 (3-2) Communications Theory  
 EC 2210 (3-2) Electronics II

**Quarter 4**

EC 2300 (3-2) Controls  
 PH 3514 (4-0) Space Environment  
 EC 2800 (3-2) Microprocessors  
 AE 2840 (3-2) Thermo/Fluids

**Quarter 5**

SS 3001 (4-0) Military Operations  
 in Space  
 EO 3740 (4-0) Space Power  
 EC 2220 (2-4) Applied Electronics  
 AE 3815 (4-0) S/C Dynamics

**Quarter 6**

CS 3020 (4-0) Software Design  
 MR 3522 (4-2) Remote Sensing  
 AE 3850 (4-0) Propulsion  
 Specialization  
 Sequence

**Quarter 7**

PH 3360 (4-1) EM Waves  
 Thesis  
 AE 3804 (3-0) Thermal Control  
 Specialization  
 Sequence

**Quarter 8**

Thesis  
 AE 4870 (4-0) S/C Design  
 Specialization  
 Sequence

# NATIONAL SECURITY AND INTELLIGENCE PROGRAMS

## Curricular Officer

James W. Mueller, CAPT, USN,  
Code 38, Root Hall, Room 216,  
(408) 646-2228, AV 878-2228.

## Assistant Curricular Officer

Denise P. Newell, LT, USN,  
Code 381, Root Hall, Room 211,  
(408) 646-2845, AV 878-2845.

### MIDDLE EAST, AFRICA, SOUTH ASIA CURRICULUM 681

Area studies curricula focus on the history, culture, and religion of a specific region or country and provide students with a knowledge of current issues, economic and political structures and institutions, military forces, including strategic capabilities and policy implications, and geopolitical influences.

#### REQUIREMENTS FOR ENTRY

Prospective students must be U.S. military officers or civilian employees of the U.S. Federal Government. Students must have a baccalaureate degree earned with above average academic performance and an APC of 365. College-level preparation in basic descriptive and inferential statistics is required.

**Entry Dates:** Area studies are six quarter courses of study with entry dates in January and July. If information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

### MID EAST, AFRICA, SOUTH ASIA SUBSPECIALTY

Completion of the 681 curriculum qualifies an officer as a Mid East, Africa, South Asia Subspecialist with a subspecialty code of XX21. The Curriculum Sponsor is OP-06, Chief of Naval Operations (Plans, Policy and Operations).

### Typical Jobs in this Subspecialty:

Operations Intelligence  
Commander Middle East Force  
STF Operations and Plans  
Commander Middle East  
for Bahrain  
POL - MIL Planner  
Joint Chiefs of Staff,  
Washington, DC  
Mid East/Southwest Asia Policy  
CINCUSNAVEUR LONDON  
Area Officer  
DIA  
Head, Middle East, Asia,  
Southwest Asia  
OP-611  
Military Assistance Program  
Military Liaison Office Tunisia

#### Academic Associate:

E. Olsen, Professor,  
Code 560s, Root Hall, Room 201J,  
(408) 646-3163, AV 878-3163.

**Degree:** Requirements for the degree of Master of Arts in National Security Affairs are met en route to satisfying the skill requirements of the curricular program.

### FAR EAST, SOUTHEAST ASIA, PACIFIC CURRICULUM 682

Area Studies curricula focus on the history, culture, and religion of a specific region or country and provide students with a knowledge of current is-

sues, economic and political structures and institutions, military forces, including strategic capabilities and policy implications, and geopolitical influences.

**REQUIREMENTS FOR ENTRY**

Prospective students must be U.S. military officers or civilian employees of the U.S. Federal Government. Students must have a baccalaureate degree earned with above average academic performance and an APC of 365. College-level preparation in basic descriptive and inferential statistics is required.

**Entry Dates:** Area Studies are six quarter courses of study with entry dates in January and July. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

**FAR EAST, SOUTHEAST ASIA,  
PACIFIC  
SUBSPECIALTY**

Completion of the 682 curriculum qualifies an officer as a Far East, Southeast Asia, Pacific Subspecialist with a subspecialty code of XX22. The Curriculum Sponsor is OP-06, Chief of Naval Operations (Plans, Policy and Operations).

**Typical Jobs in this Subspecialty:**

- Chief of Staff  
COMNAVBASE GUAM
- Staff Negotiations Representative  
USCINCPAC REP  
PHILIPPINES
- Staff Operations and Plans  
CINCPACFLT
- Faculty Member  
DIC
- OP-635C Assistant for  
Military Sales  
OPNAV-FOREIGN MILITARY  
Analyst  
OPNAVSUPPACT,  
Washington, DC

**Academic Associate:**

E. Olsen, Professor,  
Code 56Os, Root Hall, Room 201J,  
(408) 646-3163, AV 878-3163.

**Degree:** Requirements for the degree of Master of Arts in National Security Affairs are met en route to satisfying the skill requirements of the curricular program.

**EUROPE AND USSR  
CURRICULUM 683**

Area Studies curricula focus on the history, culture, and religion of a specific region or country and provide students with a knowledge of current issues, economic and political structures and institutions, military forces, including strategic capabilities and policy implications, and geopolitical influences.

**EUROPE AND USSR  
SUBSPECIALTY**

Completion of the 683 curriculum qualifies an officer as a Europe/USSR Subspecialist with a subspecialty code of XX24. The Curriculum Sponsor is OP-06, Chief of Naval Operations (Plans, Policy and Operations).

**Entry Dates:** Area Studies are six quarter courses of study with entry dates in January and July. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

**Typical Jobs in this Subspecialty:**

- Staff Plan  
NATO
- ACOS for Plans  
SACLANT
- POL-MIL Planner  
Joint Chiefs of Staff
- Geopolitical Intelligence Office  
CINCUSNAVEUR LONDON
- Atlantic Allied Plans  
COMINSEWARCOM

Naval Coordinator  
 EUCOM  
 Staff Infrastructure Policy  
 SHAPE  
 Area Officer  
 DIA  
 NATO Strategic Concepts  
 OPNAV  
 Country Director Spain & Portugal  
 Office of Secretary of Defense

**REQUIREMENTS FOR ENTRY**

Prospective students must be U.S. military officers or civilian employees of the U.S. Federal Government. Students must have a baccalaureate degree earned with above average academic performance and an APC of 365. College-level preparation in basic descriptive and inferential statistics is required.

**Degree:** Requirements for the degree of Master of Arts in National Security Affairs are met en route to satisfying the skill requirements of the curricular program.

**Entry Dates:** International Organizations and Negotiations is a six quarter course of study with a single entry date in July. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

**REQUIREMENTS FOR ENTRY**

Prospective students must be U.S. military officers or civilian employees of the U.S. Federal Government. Students must have a baccalaureate degree earned with above average academic performance and an APC of 365. College-level preparation in basic descriptive and inferential statistics is required.

**INTERNATIONAL ORGANIZATIONS AND NEGOTIATIONS SUBSPECIALTY**

Completion of the 684 curriculum qualifies an officer as an International Organizations and Negotiations Subspecialist with a subspecialty code of XX25. The Curriculum Sponsor is OP-06, Chief of Naval Operations (Plans, Policy and Operations).

**Academic Associate:**

E. Olsen, Professor,  
 Code 56Os, Root Hall, Room 201J,  
 (408) 646-3163, AV 878-3163.

**Typical Jobs in this Subspecialty:**

- Liaison Officer
- PEP Bahamas
- Force Requirements/Programs Office
- SACLANT
- Representative for International Negotiations
- Joint Chiefs of Staff
- Intelligence Affairs Officer
- EUCOM US HQ
- Military Assistant
- U.S. Arms Control and Disarmament
- Ship Operations
- COMSC MED
- Head, Ocean Policy Branch
- OPNAV
- Chief
- DIA
- Assistant for Nuclear Negotiations
- OPNAV

**INTERNATIONAL ORGANIZATIONS AND NEGOTIATIONS CURRICULUM 684**

This curriculum focuses on the security relationships between the United States and other nation states. Courses address the implications of both governmental and non-governmental actions, the organization and structure through which relationships are conducted, and the development of international institutions and policies that provide guidelines for such interaction, including international law, the law of war, and the law of the sea.

Strategic Policy Planner  
Joint Chiefs of Staff

**Academic Associate:**

Frank M. Teti, Associate Professor,  
Code 56TT, Root Hall, Room 201,  
(408) 646-2528, AV 878-2528.

**Degree:** Requirements for the degree Master of Arts in National Security Affairs are met en route to satisfy the skill requirements of the curricula program.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

- NS 3022 International Context for Strategic Planning
- NS 3040 Politics of Global Economic Relations
- NS 3400 Domestic Context of Soviet National Security Policy
- NS 3900 International Organizations & Negotiations

**Quarter 2**

- NS 3012 Forecasting & Research Methods for Strategic Planning
- NS 3030 American National Security Policy/Defense Organization
- NS 3410 Soviet National Security
- NS 3902 Modern Revolution and Political Terrorism

**Quarter 3**

- NS 3230 Strategic Planning & US National Security Policy
- NS 3000 Military History: War in the Modern World
- NS 3960 International Law
- NS 4902 Seminar on Modern Revolution & Terrorism

**Quarter 4**

- NS 3452 The Navy in Soviet Strategy
- NS 4710 Seminar in Politics and Security Problems of Europe
- NS 3050 Maritime Strategy
- NS 4900 Seminar in International Negotiations

**Quarter 5**

- NS 4451 Advanced Topics in Soviet Naval Affairs
- NS 4660 Asia & the Soviet Union
- NS 4250 Problems of Security Assistance and Arms Transfers
- NS 0810 Thesis Research

**Quarter 6**

- NS 4901 Seminar in Ocean Policy
- NS 4500 Seminar in the National Interest
- NS 4950 Seminar in Arms Control and National Security
- NS 0810 Thesis Research

**WESTERN HEMISPHERE CURRICULUM 685**

Area Studies curricula focus on the history, culture, and religion of a specific region or country and provide students with a knowledge of current issues, economic and political structures and institutions, military forces, including strategic capabilities and policy implications, and geopolitical influences.

**REQUIREMENTS FOR ENTRY**

Prospective students must be U.S. military officers or civilian employees of the U.S. Federal Government. Students must have a baccalaureate degree earned with above average academic performance and an APC of 365. College-level preparation in basic descriptive and inferential statistics is required.

**WESTERN HEMISPHERE  
SUBSPECIALTY**

Completion of the 685 curriculum qualifies an officer as a Western Hemisphere Subspecialist with a subspecialty code of XX23. The Curriculum Sponsor is OP-06, Chief of Naval Operations (Plans, Policy and Operations).

**Typical Jobs in this Subspecialty:**

- Political Military Planner
- Joint Chiefs of Staff
- Executive Assistant
- Inter American Defense
- Air Antisubmarine Warfare/Plans
- COMSOLANTFOR
- Strategy and Policy Central and South Atlantic
- USCINCLANT
- Intelligence Analyst
- USCINSCO
- Area Officer
- DIA
- OP-613B1 CUBA/CARIBBEAN
- OPNAV
- Assistant for Military Sale
- OPNAV-FOREIGN MILITARY
- CTRY Director
- Office of Secretary of Defense
- OP-613 Assistant Branch Head
- South America

**Academic Associate:**

E. Olsen, Professor,  
Code 56Os, Root Hall, Room 201J,  
(408) 646-3163, AV 878-3163.

**Degree:** Requirements for the degree of Master in Arts in National Security Affairs are met en route to satisfying the skill requirements of the curricular program.

**Entry Dates:** Area Studies are six quarter courses of study with entry dates in January and July. If further information is needed, contact the Academic Associate or Curricular Officer for this curriculum.

**STRATEGIC PLANNING,  
GENERAL  
CURRICULUM 686  
STRATEGIC PLANNING,  
NUCLEAR  
CURRICULUM 687**

These curricula are designed to provide the student with an understanding of the generation and use of military power in support of national objectives, the process of U.S. strategic decision-making, and the deployment of military forces, including maritime nuclear strategic and theater forces in peacetime and under conditions of conventional and nuclear war.

**REQUIREMENTS FOR ENTRY**

Entrance is open to officers and civilian employees of the U.S. Federal Government eligible for a Top Secret clearance with access to Sensitive Compartmented Information based on a Special Background Investigation completed within the past five years. A baccalaureate degree earned with above average academic performance and a minimum APC of 335 are required.

**Entry Dates:** Strategic Planning is a six quarter course of study with entry dates in January and July. If further information is needed, contact the Academic Associate or the Curricular Officer of this curriculum.

**Academic Associate:**

Frank M. Teti, Associate Professor,  
Code 56Tt, Root Hall, Room 201,  
(408) 646-2528, AV 878-2528.

**STRATEGIC PLANNING  
SUBSPECIALTY**

Completion of the 686 or 687 curriculum qualifies an officer as a Strategic Planning Subspecialist with a subspecialty code of XX26 or XX27, respectively. The Curriculum Sponsor is OP-06, Chief of Naval Operations (Plans, Policy and Operations).

**Typical Jobs in this Subspecialty:**

International Plans  
COMCANLANT  
War Plans  
CINCUSNAVEUR  
Staff Plans  
SHAPE  
NATO Plans Officer  
COMSTRIKEFLTLANT  
Navy Plans Officer  
Special Operations

Nuclear Weapons/Air Warfare Instructor  
NUCWEAPTRAGRLANT/PAC  
SSBN Current Operations  
USCINCLANT  
Head Trident Strategic Weapons  
OPNAV

**Degree:** Requirements for the degree Master of Arts in National Security Affairs are met en route to satisfying the skill requirements of the curricular program.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

NS 3000 Military History: War in the Modern World  
NS 3022 International Context for Strategic Planning  
NS 3960 International Law and the Law of War  
NS 3400 Domestic Context of Soviet National Security Policy

**Quarter 2**

NS 3050 Maritime Strategy  
NS 3012 Forecasting & Research Methods for Strategic Planning  
NS 3030 American National Security Policy/Defense Organization  
NS 3410 Soviet National Security

**Quarter 3**

NS 3280 Nuclear Weapons and Foreign Policy  
NS 4280 Advanced Topics in Nuclear Strategy and Deterrence  
NS 3230 Strategic Planning and U.S. National Security Policy  
NS 3450 Soviet Military Strategy

**Quarter 4**

NS 4261 Survey of Strategic Studies  
NS 3902 Modern Revolution and Political Terrorism  
NS 4220 Threat Analysis and the Contemporary International Environment  
NS 3452 Navy in Soviet Strategy

**Quarter 5**

NS 3250 Defense Resources Allocation  
NS 4500 Seminar in the National Interest  
NS 4451 Advanced Topics in Soviet Naval Affairs

NS 4251 American National Security Objectives and Net Assessment  
NS 4950 Seminar on Arms Control and National Security  
NS 0810 Thesis Research

**INTELLIGENCE CURRICULUM 825**

This curriculum is a technical, interdisciplinary program integrating the study of political science, data analysis, aeronautical engineering, opera-

tions research, physics, electrical engineering, information systems, and oceanography into an understanding of intelligence.

Coursework addresses three broad fields: defense technology, analysis and management, and national secur-

ty affairs. Defense technology courses are designed to address the special problems of technical intelligence, emphasizing technical literacy. The analysis and management sequence provides a grounding in quantitative techniques and research methods. National security affairs courses address the interface between international politics and national security objectives.

**REQUIREMENTS FOR ENTRY**

Prospective students must be U.S. military officers or civilian employees of the U.S. Federal Government eligible for a Top Secret clearance with access to Sensitive Compartmented Information based on a Special Background Investigation completed within the past five years. They must have a baccalaureate degree earned with above average academic performance and a minimum APC of 334.

**Entry Dates:** Intelligence is a six quarter course of study with starting dates in April and October. In addition, all students will report for a math and physics refresher in mid February or mid August. If further information is needed, contact the Academic Associate or the Curricular Officer of this curriculum.

**INTELLIGENCE SUBSPECIALTY**

Completion of this curriculum qualifies an officer as an Intelligence Subspecialist with a subspecialty code of XX17. The Curriculum Sponsor is Naval Intelligence Command.

**Typical Jobs in this Subspecialty:**

- Operations Intelligence Analyst  
NAVOPINTCEN, Washington, DC
- Technical Intelligence  
COMNAVFOR JAPAN
- Naval Attache  
Attache USSR
- Commander Shore Activity  
NTIC, Washington, DC
- Staff Operations/Submarine Operations  
CINCUSNAVEUR LONDON
- Intelligence Officer  
COMSUBGRU
- Surface Analyst  
FOSIF ROTA/KAMISEYA
- Tactical Intelligence  
Office of the Secretary of Defense
- Intelligence Officer  
War College, Newport, RI
- Intelligence Production Analyst  
NORAD/ADCOM JNT SUPP

**Degree:** Requirements for the degree Master of Science in National Security Affairs are met en route to satisfying the skill requirements of the curricular program.

**Academic Associate:**

T. Grassey, Associate Professor,  
Code 56Gt, Root Hall, Room 201F,  
(408) 646-3450, AV 878-3450.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

- OC 2001 Ocean Systems
- NS 2154 Intelligence and the Military
- NS 3030 American National Security Policy/Defense Organization
- NS 3410 Soviet National Security

**Quarter 2**

- NS 3022 International Context for Strategic Planning
- SE 2002 Electromagnetic Systems
- NS 3450 Soviet Military Strategy
- EO 2790 Communications Systems

**Quarter 3**

- NS 3150 Intelligence Data Analysis and Research Methods
- OS 3002 Operations Research for Intelligence
- SE 3004 Weapons Systems Analysis
- NS 3151 Intelligence Systems and Products

**Quarter 4**

- NS 3000 Military History: War in the Modern World
- SS 3001 Space Systems Operations Management
- IS 3183 Information Systems
- SE 4006 Technical Assessment and Intelligence Systems

**Quarter 5**

- NS 3050 Maritime Strategy
- NS 3452 The Navy in Soviet Strategy
- NS 4251 American National Security Objectives and Net Assessment
- NS 0810 Thesis Research

**Quarter 6**

- NS 4250 Problems of Security Assistance and Arms Transfer
- NS 4451 Advanced Topics in Soviet Naval Affairs
- NS 4152 Problems of Intelligence and Threat Analysis
- NS 0810 Thesis Research

## NAVAL ENGINEERING PROGRAMS

### Curricular Officer

Dennis P. Mahoney, CDR, USN,  
Code 34, Halligan Hall, Room 220,  
(408) 646-2033, AV 878-2033.

### NAVAL ENGINEERING PROGRAMS CURRICULUM 570

The objective of this program is to provide graduate education, primarily in the field of Mechanical Engineering. The graduate will have the technical competence to operate and maintain modern warships and naval systems. He will be able to participate in technical aspects of naval systems acquisitions for technological advances in naval ships and systems. Through emphasis on the design aspect within the program, the graduate will be well prepared to apply these advances in technology to the warships of the future. An original research project resulting in a finished thesis is an integral part of the curriculum. The schedule of classes is arranged to provide time during the final two quarters for concentration in this area of specialization.

### REQUIREMENTS FOR ENTRY

A baccalaureate degree or its equivalent is required, preferably in an engineering discipline. A minimum academic profile code (APC) of 323 (334 via Engineering Science Curriculum 460) is required. This equates to a minimum grade point average of 2.20, with mathematics through differential and integral calculus, and one year of calculus based physics as non-waiverable requirements. The program is open to naval officers in the rank of LTJG through LCDR in the 11XX/14XX community, equivalent grade officers of other U.S. services, and qualified foreign military officers. DOD employees are also eligible. Current enrollment is approximately 115 students.

### NAVAL ENGINEERING SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Naval Engineering Specialist with a subspecialty code of XX54P. The Curriculum Sponsor is Naval Sea Systems Command. A limited number of particularly well qualified students may be able to further their education beyond the Master's Degree and seek the degree of Mechanical Engineer and a XX54N Subspecialty Code.

### Typical Subspecialty Assignments:

Upon award of the XX54P subspecialty code, the officer becomes eligible for assignment to those billets identified as requiring graduate education in Naval Engineering. Typical of these billets are the following:

- Industrial Activities — Shipyard,  
SUPSHIP, Ship Repair Facility
- Mechanical Engineering Instructor,  
USNA
- Tender Repair Officer (Engineering  
Duty Officer)
- Fleet/Type Commander Staff, SIMA
- Board of Inspection and Survey
- Propulsion Examining Board

**Entry Dates:** Naval Engineering is an eight quarter course of study with entry dates four times per year. For Engineering Duty Officers, the program is nine quarters long. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

**Academic Associate:**

**Chairman:**

Turgut Sarpkaya, Distinguished Professor,  
Code 69SI, Halligan Hall, Room M2,  
(408) 646-3425, AV 878-3425.

**Degree:** Requirements for the degree Master of Science in Mechanical Engineering are met as a milestone en route to satisfying the educational skill requirements of the curricular Program.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

MA 1118 (5-2) Multivariable Calculus  
EC 2170 (4-2) Intro to Electrical Engr  
ME 2101 (4-1) Thermodynamics  
ME 2501 (3-0) Statics

**Quarter 5**

ME 2410 (2-3) Mechanical Engineering Lab  
MS 3201 (3-2) Materials Science  
ME 3220 (3-2) Auxiliary & Turbo-machinery  
ME 3711 (4-1) Design of Machine Elements

**Quarter 2**

MA 2047 (4-0) Linear Algebra & Vector Analysis  
ME 2440 (3-0) Methods of Engr Computation  
ME 2441 (0-2) Engr Computational Lab  
ME 2502 (4-1) Dynamics  
ME 2601 (3-2) Solid Mechanics I

**Quarter 6**

MA 3243 (3-2) Numerical Methods for PDEs  
MS 3202 (3-2) Failure Analysis  
ME 3521 (3-2) Vibrations  
ME 3240 (3-0) Reciprocating & Gas Turbine Power Plants  
ME 3241 (0-3) Marine Engr Lab

**Quarter 3**

MA 2121 (4-0) Ordinary Differential Equations  
ME 2201 (3-2) Intro to Fluid Mechanics  
ME 2801 (3-2) Intro to Engineering Systems  
ME 3611 (4-0) Solid Mechanics II

**Quarter 7**

ME 3230 (3-1) Nuclear Power Systems  
ME 4XXX Elective  
ME 4XXX Elective  
ME 0810 Thesis  
ME 0810 Thesis

**Quarter 4**

MA 3132 (4-0) Partial Differential Equations  
ME 3150 (4-2) Heat Transfer  
ME 3201 (3-2) Intermediate Fluid Mechanics  
ME 3801 (3-0) Linear Automatic Controls  
ME 3802 (0-2) Mechanical Engineering Controls Lab

**Quarter 8**

EC 3370 (3-2) Electromechanical Energy Conversion  
\* ME 4XXX Elective  
ME 0810 Thesis  
ME 0810 Thesis

\*Additionally, Engineering Duty Officers take ME 2301 (Introduction to Naval Architecture) and OS 3104 (Statistics for Science and Engineering) in the standard nine quarter program.

## OPERATIONS ANALYSIS PROGRAMS

### Curricular Officer

Roger Stemp, LCDR, USN,  
Code 30, Root Hall, Room 232,  
(408) 646-2786, AV 878-2786.

### OPERATIONS ANALYSIS CURRICULUM 360

This program provides education in the application of quantitative analyses to operational, tactical, and managerial problems. The disciplines of mathematics, probability, statistics, economics, human factors, physical science, and optimization which the officer student learns here, or brings with him, supply the theoretical background for analyzing alternative choices in tactical and strategic warfare and in planning, budgeting and procurement of systems and forces. The course of study generates computational capability and develops skills in identifying relevant information, generating decisions criteria, and selecting alternatives. This education enhances performance in all duties throughout a military career, including operational billets, technical management assignments and policy making positions.

### REQUIREMENTS FOR ENTRY

A baccalaureate degree with above average grades in mathematics is required. Completion of mathematics through single variable differential and integral calculus is considered minimal preparation. A one year course in college physics is highly desired. Students lacking these quantitative prerequisites will be accepted, in certain cases, where their undergraduate records indicate that they are exceptional students and there are other possible indicators of success such as Graduate Record Examination scores, correspondence or extension courses in quantitative subjects, and outstanding motivation for the program. An APC of 324 is required.

### OPERATIONS ANALYSIS SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Operations Analysis Subspecialist with a subspecialty code of XX42P. The Curriculum Sponsor is OP-81, Program Resource Appraisal Division.

### Typical Jobs in this Subspecialty:

Destroyer Squadron Chief Staff  
Officer  
OPNAV Air Warfare Program  
Analyst  
JCS Analyst  
Director OPS Research,  
SACLANT  
Asst Staff OPS/PLANS,  
COMCARGRU  
Staff OPS & PLANS,  
COMTHIRDFLT

**Entry Dates:** Operations Analysis is an eight quarter course of study with entry dates in April and October. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

### Academic Associate:

James D. Esary, Professor,  
Code 55Ey, Root Hall, Room 273,  
(408) 646-2780, AV 878-2780.

**Degree:** Requirements for the degree Master of Science in Operations Research are met as a milestone en route to satisfying the skill requirements of the curricular program.

**TYPICAL COURSE OF STUDY**

**Quarter 1**

- OA 2200 (4-1) Computational Methods for Operations Research II
- MA 1118 (5-2) Multivariable Calculus
- MA 2042 (4-0) Linear Algebra
- OA 3101 (4-1) Probability

**Quarter 2**

- OA 3200 (4-0) Computational Methods for Operations Research III
- MA 3110 (4-0) Topics in Intermediate Analysis
- SE 3301 (4-0) Radiating Systems
- OA 3102 (4-1) Probability and Statistics

**Quarter 3**

- OA 3201 (4-0) Linear Programming
- OA 3401 (4-0) Human Factors in Systems Design I
- OA 3301 (4-0) Stochastic Models I
- OA 3103 (4-1) Statistics

**Quarter 4**

- OA 4201 (4-0) Nonlinear Programming
- AS 3610 (4-0) Economic Analysis and Operations Research
- OA 3302 (4-0) Systems Simulation
- OA 3104 (3-1) Data Analysis

**Quarter 5**

- (First six weeks)
- OA 3601 (4-1) Combat Model and Games
- AS 3611 (4-1) Planning and Capital Allocation in the Department of Defense
- (Last six weeks)
- EXPERIENCE TOUR OFF CAMPUS

**Quarter 6**

- OA 4604 (4-0) Wargaming Analysis
- OA 3602 (4-0) Search Theory and Detection
- OA 4301 (3-2) Stochastic Models II
- OA 0810 (0-0) Thesis Research

**Quarter 7**

- OA 4603 (3-2) Test and Evaluation
- OA 0810 (0-0) Thesis Research
- OA 4202 (4-0) Network Flows & Graphs
- OA XXXX Elective

**Quarter 8**

- OA 4602 (4-0) Campaign Analysis
- OA 0810 (0-0) Thesis Research
- OA XXXX Elective
- OA XXXX Elective

**OPERATIONAL LOGISTICS CURRICULUM 361**

This program provides education in mathematics, probability and statistics, physical science, economics, logistics and computer science. These disciplines supply the theoretical background for analyzing alternative choices in planning for sustainability of Naval Forces involved in long range deployments.

The course of study generates computational capability and develops skills in identifying relevant information, generating decision criteria, and selecting alternatives. This education enhances performance in all duties throughout a military career, including operational billets, technical management assignments, and policy making positions.

**OPERATIONAL LOGISTICS SUBSPECIALTY**

Completion of this curriculum qualifies an officer as an Operations Logistics Subspecialist with a subspecialty of XX43P. The curriculum sponsor is OP-04, Office of Chief of Naval Operations (Logistics).

**Typical Jobs in this Subspecialty:**

- ACOS, SACLANT
- LOG, PLANS, CINCUSNAVEUR
- LOG, PLANS, CINCPACFLT
- OPNAV Fleet Mobilization
- JCS Logistics
- Warfare Analyst, NSURFWPC
- OSD Analyst
- USCINPAC Analyst
- Head Special Studies, Strategic Systems Project Officer
- VX-1 Analyst
- War College Professor

**REQUIREMENTS FOR ENTRY**

A baccalaureate degree with above average grades in mathematics is required. Completion of mathematics through single variable differential and integral calculus is considered minimal preparation. A one year course in college physics is highly desired. Students lacking these quantitative prerequisites will be accepted, in certain cases, where their undergraduate records indicate that they are exceptional students and there are other possible indicators of success such as Graduate Record Examination scores, correspondence or extension courses in quantitative subjects, and outstanding motivation for the program.

**Entry Date:** Operational Logistics is an eight quarter course of study with a single entry date in October. If further information is needed, contact the Academic Associate for this curriculum.

**Academic Associate:**

David A. Schradly, Professor,  
Code 55So, Root Hall, Room 225,  
(408) 646-2801, AV 878-2801.

**Degree:** Requirements for the degree Master of Science in Operations Research are met as a milestone en route to satisfying the skill requirements of the curricular program.

**TYPICAL COURSE OF STUDY****Quarter 1**

- OA 2200 (4-1) Computational Methods for Operations Research II
- MA 1118 (5-2) Multivariable Calculus
- MA 2042 (4-0) Linear Algebra
- OA 3101 (4-1) Probability

**Quarter 2**

- OA 3200 (4-0) Computational Methods for Operations Research III  
Operations Analysis
- MA 3110 (4-0) Topics in Intermediate Analysis
- OA 3610 (4-0) Introduction to Naval Logistics
- OA 3102 (4-1) Probability and Statistics

**Quarter 3**

- OA 3201 (4-0) Linear Programming
- MN 4373 (4-0) Transportation Management II
- OA 3301 (4-0) Stochastic Models I

- OA 4301 (3-2) Stochastic Models II

## WEAPONS ENGINEERING PROGRAMS

### Curricular Officer

Milo J. Kilmer, II, CDR, USN,  
Code 33, Spanagel Hall, Room 328,  
(408) 646-2116/7, AV 878-2116/7.

### WEAPONS SYSTEMS ENGINEERING CURRICULUM 530

This program is designed to meet the needs of the military services for an officer having a strong broad-based technical education with particular applications toward weapons systems. The fundamental task of the Weapons Engineering subspecialty community is the design, development, test and evaluation, acquisition, operation and support of naval weapons systems. In support of this career pattern, the objective of these curricula is to provide advanced technical education on a broad foundation encompassing the basic scientific, analytic and engineering principles underlying the field of naval weaponry. The specific areas of study and the levels of expertise to be attained are formulated to insure a sound basis for technical competence and for subsequent growth as may be required to support the fundamental task of the community.

### REQUIREMENTS FOR ENTRY

A baccalaureate degree with mathematics through differential and integral calculus and a calculus-based basic physics sequence are required for direct input. Courses in the physical sciences and engineering are highly desirable. Officers not having the required qualifications for direct input enter the program indirectly through the Engineering Science Curriculum discussed elsewhere in this catalog. An APC of 323 is required.

### WEAPONS SYSTEMS ENGINEERING SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Weapons Systems Engineering Subspecialist with a subspecialty code of XX61. The Curriculum Sponsor is Naval Sea Systems Command Headquarters.

#### Typical Jobs in this Subspecialty:

NTDS-CIC

FLTCOMBDSSA, San Diego, CA  
Warfare Systems Officer  
SPAWAR OPSUPFLD 6

Weapons Instructor

Naval Academy, Annapolis, MD  
Staff Readiness (Weapons)

COMCRUDESGRU 1,2,3,5,8,12

Testing Officer

COMOPTEVFOR

Weapons Instructor

SWOSCOLCOM

**Entry Dates:** Weapons Engineering is a nine quarter course of study with entry dates in April and October. If further information is needed, contact the Academic Associate for this curriculum.

#### Academic Associate:

James V. Sanders, Assoc. Prof.,  
Code 61Sd, Spanagel Hall, Rm. 146B,  
(408) 646-2931/2116, AV 878-2931/  
2116.

**Degree:** Requirements for the degree Master of Science in Engineering Science are met as a milestone en route to satisfying the skill requirements of the curricular program. On a case-by-case basis, some students, depending on background, may earn a Master of Science in Physics, Computer Science or one of the engineering disciplines.

## TYPICAL COURSE OF STUDY

### Quarter 1

- PH 1121 (4-2) Basic Physics I:  
Mechanics
- MA 1118 (5-2) Multivariable Calculus
- MA 2047 (4-1) Linear Algebra and  
Vector Analysis
- CS 2970 (5-0) PASCAL

### Quarter 2

- PH 1322 (4-1) Physics II: Electricity  
and Magnetism
- MA 2121 (4-0) Differential Equations
- EC 2810 (3-2) Digital Machines
- OS 3104 (4-0) Statistics

- XX 0810 Thesis
- XX 0810 Thesis

## WEAPONS SYSTEMS SCIENCE CURRICULUM 531

This program is designed to meet the needs of the military services for officers who have a strong broad-based technical education with graduate emphasis in engineering physics and its applications.

In addition to introductory and core courses, all students in this curriculum take courses in electromagnetic phenomena, statistical physics, quantum physics, solid state physics and combat simulation. In-depth option sequences of two or more courses are offered wherein students specialize in

a particular area of physics. Students also engage in thesis research in an area related to these advanced studies.

## REQUIREMENTS FOR ENTRY

A baccalaureate degree with mathematics through differential and integral calculus and a calculus-based basic physics sequence are required for direct input. Courses in the physical sciences and engineering are highly desirable. Officers not having the required qualifications for direct input enter the program indirectly through the Engineering Science curriculum.

Officers may enhance their selectability by taking off-campus courses, including participation in the Postgraduate School Continuing Education program. An APC of 323 is required.

**WEAPONS SYSTEMS SCIENCE  
SUBSPECIALTY**

Completion of this curriculum qualifies an officer as a Weapons Systems Science Specialist with a subspecialty code of XX63. The Curriculum Sponsor is Naval Sea Systems Command Headquarters.

**Typical Jobs in this Subspecialty:**

- Weapons Department Head  
Naval Academy, Annapolis, MD
- Research Associate  
Lawrence Livermore Laboratory  
(6)
- Physics Instructor  
Naval Academy, Annapolis, MD
- Research Associate  
Los Alamos National Laboratory

- Electro-Optics Project Officer  
Naval Ocean Systems Center,  
San Diego, CA
- Testing Officer  
COMOPTEVFOR
- Research Officer  
Naval Research Laboratory  
Project Management  
Naval Sea Systems Command (4)

**Entry Dates:** Weapons Systems Science is a nine quarter course of study with entry dates in April and October. If further information is needed, contact the Academic Associate for this curriculum.

**Academic Associate:**

- James V. Sanders, Assoc. Prof.,  
Code 61Sd, Spanagel Hall, Rm. 146B,

**NUCLEAR PHYSICS  
(WEAPONS & EFFECTS)  
CURRICULUM 532**

This program is designed to meet the needs of the naval service for officers who have a broad technical education with a graduate specialization in the physics of nuclear weapons and weapons effects. The graduate specialization sequence consists of a series of courses in the area of nuclear physics, effects of nuclear explosions, hardening technologies and nuclear warfare analysis. Students can also take elective courses in this or related areas and are expected to engage in thesis research in their field of specialization.

**REQUIREMENTS FOR ENTRY**

A baccalaureate degree with mathematics through differential and integral calculus and a calculus-based basic physics sequence are required for direct input. Courses in the physical sciences and engineering are highly desirable. Officers not having the required qualifications for direct input enter the program indirectly through the Engineering Science Curriculum discussed elsewhere in this catalog.

Officers may enhance their selectability by taking off-campus courses, including participation in the Postgraduate School Continuing Education program which has been outlined earlier in the catalog. An APC of 323 is required.

**NUCLEAR PHYSICS  
SUBSPECIALTY**

Completion of this curriculum qualifies an officer as a Nuclear Physics (Weapons & Effects) Subspecialist with a subspecialty code of XX67. The Curriculum Sponsor is OP-981N, Headquarters, Nuclear Branch.

**Typical Jobs in this Subspecialty:**

Test Manager

Defense Nuclear Agency (DNA)  
Research & Development

Coordinator

Defense Nuclear Agency (DNA)  
Physicist

Defense Nuclear Agency (DNA)  
Tactical Nuclear Weapons/Plans  
CINCLANT (2)

Test Officer/Programs Officer  
DNA, Dirkland AFB (2)

Navy Research Officer

Los Alamos National Laboratory  
(3)

Navy Research Officer

## UNDERWATER ACOUSTIC SYSTEMS CURRICULUM 535

Underwater Acoustic Systems is an interdisciplinary program. Courses are drawn principally from the fields of physics, electrical engineering, computer science and mathematics. Although broadly based, the emphasis is on underwater acoustics and signal processing applications to undersea warfare. As can be seen in the follow-

ing list, courses included relate to the generation and propagation of sound in the ocean, military applications of underwater sound and the electrical engineering and computer science aspects of signal processing in sonar systems. Also included are topics concerning the effects of the noise environment on people.

### REQUIREMENTS FOR ENTRY

A baccalaureate degree with mathematics through differential and inte-

Integral calculus and a calculus-based basic physics sequence are required for direct input. Courses in the physical sciences and engineering are highly desirable. Officers not having the required qualifications for direct input enter the program indirectly through the Engineering Science Curriculum discussed elsewhere in this catalog.

Officers may enhance their selectability by taking off-campus courses, including participation in the Postgraduate School Continuing Education program which has been outlined earlier in the catalog. An APC of 323 is required.

**UNDERWATER ACOUSTICS  
SUBSPECIALTY**

Completion of this curriculum qualifies an officer as an Underwater Acoustics Subspecialist with a subspecialty code of XX56. The Curriculum Sponsor is Naval Sea Systems Command/Commander Space and Naval Warfare Systems Command.

**Typical Jobs in this Subspecialty:**

- Physics Instructor  
Naval Academy, Annapolis, MD  
OP-981N  
OPNAV  
Instructor  
Naval Postgraduate School,  
Monterey, CA

- Training Officer  
PDW-124 (Undersea Surveillance)  
Staff  
Commander 7th Fleet  
Staff  
COMNAVSURFLANT  
Test & Evaluation Officer  
OPTEVFOR  
Strategic Systems Project Officer  
Director of SSPO

**ADVANCED SCIENCE  
(APPLIED MATHEMATICS)  
CURRICULUM 380**

This program is designed to meet the needs of the Department of Defense for graduates who are skilled in the concepts of higher mathematics. The objective of the program is to equip an officer with the skill to: analyze a physical, engineering, managerial, or tactical problem; formulate it in mathematical terms; solve or approximate the solution to the mathematical problem; interpret the solution in the framework of the original problem, and present the results.

Completion of this curriculum also qualifies an officer as an Applied Mathematics Subspecialist with a subspecialty code of XX41. The curriculum sponsor is the U.S. Naval Academy Department of Mathematics. The typical job in this subspecialty is an instructor in mathematics at the U.S. Naval Academy or the U.S. Military Academy at West Point.

**REQUIREMENTS FOR ENTRY .**

Preparatory to graduate work in ap-

## CURRICULA CONDUCTED AT OTHER UNIVERSITIES

The Navy's fully-funded graduate education program supports 71 subspecialties. This involves 78 curricula, 42 at NPS and 36 at over 62 civilian institutions. Programs available at NPS are not offered at civilian institutions. Approximately 20% of the fiscal year officer graduate education assignments are slated for these universities. Where more than one school is listed for a particular curriculum, subspecialty education placement officers plan quota distribution.

In order to qualify for the Civilian Institutions Program, officers must be PG School selected and must meet all the requirements of the Civilian Institution.

Inquiries concerning curricula conducted at other universities should be directed to Manager, Civilian Institutions Program, Naval Postgraduate School, Monterey, CA 93943. Telephone (408) 646-2319 or Autovon 878-2319. Detailed information and the list of approved civilian institutions for the above curricula may be found in OPNAVNOTE 1520.

# ACADEMIC DEPARTMENTS AND COURSE DESCRIPTIONS

## DEPARTMENT OF ADMINISTRATIVE SCIENCES

**Tarek Abdel-Hamid**, Assistant Professor of Management Information Systems (1986); PhD, MIT Sloan School of Management, 1984.

**Kent Harry Allison**, Commander, U.S. Navy, Assistant Professor of Management and Finance (1987); DPA, University of Southern California, 1982.

**Dan Calvin Boger**, Associate Professor of Economics (1979); PhD, University of California at Berkeley, 1979.

**Tung Xuan Bui**, Associate Professor of Management Information Systems (1984); PhD, New York University, 1985.

**Paul Marshman Carrick**, Associate Professor of Economics (1969); PhD, University of California at Berkeley, 1956.

**William Howard Church**, Professor Emeritus (1956); MSPA, University of Southern California, 1941.

**Alice Crawford**, Adjunct Professor of Psychology (1988); MA, San Diego State University, 1973.

**John Wallis Creighton**, Professor Emeritus (1967); PhD, University of Michigan, 1954.

**Leslie Darbyshire**, Professor Emeritus (1961); University of Washington, 1957.

**Daniel Roy Dolk**, Associate Professor of Management Information Systems (1982); PhD, University of Arizona, 1982.

**Cynthia Helen Dresser**, Adjunct Professor of English as a Second Language (ESL) (1989); MS, Monterey Institute of International Studies, 1987.

**Glenn D. Eberling**, Commander, U.S. Navy, Instructor in Financial Management (1988); MS, Naval Postgraduate School, 1982.

**Mark Jan Eitelberg**, Associate Professor of Public Administration (1982); PhD, New York University, 1979.

**Dick Elster**, Professor of Business Administration (1969); PhD, University of Minnesota, 1967.

**Carson Kan Eoyang**, Associate Professor of Management (1974); PhD, Stanford University, 1976.

**Kenneth James Euske**, Associate Professor of Accounting (1978); PhD, Arizona State University, 1978.

**Roger Dennis Evered**, Professor of Management (1979); PhD, University of California at Los Angeles, 1973.

**Gail L. Fann**, Adjunct Professor of Management Communications (1989); PhD, Arizona State University, 1986.

## ADMINISTRATIVE SCIENCES

---

- James Morgan Fremgen**, Professor of Accounting (1965); DBA, Indiana University, 1961.
- Barry Albert Frew**, Adjunct Professor of Information Systems (1984); MS, Naval Postgraduate School, 1984.
- William R. Gates**, Adjunct Professor of Economics (1988); PhD, Yale University, 1984.
- Rudolpho Gonzales**, Adjunct Professor of Economics (1987); PhDC, University of California at Davis, 1974.
- Linda Gorman**, Adjunct Professor of Economics (1988); University of Pittsburgh, 1982.
- William James Haga**, Adjunct Professor of Management Information Systems (1988); PhD, University of Illinois, 1972.
- E. Neil Hart**, CDR, U.S. Navy, Instructor in Acquisition Contracting (1988); MS, Naval Postgraduate School, 1985.
- David Richard Henderson**, Associate Professor of Economics (1984); PhD, University of California at Los Angeles, 1976.
- Fenn Clark Horton**, Associate Professor of Economics (1964); PhD, Claremont Graduate School, 1968.
- Carl Russell Jones**, Professor of Information and Telecommunications Systems (1965); PhD, Claremont Graduate School, 1965.
- Lawrence R. Jones**, Professor of Financial Management and Budgeting (1987); PhD, University of California at Berkeley, 1977.
- Magdi Nessim Kamel**, Assistant Professor of Management Information Systems (1988); PhD, University of Pennsylvania, The Wharton School, 1988.
- Melvin Bernard Kline**, Professor Emeritus (1970); University of California at Los Angeles, 1966.
- Robert Lewis Knight**, Lieutenant Commander, U.S. Navy, Instructor in Management Information Systems (1988); MS, Naval Postgraduate School, 1985.
- David Vincent Lamm**, Adjunct Professor of Acquisition and Contract Management (1978); DBA, George Washington University, 1976.
- Shu Sheng Liao**, Professor of Accounting (1977); PhD, University of Illinois, 1971.
- Danny Gerald Matthews**, Lieutenant Commander, U.S. Navy, Assistant Professor in Accounting (1986); MS, Naval Postgraduate School, 1983.
- Jerry Lee McCaffery**, Professor of Public Budgeting (1984); PhD, University of Wisconsin, 1972.
- Martin J. McCaffrey**, Adjunct Professor of Contracting and Acquisition and Management Information Systems (1988); MS, Naval Postgraduate School, 1985.
- Alan Wayne McMasters**, Professor of Operations Research and Administrative Sciences (1965); PhD, University of California at Berkeley, 1966.
- Stephen Louis Mehay**, Professor of Labor Economics (1985); PhD, University of California at Los Angeles, 1973.
- Thomas Preston Moore**, Assistant Professor of Management Science (1986); PhD, Virginia Polytechnic Institute and State University, 1985.

- Orrin Douglas Moses**, Associate Professor of Accounting (1985); PhD, University of California at Los Angeles, 1983.
- Benjamin J. Roberts**, Adjunct Professor of Management and Human Resource Development (1985); PhD, Pennsylvania State University, 1977.
- Nancy Charlotte Roberts**, Associate Professor of Strategic Management (1986); PhD, Stanford University, 1983.
- Leon R. Sahlman**, Adjunct Instructor in Management Information Systems (1988); MS, Golden Gate University, 1988.
- Joseph Girard San Miguel**, Professor of Accounting (1982); PhD, University of Texas, 1972.
- Norman Floyd Schneidewind**, Professor of Information Sciences (1971); DBA, University of Southern California, 1966.
- John David Senger**, Professor Emeritus (1957); PhD, University of Illinois, 1965.
- Raymond William Smith**, Lieutenant Commander, U.S. Navy, Assistant Professor in Acquisition and Contract Management (1985); MS, Naval Postgraduate School, 1982.
- Loren Michael Solnick**, Associate Professor of Labor Economics (1985); PhD, Cornell University, 1973.
- Joo-Seok Song**, Assistant Professor of Management Information Systems (1988); PhD, University of California, Berkeley, 1988.
- James Edward Suchan**, Associate Professor of Management Communications (1986); PhD, University of Illinois, 1980.
- Myung Suh**, Adjunct Professor of Management Information Systems (1989); PhD, University of Rochester, 1989.
- Donald E. Summers**, Major, U.S. Marine Corps, Instructor in Financial Management (1989); MS, Naval Postgraduate School, 1985.
- Katsuaki Terasawa**, Adjunct Professor of Economics and Policy Analysis (1989); PhD, University of Kansas, 1971.
- George William Thomas**, Associate Professor of Economics (1978); PhD, Purdue University, 1971.
- Kenneth W. Thomas**, Professor of Administrative Sciences (1987); PhD, Purdue University, 1971.
- Dan Trietsch**, Associate Professor of Operations Management and Logistics (1987); PhD, TelAviv University, 1983.
- Ronald Alfred Weitzman**, Associate Professor of Psychology (1971); PhD, Princeton University, 1959.
- David Richard Whipple, Jr.**, Professor of Economics and Policy Analysis (1971); PhD, University of Kansas, 1971.
- Leslie John Zambo**, Adjunct Professor of Financial Management (1986); PhD, University of Texas, 1981.
- Moshe E. Zviran**, Assistant Professor of Management Information Systems (1988); PhD, TelAviv University, 1988.

**Chairman:**

David R. Whipple, Professor,  
Code 54, Ingersoll Hall, Room 229,  
(408) 646-2161, AV 878-2161.

**Associate Chairman:**

**Operations:**

George W. Thomas, Assoc. Prof.,  
Code 54Te, Ingersoll Hall, Room 243,  
(408) 646-2741, AV 878-2741.

**Research:**

Shu S. Liao, Professor,  
Code 54Lc, Ingersoll Hall, Room 302,  
(408) 646-2505, AV 878-2505.

**Instruction:**

Daniel R. Dolk, Assoc. Prof.,  
Code 54Dk, Ingersoll Hall, Room 316,  
(408) 646-2260, AV 878-2260.

The Department of Administrative Sciences has primary responsibility for three academic programs, and awards three graduate degrees. The largest program is a group of curricula in Administrative Sciences. These curricula include Acquisition and Contract Management, Financial Management, Manpower/Personnel/Training Analysis, Material Logistics Support, Systems Inventory Management, and Transportation Management. Graduates of these curricula are awarded the degree Master of Science in Management. The Administrative Sciences curricula are accredited by the National Association of Schools of Public Affairs and Administration.

Next largest is the Computer Systems Management Curriculum, whose graduates receive the Master of Science in Information Systems. Finally, the Telecommunications Systems Management Curriculum leads to the degree Master of Science in Telecommunications Systems Management.

The Department has three micro-computer laboratories for instructional and research purposes.

**MASTER OF SCIENCE  
IN INFORMATION SYSTEMS**

A candidate for the degree of Master of Science in Information Systems must successfully complete or validate core courses in each of the following disciplines:

- Accounting and financial management
- Organization sciences
- Information Systems
- Computer Science
- Economics
- Management theory and practice
- Quantitative methods

In addition, each candidate's curriculum must include the successful completion of 48 quarter hours of graduate-level course work and an acceptable thesis or project. At least 12 quarter hours of the course work must be at the 4000 level. Further, this graduate-level course work must include at least 24 quarter hours in Administrative Sciences and at least 16 quarter hours in Computer Science.

The candidate's program must be approved by the Chairman of the Department of Administrative Sciences.

**MASTER OF SCIENCE  
IN MANAGEMENT**

The degree Master of Science in Management requires:

a. Completion or validation of the Management Fundamentals program, which consists of a total of 32 quarter hours of 2000 and 3000 level courses, including a minimum of the following hours by disciplines:

- Accounting and financial management 6
- Economics 6
- Organization and management 6
- Quantitative methods 8

b. In addition to the above, completion of a minimum of 48 hours of graduate-level courses, at least 12 hours of which are at the 4000 level.

c. The completion of an approved sequence of courses in the student's area of concentration.

d. The submission of an acceptable thesis on a topic previously approved by the Department of Administrative Sciences.

e. Final approval of a program from the Chairman, Department of Administrative Sciences.

**MASTER OF SCIENCE  
IN  
TELECOMMUNICATIONS  
SYSTEMS MANAGEMENT**

The degree of Master of Science in Telecommunications Systems Management will be awarded at the completion of an interdisciplinary program that satisfies the following requirements:

a. A minimum of 56 quarter hours of graduate-level work, of which at least 12 quarter hours must represent courses at the 4000 level.

b. The program must consist of a minimum of graduate-level credit as follows:

Administrative sciences and quantitative methods	40
Communication systems and computer science	16

c. In addition to the 56 quarter hours of graduate-level course credit, an acceptable thesis must be completed. Each thesis shall have an advisor and a second reader, at least one of whom must be from the Department of Administrative Sciences.

d. The program must be approved by the Chairman of the Department of Administrative Sciences.

**DEPARTMENTAL COURSE  
OFFERINGS**

**AS1501 COMMUNICATION SKILLS  
FOR INTERNATIONAL STUDENTS (4-0)**

A course to increase ability and comprehension in communication and academic skills in English through guided practice and individ-

ual help in speaking, listening, reading, writing, and oral presentations. Open only to Allied Officers.

Upper Division or Graduate Courses

**AS3610 ECONOMIC ANALYSIS AND OPERATIONS RESEARCH (4-0).**

A presentation of basic economic concepts involved in the decision processes of individuals and groups faced with scarcity of resources. Topics covered include consumer theory and demand, individual behavior under uncertainty, output and input market structures, partial and general equilibrium analysis, and market imperfections and welfare analysis. **PREREQUISITES:** MA 2042, MA 2110 (concurrently), and OA 3201 (concurrently).

**AS3611 PLANNING AND CAPITAL ALLOCATION IN THE DEPARTMENT OF DEFENSE (4-1).**

Extension of concepts discussed in AS 3610 to allocation of resources over time. Covered are models of consumption and production over time, optimal investment decision rules and investment under uncertainty. Models of welfare economics and cost-benefit analysis are presented. Cost effectiveness and costing models from current practices in DOD are examined. Institutional procedures and processes such as PPBS, FYDP, and weapons systems acquisition are also discussed. **PREREQUISITES:** AS 3610 and OA 3103.

Graduate Courses

**AS4601 DECISION MAKING IN COMMAND (4-0).**

This course will focus on the processes and mechanisms of decision making in military organizations, especially in the context of war. After a review of concepts, theories, and models relevant to decision making in organizations, the course will analyze the

nature of and constraints on command and control in military organizations. Also, a comparison will be made of the consequences of different organization structures on decision making and implementation, technology, organization design, and conflict resolution. PREREQUISITES: CM 3111 and OS 3636 (or equivalent).

**AS4613 THEORY OF SYSTEMS ANALYSIS (4-0).**

Systems analysis (cost-effectiveness analysis) formulated as commensurable and incommensurable physical capital investment choice models. Emphasis on decision rules and the nature of opportunity costs with respect to scale and timing of investment. Interpretation of methods of risk, modeling, and solution computation. Theory of the second best: theory of the social discount rate. Introduction to models planning and control emphasizing decentralization of the decision making problem. PREREQUISITES: AS 3611 and OA 4201 (concurrently).

**TELECOMMUNICATIONS SYSTEMS MANAGEMENT COURSES**

**CM0001 SEMINAR FOR TELECOMMUNICATION SYSTEMS MANAGEMENT STUDENTS (0-2).**

Guest lectures. Thesis and research presentations.

**CM0810 THESIS RESEARCH FOR TELECOMMUNICATIONS SYSTEMS MANAGEMENT STUDENTS (0-0).**

Every student conducting thesis research will enroll in this course.

Upper Division or Graduate Courses

**CM3001 MICROECONOMICS FOR TELECOMMUNICATIONS (4-0).**

Fundamentals of resource allocations in a market based economic system. Emphasis

is on basic cost and value concepts, oligopolistic and monopolistic industry behavior, and regulation of industry behavior. Examples for Telecommunications are employed. PREREQUISITES: MA 1117 (or equivalent), MN 2155.

**CM3002 ECONOMIC EVALUATION OF TELECOMMUNICATIONS SYSTEMS (4-0).**

Study of economic evaluation concepts and methods for Telecommunications Systems. Topics include cost-performance (value) analyses, capacity choice, and allocating telecommunications services by pricing mechanisms. PREREQUISITES: CM3001, OS3005.

**CM3111 C3 MISSION AND ORGANIZATION (4-0).**

A survey of command, control, and communications organizations within OSD, JCS, and the Service Headquarters. Execution of National Strategic Nuclear Policy and planning for joint employment of general purpose forces are discussed. Service combat organization and service tactical C3 systems are covered. Emphasis is on description of existing C3 organizations and systems, with brief historical perspective. PREREQUISITE: SECRET clearance.

**CM3112 NAVY TELECOMMUNICATIONS SYSTEMS (4-0).**

Description of the Naval Telecommunications Systems, with emphasis on the organization and management control and operational direction of the facilities. Current subsystems are described in detail. PREREQUISITES: SECRET clearance and CM 3111 or permission of the instructor.

Graduate Courses

**CM4003 SEMINAR IN TELECOMMUNICATIONS SYSTEMS MANAGEMENT (V-0).**

Study of a variety of topics of current interest in telecommunications systems, to be

determined by the instructor. **PREREQUISITES:** A background in telecommunications systems and permission of the instructor.

**CM4502 TELECOMMUNICATION NETWORKS (4-0).**

This course covers telecommunications network design, development, and management topics, including service requirements determination, signaling, interoperability, switching, synchronization protocols, demand, and architecture. A variety of applications will be presented. **PREREQUISITE:** IS 3502.

**CM4925 TELECOMMUNICATIONS SYSTEMS, INDUSTRY, AND REGULATION (4-0).**

Study of the telecommunications industry (domestic and international) and its regulation by Congress, Executive Branch, Federal Communications Commission, and International Telecommunications Union. Consideration of special issues, including allocation of the spectrum, telecommunication service pricing, and DOD lease decisions. **PREREQUISITES:** CM 3002 and OS 3005.

**INFORMATION SYSTEMS COURSES**

**IS0001 SEMINAR FOR COMPUTER SYSTEMS MANAGEMENT STUDENTS (NO CREDIT) (0-2).**

Guest lectures. Thesis and research presentations.

**IS0123 COMPUTER SKILLS DEVELOPMENT (NO CREDIT) (0-2).**

An introduction to the use and operation of microcomputers with emphasis on applications in the administrative sciences. Exposure to pertinent software packages. Graded on a Pass/Fail basis only.

**IS0810 THESIS RESEARCH FOR COMPUTER SYSTEMS MANAGEMENT STUDENTS (0-0).**

Every student conducting thesis research will enroll in this course.

Upper Division Courses

**IS2000 INTRODUCTION TO COMPUTER MANAGEMENT (3-0).**

This course will provide an introduction to the field of automatic data processing and the functions and responsibilities of the computer manager. Specific topics include a survey of contemporary computer applications, hardware and software, and introductions to personnel management, financial management, quantitative methods, and computer science in the computer management function.

**IS2100 INFORMATION SYSTEMS LABORATORY (0-2).**

The objective is to develop computer literacy early in the Computer Systems Management student's program and to reinforce material in IS 2000. Students will perform elementary laboratory assignments involving use of micro-computer systems and digital logic; hardware architecture; machine, assembly, and high-order language programming, and application packages such as database management and word processing. **PREREQUISITE:** IS 2000.

Upper Division or Graduate Courses

**IS3000 DISTRIBUTED COMPUTER SYSTEM (4-0).**

This course covers the technology, application and management of distributed computer systems. Specific topics include distributed processing, distributed data base management, communication facilities and protocols, economic and performance analysis, and managerial and organizational problems. **PREREQUISITES:** CS 2810, CS 3010, or CS 3400, and IS 3170 (may be taken concurrently).

**IS3100 SURVEY OF CONTEMPORARY COMPUTER SYSTEMS (3-0).**

Study and analysis of contemporary large, mini, and micro computer systems, including

hardware, applications of software, operating systems and price characteristics. Emphasis is on the study and comparison of specific vendor's systems which are available in the market and evaluation of their applicability to various military requirements. Trends in computer technology and pricing structures. PREREQUISITES: CS 2810, CS 3010, or CS 3400, CS 3030 or CS 3112, and IS 3170.

**IS3170 ECONOMIC EVALUATION OF INFORMATION SYSTEMS (4-0).**

The basic principles of microeconomics applied to information systems. Microeconomic topics include demand, cost, production theory, competition, monopoly, interest rates and present values. Information systems topics include capacity planning, capital budgeting, pricing for computer services, and a study of the information industries (computers and software). PREREQUISITE: MN 2155 (may be taken concurrently).

**IS3183 MANAGEMENT INFORMATION SYSTEMS (4-0).**

Study of what an information system is, how the computer and other resources fit into the system, and management considerations involved in computer-based information systems. Issues will be discussed from the perspective of the user of information systems, and not that of the MIS specialist. PREREQUISITES: MN3105 and a basic computer course.

**IS3220 COMPUTER CENTER MANAGEMENT (3-2).**

Theory and practice of the management of computer center operations. Specific topics include facilities planning, production scheduling and control, operational procedures, and computer performance evaluation. PREREQUISITES: CS 3030 and OS 3004.

**IS3502 COMPUTER NETWORKS: WIDE AREA/LOCAL AREA (4-0).**

Analysis, evaluation, management and development of wide area and local area computer networks and supporting packet switching computer communication systems. Specific topics include network architectures, protocols, functions, standards, error detection/correction, cost reduction, interconnection, management, and security. Example systems include Defense Data Network, System Network Architecture, DECNET, Ethernet, token ring, broad band, fiber optics, private automatic branch exchanges, and satellite communications systems. PREREQUISITES: CS 2810, CS 3010, and OS 3004.

**IS3503 MICRO-COMPUTER NETWORKS (3-2).**

This course covers the theory, application, and operation of microcomputer networks. Students learn, evaluate, compare, and operate several contemporary microcomputer networks, such as IBM PC Net, IBM Token-Ring, Apple Computer Apple-Talk, 3 Comm Ethernet, mainframe emulations, and LAN internets. Student reports on comparative evaluations of contemporary microcomputer networks will be required. The IEEE Local Area Network Standards will be covered. PREREQUISITES: IS 3502 (concurrently).

Graduate Courses

**IS4182 INFORMATION SYSTEMS MANAGEMENT (4-0).**

Management of ADP in the Federal government, especially in the Department of Defense. Specific topics include identification of problems managing information systems, the identification of appropriate analytical methods to reduce risk, minimize negative impacts or to solve those problems. It is the capstone CSM course that draws

from previous courses and studies the development of practical, workable solutions to IRM problems. PREREQUISITE: IS4200 concurrently).

#### **IS4183 APPLICATIONS OF DATABASE MANAGEMENT SYSTEMS (4-0).**

Applications-oriented introduction to database management systems technology. Survey of current database systems and approaches to database technology. Technical and administrative considerations involved in a database implementation project are considered. Students will be expected to implement an applications systems using a database management package. PREREQUISITES: CS 3010, CS 3020, and IS 2000.

#### **IS4184 INFORMATION RESOURCE MANAGEMENT IN DON/DOD (4-0).**

This course is concerned with understanding the major aspects of information resource management (IRM) and how it is conducted in DOD and DON. Special attention will be paid to database administration with emphasis on how to implement security, concurrency, failure recovery, and performance monitoring/tuning in a relational database management environment like ORACLE or INGRES. Examples of IRM and DBA practice with relevant expertise from the Navy, DOD, and private sector.

#### **IS4185 DECISION SUPPORT SYSTEMS (4-0).**

The application and design of computer-based information systems to support decision making for management planning, control, and operations. Survey of current decision support systems and approaches to DSS technology, including artificial intelligence and expert systems. Students will be expected to implement an application system using available DSS tools. PREREQUISITES: MN2155, MN3105, OS3101, and IS2000 or equivalent.

#### **IS4200 SYSTEM ANALYSIS AND DESIGN (4-0).**

This course covers computer-based system development, including the following concepts, methodologies, tools, and techniques for: information systems requirements analysis, technical and economic feasibility studies, systems costing and data communications hardware and software trade-off evaluations and specifications, conversion, and testing. PREREQUISITES: CS 2810, CS 3010, and CS 3020 or CS 2810, CS 3111, and CS 3400.

#### **IS4300 SOFTWARE ENGINEERING AND MANAGEMENT (4-0).**

The objective of this course is to educate the student in areas of great concern to the Department of Defense in the fields of software engineering and management. The course examines both the technological tools of software production as well as the software engineering techniques for software project management. Software testing, metrics and reliability are also covered. PREREQUISITES: CS 3030, IS 3170, and OS 3004.

#### **IS 4320 DATABASE AND INFORMATION RESOURCE MANAGEMENT FOR C3 (4-0)**

##### **1. Catalog Description**

Applications-oriented introduction to database management systems technology with emphasis on C3 applications. Survey of current database systems and developments in database technology. Introduction to the concepts of information resource management and how information policy is implemented in the Navy. Specific topics include the relational data model, use of the SQL data manipulation language, aspects of database administration, and the role of database technology in information resource management. Students will be expected to implement a prototype application using a commercial relational database management system.

## ADMINISTRATIVE SCIENCES

---

### **IS4925 SEMINAR IN INFORMATION SYSTEMS (V-0).**

Study of a variety of topics of current interest in information systems, to be determined by the instructor. **PREREQUISITES:** A background of information systems and permission of the instructor.

### **MANAGEMENT COURSES**

#### **MN0001 SEMINAR FOR ADMINISTRATIVE SCIENCE STUDENTS. (NO CREDIT) (0-2).**

Guests lectures. Thesis and research presentations.

#### **MN0810 THESIS RESEARCH FOR ADMINISTRATIVE SCIENCE STUDENTS (0-0).**

Every student conducting thesis research will enroll in this course.

#### **Upper Division Courses**

#### **MN2031 ECONOMIC DECISION MAKING (4-0).**

The macro-economic section focuses on methods of national income determination, the consumption function, the multiplier, and the impact of fiscal and monetary policies. The microeconomic section analyzes individual economic decisions and their relation to attainment of market equilibria. **PREREQUISITE:** MA 2300 (concurrently).

#### **MN2111 SEMINAR IN MANPOWER, PERSONNEL, AND TRAINING ISSUES I (0-2).**

A introduction to the institutional and issue focus of the military MPT system. Graded on a Pass/Fail basis only.

#### **MN2112 SEMINAR IN MANPOWER, PERSONNEL, AND TRAINING ISSUES II (0-2).**

Exposure to elementary analysis of problems and issues in the contemporary military MPT system. Graded on Pass/Fail basis only.

#### **MN2113 SEMINAR IN MANPOWER, PERSONNEL AND TRAINING ISSUES III (0-2).**

Presentation and discussion of contemporary issues and problems associated with components of the MPT arena. Graded on a Pass/Fail basis only.

#### **MN2150 FINANCIAL ACCOUNTING (4-0).**

Study of basic accounting concepts and standards. Specific topics include the accounting cycle, asset valuation, equities and capital structure, earnings measurement, cash flow analysis, and financial statement analysis. (

#### **MN2155 ACCOUNTING FOR MANAGEMENT (4-0).**

Brief introduction to financial accounting, with emphasis on the content and analysis of financial statements. Specific topics in management accounting include fundamentals of cost accounting, cost-volume-profit analysis, budgeting, relevant costs for decision making, capital budgeting, and financial performance measures. (Closed to students in Administrative Science curricula.)

#### **MN2302 SEMINAR FOR ACQUISITION AND CONTRACTING STUDENTS (0-3).**

Guests lectures. Thesis and research presentations. Preparation for Certified Professional Contracts Management certificate examinations. Graded on a Pass/Fail basis only.

#### **Upper Division or Graduate Courses**

#### **MN3105 ORGANIZATION AND MANAGEMENT (4-0).**

Study of the elements of management in organizations facing a dynamic environment. Emphasis is on managerial decision making, leadership, planning and control, organizational structure and planned organizational change, and their systemic impacts on organizational effectiveness and adaptation.

**MN3111 PERSONNEL MANAGEMENT PROCESSES (4-0).**

broad coverage of human behavior in the work situation, with special emphasis on the problem of work in the Naval environment. Topical areas covered include selection, placement, training, and evaluation of personnel; motivation, remuneration, morale, supervision, and working conditions in organizations; equipment design and man-machine relationships, and consumer (user) behavior and the impact of technological programs. PREREQUISITES: MN 3105 and OS 3106 (concurrently).

**MN3123 MILITARY SOCIOLOGY (4-0).**

An exploration of classical theories of sociology pertaining to civilian-military relations with modern applications to command and control problems. Sexism, racism, family dissolution, unionization, bureaucratic inertia, career patterns, and professionalism are considered from the perspective of sociology. PREREQUISITE: MN 3105.

**MN3140 MICROECONOMIC THEORY (4-0).**

Determination of the allocation of resources and the distribution of output. Consumer and producer choice theory. Partial equilibrium analysis. Welfare economics. Applications to defense problems are emphasized. PREREQUISITES: MA 2300 and MN 2031.

**MN3161 MANAGERIAL ACCOUNTING (4-0).**

Introduction to cost determination systems, including job order systems, overhead costing, variable and absorption costing, and standard costs. Emphasis is on applications of financial data to planning, control, and decision making. Topics covered include budgeting, flexible budgets, variance analysis, performance measures, cost-volume-profit analysis, cost analysis for decision making, and capital budgeting. PREREQUISITE: MN 2150.

**MN3172 PUBLIC POLICY PROCESSES (4-0).**

A presentation of means by which resources are allocated to the production of goods in the defense sector. The Defense Planning, Programming and Budgeting System is studied. Presidential policy making and management and Congressional budget action are considered, with emphasis on national defense concerns. PREREQUISITE; MN 2031.

**MN3301 SYSTEMS ACQUISITION AND PROJECT MANAGEMENT (4-0).**

This course provides the student with an understanding of the underlying philosophies and concepts of the systems acquisition process and the practical application of project management methods within this process. Topics include the evolution and current state of systems acquisition management; the defense systems acquisition cycle; user-producer acquisition management disciplines and activities; and project planning, organization, staffing, directing, and controlling.

**MN3303 PRINCIPLES OF ACQUISITION AND CONTRACTING (4-0).**

Introduction to the principles of acquisition and contraction. This course presents the fundamentals of the Federal Acquisition Regulation and the DOD Supplement; the acquisition and contracting processes, including requirements determination, acquisition strategies, basic contract law, ethics, contract types, contracting methods, and acquisition/contract management techniques.

**MN3304 CONTRACT PRICING AND NEGOTIATIONS (4-0).**

This course involves the study of pricing theory and strategies, cost methods, cost and price analysis, cost principles, Cost Accounting Standards, and contract negotiations. Students develop and sharpen negotiating skills by participating in practical negotiation exercises. PREREQUISITES: MN 3140, MN 3303, and OS 3105.

**MN3305 CONTRACT ADMINISTRATION (4-0).**

This course stresses the management skills and techniques necessary for the successful administration of government prime contracts and subcontracts. Topics include managing contract progress and performance, change control, quality control, cost/financial control, property, terminations, and regulatory and policy concerns. **PREREQUISITE:** MN 3304

**MN3307 ADP ACQUISITION (4-0).**

Introduction to the management principles, concepts, and issues involved in Federal government acquisition of ADP requirements. The course focuses on the concepts of system acquisition and project management, as they pertain to ADP acquisition and specific purchases of computer hardware and software. **PREREQUISITE:** Enrollment in Computer Systems Management curriculum or permission of the instructor.

**MN3333 MANAGERIAL COMMUNICATION SKILLS (4-0).**

This course provides students with the writing, speaking, listening, and communication problem-solving skills required of them to be effective managers. Instruction concentrates on writing clear, concise documents, giving effective briefings and presentations, developing strong listening skills, conducting meetings that get results, managing the communication skills of subordinates, and integrating new communication technologies with existing ones. **PREREQUISITE:** Enrollment in an Administrative Sciences Curriculum or permission of the instructor.

**MN3371 CONTRACTS MANAGEMENT AND ADMINISTRATION (4-0).**

Study of the characteristics and phases of the contracting process. Coverage includes planning, execution, and control of the con-

tracting process; techniques used in purchasing goods and services of varying complexities; and the relationship of contracting to the acquisition process.

**MN3372 MATERIAL LOGISTICS (4-0).**

An overview of logistics, including forecasting, inventory management, warehousing, transportation, facilities location, material handling, and logistics planning and control processes. A variety of quantitative model and related solution procedures which support logistics decision making are introduced. **PREREQUISITES:** Calculus (MA 2300 or equivalent). Probability and statistics (OS 3105 and OS 3106 (concurrently, or equivalent).

**MN3373 TRANSPORTATION MANAGEMENT I (4-0).**

Analysis of transportation systems from a managerial perspective. Topics include carriers and users of systems; alternative modes; intra and intermodal competitive relationships; regulatory and legal considerations; demand, cost, and pricing analysis; and managerial resource allocation problems. Application of these topics to the U.S. domestic freight transportation network. **PREREQUISITE:** MN 3140 (may be taken concurrently)

**MN3374 PRODUCTION/OPERATIONS MANAGEMENT (4-0).**

Analytical techniques which facilitate production and operations management. Topics include forecasting, facilities planning and location, manufacturing resources planning, shop floor scheduling, work measurement, quality control, project control, robotics, and flexible manufacturing. **PREREQUISITE:** OS 3006.

**MN3375 MATERIAL HANDLING SYSTEMS DESIGN (4-0).**

A study of the principles and systems concepts of materials handling and their application in the design of a materials handling system. An overview of current DOD automated materials handling systems is also provided.

**MN3377 INVENTORY MANAGEMENT (4-0).**

A study of the inventory management process of the Naval Supply Systems Command, with emphasis on the procedures for determining when and how much of a given item to order. Provisioning, wholesale and retail replenishment, and the supply budgetary process. PREREQUISITE: OS 3106 or equivalent.

**MN3650 HEALTH ECONOMICS (4-0).**

An overview and analysis of the underlying elements of the continuing problems in the military and civilian health care delivery systems. Elements covered are organizational structure and change in the mode of health care delivery; supply, demand, output, and quality measurement of health services; the impact of health care legislation; and the relationship of the military and civilian sectors. PREREQUISITE: A course in microeconomics.

**MN3760 MANPOWER ECONOMICS (4-0).**

An introduction to the theoretical aspects of labor economics. Concepts covered include the supply of labor, the demand for labor, market wage determination, internal labor markets, human capital formation and earnings functions, migration and turnover, compensating wage differentials, pay and employment discrimination, and unemployment and inflation. PREREQUISITE: MN 3140.

**MN3801 TECHNOLOGY TRANSFER (4-0).**

The study of dissemination and utilization of technology and associated problems, with emphasis on communications, sociology, and organizational factors. PREREQUISITE: MN 3105 or graduate standing in a technical curriculum and permission of the instructor.

**MN3900 READINGS IN ADMINISTRATIVE SCIENCES (1-0).**

An individualized program of readings and study in some area of the administrative sciences, designed to meet the student's special educational needs. PREREQUISITES: A background in the area of study and departmental approval. Graded on a Pass/Fail basis only.

**MN3902 MPT COMPUTER SKILLS ENHANCEMENT (0-2).**

An introduction to file handling and data analysis using a computer. Topics include an overview of the structure of a mainframe computer system, file creation, storage and transfer, and basic programming concepts used by statistical software packages. Graded on Pass/Fail basis only.

## Graduate Courses

**MN4105 MANAGEMENT POLICY (4-0).**

Study and analysis of complex managerial situations requiring comprehensive integrated decision making. Topics include operational and strategic planning, policy formulation, executive control, environmental adaptation and management of change. Case studies in both the public and private sectors are used. PREREQUISITE: Open only to students in the final quarter of an Administrative Science curriculum, Computer Systems Management, or Telecommunications Systems Management.

**MN4106 MANPOWER/ PERSONNEL POLICY ANALYSIS (4-0).**

Study and analysis of manpower/personnel policy alternatives with emphasis on identifying the trade-offs involved, the dynamic impact of major policy decisions, and the short-term and long-term consequences of decisions. Review, use, and evaluation of tools to aid in selecting policy alternatives. Study of representative cases. PREREQUISITE: Open only to students in the final quarter of the Manpower, Personnel and Training Analysis curriculum.

**MN4110 MULTIVARIATE DATA ANALYSIS I (5-2).**

The methodology of research analyses, including processes and statistical techniques used to construct and test empirical relationships in the manpower field: classical linear regression model, multiple regression when the standard assumptions are not met, qualitative choice models, discriminant analysis, principal component analysis, factor analysis, and cluster analysis. PREREQUISITE: A course in statistics.

**MN4111 MULTIVARIATE DATA ANALYSIS II (5-2).**

The methodology of research analyses, including processes and statistical techniques used to construct and test empirical relationships in the manpower field: classical linear regression model, multiple regression when the standard assumptions are not met, qualitative choice models, discriminant analysis, principal component analysis, factor analysis, and cluster analysis. PREREQUISITE: A course in statistics.

**MN4112 PERSONNEL TESTING AND SELECTION (4-0).**

Study of methods available for evaluating and predicting training and work performance in organizations like the Navy: employment interviewing, testing, life-history

data, and rating scales, with some reference to job analysis and recruitment. Special emphasis on testing concepts and models particularly in relation to the computerization of the Armed Services Vocational Aptitude Battery, equal employment opportunity, and selection decisions based on cost-benefit analysis.

**MN4117 JOB ANALYSIS AND PERSONNEL TRAINING (4-0).**

Study of job analysis and its use in determining training requirements. Consideration of instructional systems development and training pipeline management. Attention to cost-benefit issues involving training in regard to selection, equipment design, changing job requirements, and career development. PREREQUISITE: MN 3111.

**MN4119 SEMINAR IN MANPOWER ANALYSIS (Variable).**

Study of a variety of topics of current interest in manpower analysis, to be determined by the instructor. PREREQUISITES: A background in manpower analysis and permission of the instructor.

**MN4121 ORGANIZATION THEORY (4-0).**

Study of the major theories of modern organizations. This course emphasizes the analysis of organizational phenomena from multiple perspectives, using theories of individual, group, and organizational behavior. Topics include organization design and culture, political analysis of organizations, management of change, open systems theory, and contingency theories. PREREQUISITE: MN 3105.

**MN4122 PLANNING AND CONTROL: MEASUREMENT AND EVALUATION (4-0).**

Theory and techniques of the managerial functions of planning and control. Emphasis

is placed on the effects of the planning and control structure on the behavior of human components of the system. Topics include the problems associated with the utilization of surrogates for measurement purposes; the analysis of the influence of assumptions, values, and objectives on the planning and control process; budgeting and forecasting, and performance evaluation and the reward structure. PREREQUISITES: MN 3105 and MN 3161.

**MN4125 MANAGING PLANNED CHANGE IN COMPLEX ORGANIZATIONS (4-0).**

Examination of the approaches to planning and managing change efforts in complex social systems made up of the interdependent components of technology, structure, task, and people and of the role of the manager or staff specialist and the process of helping. Emphasis is placed on strategies and technologies for diagnosis and planning aimed at effective implementation. Opportunities for practice using both simulations and actual organizational cases. Focuses on problems involved in effective implementation of technologically, structurally, or human resource based planned change efforts. PREREQUISITE: MN3105.

**MN4127 SEMINAR IN ORGANIZATION BEHAVIOR (Variable).**

Study of a variety of topics of current interest in organization behavior, to be determined by the instructor. PREREQUISITES: A background in organization behavior and permission of the instructor.

**MN4145 POLICY ANALYSIS (4-0).**

The application of economic methods to non-market transactions. Analysis of large scale defense resource allocation problems. Weapon system definition. Life cycle cost models. Examples of cost-benefit and cost-effectiveness analyses. PREREQUISITES: MN 3140, MN 3161, and OS 3106.

**MN4151 INTERNAL CONTROL AND FINANCIAL AUDITING (4-0).**

Study of the objectives and techniques of internal control systems and of audits of financial reports and records. Specific topics include the internal control structure and evaluation of internal control, audit evidence, audit tests, the auditor's decision process, statistical sampling, and special controls and audit problems in computer-based systems. Audits of several transaction cycles are examined. PREREQUISITES: MN 3161, OS 3106, and a basic computer course.

**MN4152 CORPORATE FINANCIAL MANAGEMENT (4-0).**

The management of the finance function in industry, with particular attention to defense contractors. Specific topics include cash and working capital management, long-term financing, and determination of optimal capital structure. PREREQUISITE: MN 3161.

**MN4153 SEMINAR IN FINANCIAL MANAGEMENT (Variable).**

Study of a variety of topics of current interest in financial management, to be determined by the instructor. PREREQUISITES: A background in financial management and permission of the Instructor.

**MN4154 FINANCIAL MANAGEMENT IN THE ARMED FORCES (4-0).**

Review of financial management concepts and practices in DOD and the Armed Forces, with emphasis on the Department of the Navy. Includes study of PPBS, controllership, budget formulation and execution, headquarters and field activity accounting systems, and various types of funds. PREREQUISITES: MN 2155 or MN 3161 and MN 3172.

**MN4155 OPERATIONAL AUDITING (4-0).**

This course examines auditing as a tool of management control in large, complex organizations. Case studies are used to discuss the scope of the audit, audit procedures, audit findings and recommendations, auditor training and professionalism, and the roles and responsibilities of auditee-managers, users of audit reports, and auditors. The General Accounting Office's audit and internal control standards are also examined, as well as directives of the Office of Management and Budget, Department of Defense, and Department of the Navy. During the last few weeks, students do field research on an operational audit for a local organizational audit for a local organization. **PREREQUISITE:** MN 3161.

**MN4159 FINANCIAL REPORTING AND ANALYSIS (4-0).**

Advanced study of basic accounting concepts underlying published financial reports. Emphasis is placed on the measurement, communication, and evaluation processes. Topics include setting accounting policies, alternative bases of valuation, alternative concepts of earnings, and discussion of controversial accounting issues. The course takes the perspective of managers and users of financial information. **PREREQUISITE:** MN 3161.

**MN4161 FINANCIAL MANAGEMENT CONTROL SYSTEMS (4-0).**

Study of the structure and the processes of management control in government organizations. Specific topics include the basic concepts of planning and control, organization of the management control function, measurement of inputs and outputs, pricing government services, programming, budgeting, accounting, and performance evaluation. **PREREQUISITES:** MN 3105 and MN 2155 or MN 3161.

**MN4162 COST ACCOUNTING (4-0).**

Review of basic cost accounting procedures. In-depth study of cost accounting systems, allocation of direct and indirect costs to cost objectives, and special problems of accounting for materials, labor, and overhead costs. Specific attention is given to the objectives and the substance of Cost Accounting Standards for negotiated defense procurement contracts. **PREREQUISITE:** MN 3161.

**MN4163 ANALYTICAL TECHNIQUES FOR FINANCIAL CONTROL AND PLANNING (4-0).**

Study of quantitative methods most useful for financial planning and control. Emphasis is on developing quantitative methods as decision support tools, with available computer software as computational aids. Covered are introductions to the relevant quantitative techniques, the conditions for successful applications, data needed for applications, and the use of computational aids for problem solving. The goal is to provide sufficient competency for students to apply sophisticated analytical techniques to various planning and control environments in the public sector. **PREREQUISITES:** MN 3161 and OS 3106.

**MN4301 CONTRACTING FOR MAJOR SYSTEMS (4-0).**

Study of the major systems contracting process, procedures, and practices. This course focuses on the contracting process of the Naval Systems Commands and the Major Defense Acquisition Process. Major topics include contracting organizations for systems acquisition, systems acquisition process, business clearance process, source selection, multi-year procurement, pricing and administration of major contracts. Related topics include funding, reliability/maintainability, ILS, foreign military sales, research and development, test and evaluation, congressional activity. **PREREQUISITE:** MN 3305 or permission of the instructor.

**MN4302 PUBLIC EXPENDITURE POLICY AND ANALYSIS (4-0).**

Government resource decision making in the defense budgeting process. Models of budget and policy decision making. Analysis of contemporary defense policy issues and their resource implications. Historical evolution of defense organizations and relationship to Congress and the Executive. **PREREQUISITE:** MN 4145.

**MN4310 LOGISTICS ENGINEERING (4-0).**

The concept of integrated logistics support and its relationships with systems engineering. Operational requirements, system maintenance concept, functional analysis, life cycle costs, logistics support analysis, systems design, test and evaluation, and production, provisioning and resupply of repair and spare parts. **PREREQUISITE:** OS 3006 (concurrently).

**MN4371 ACQUISITION AND CONTRACTING POLICY (4-0).**

A seminar using case studies and current acquisition issues to analyze government and business acquisition/contracting policies. Emphasis is on acquisition/contracting decision making and policy formulation. **PREREQUISITES:** MN 4301 and MN 3301 and MN 3371 and permission of the instructor.

**MN4372 SEMINAR IN ACQUISITION AND CONTRACT MANAGEMENT (Variable).**

Study of a variety of topics of current interest in acquisition and contracting, to be determined by the instructor. **PREREQUISITES:** A background in acquisition and permission of the instructor.

**MN4373 TRANSPORTATION MANAGEMENT II (4-0).**

A continuation of MN 3373. Concentration on the management of large-scale transportation networks, emphasizing international transportation and the role of the U.S. mer-

chant marine. Also covered are the DOD transportation agencies, DOD transportation planning models, and current research in commercial and military transportation. **PREREQUISITES:** MN 3373 or permission of instructor and SECRET NOFORN clearance.

**MN4376 SEMINAR IN MATERIAL LOGISTICS (4-0).**

Study of a variety of topics of current interest in logistics, to be determined by the instructor. **PREREQUISITES:** A background in logistics and permission of the instructor.

**MN4500 PRODUCTIVITY ANALYSIS (4-0).**

Study of the theoretical and institutional foundations of the analysis of productivity measurement and enhancement programs in DOD. Emphasis is placed on methods of applying microeconomic and organizational effectiveness principles and concepts to the critical analysis of proposed and existing DOD productivity programs, as well as to the development of alternatives which have higher probabilities of effecting the desired increases in program effectiveness and efficiency. **PREREQUISITES:** MN 3105 and MN 3140.

**MN4650 THE MILITARY HEALTH CARE DELIVERY SYSTEM AND ANALYSIS (4-0).**

This course is designed to acquaint the student with the structure and operation of the Department of Defense's system for providing health care to those eligible under current regulations; to identify current problem areas; and, through application of systems analysis and management techniques, to address the possible solutions to these problems in a course project. **PREREQUISITE:** MN 3650.

**MN4651 HOSPITAL ECONOMICS AND SYSTEMS ANALYSIS (4-0).**

This course deals analytically and empirically with the major organizational and economic structures and problems associated with the operation of a health care delivery facility or group of facilities (hospital or integrated group of clinics). The roles of institutional incentives, methods of reimbursement, provider organization and payment, and exogenous factors such as general inflation and legislative parameters are discussed. The objective is a working knowledge of these major elements in the health care production process and probable systemic change. PREREQUISITE: MN 3650.

**MN4652 MICRO HEALTH SYSTEMS ANALYSIS (4-0).**

The purpose of this course is to analyze in depth, using analysis of extant institutional constructs, the potential for deriving policy recommendations and designing research to motivate more efficient provision of health care by individual facilities. The emphasis is on identifying gaps in incentives and organizational structures which lead to suboptimal facility behavior in the cost containment and quality areas. PREREQUISITES: MN 4650 and MN 4651.

**MN4761 APPLIED MANPOWER ANALYSIS (4-0).**

A continuation and application of theoretical models developed in MN 3760. Recent applications of economic analysis to military manpower, personnel, and training problems are studied. Typical topics include supply models, turnover and retention models, alternative retirement systems, civilian earnings effects of military employment, alternative compensation systems, career mix, and billet cost estimation. PREREQUISITE: MN 3760.

**MN4900 READINGS IN ADMINISTRATIVE SCIENCE (Variable).**

An individualized program of advanced readings and study in some area of administrative science. PREREQUISITES: A background of advanced work in the area of study and departmental approval. Graded on a Pass/Fail basis only.

**MN4904 MPT RESEARCH APPLICATIONS (0-2).**

Applications of research skills to manpower problems. PREREQUISITE: MN 4106. Graded on a Pass/Fail basis only.

**MN4942 THE STRUCTURE, CONDUCT AND PERFORMANCE OF THE DEFENSE INDUSTRIES (4-0).**

A study of selected defense industries' structures (e.g., seller concentration, product differentiation, barriers to entry, demand for products, and buyer concentration), conduct (e.g., pricing policy, product characteristics policy, and policies toward rivals and customers), and performance (e.g., efficiency, progress, and employment). The government as consumer and regulator. Typical industries studied are aerospace, computers, shipbuilding, and telecommunications. PREREQUISITE: MN 3140 or equivalent.

**MN4945 SEMINAR IN ECONOMICS (Variable).**

Study of a variety of topics of current interest in economics, to be determined by the instructor.

**MN4970 SEMINAR IN ADMINISTRATIVE SCIENCE (Variable).**

Study of a variety of topics of general interest in the administrative sciences, to be determined by the instructor. PREREQUISITES: A background in administrative sciences and permission of the instructor.

## DEPARTMENT OF AERONAUTICS AND ASTRONAUTICS

**Edward Roberts Wood**, Chairman and Professor of Aeronautics and Astronautics (1988)\*; D. Eng, Yale University, 1967.

**Robert Edwin Ball**, Professor of Aeronautics and Astronautics (1967); PhD, Northwestern University, 1962.

**Richard William Bell**, Professor of Aeronautics and Astronautics (1951); PhD, California Institute of Technology, 1958.

**Oscar Biblarz**, Associate Professor of Aeronautics and Astronautics (1968); PhD, Stanford University, 1968.

**M.S. Chandrasekhara**, Adjunct Professor and Assistant Director, Navy-NASA Joint Institute of Aeronautics (1987); PhD, University of Iowa, (1983).

**Daniel Joseph Collins**, Professor of Aeronautics and Astronautics (1967); PhD, California Institute of Technology, 1961.

**Michael R. Gorman**, Associate Professor of Aeronautics and Astronautics (1988); PhD, University of Pittsburgh, 1981.

**James Pryor Hauser**, Associate Professor of Aeronautics and Astronautics (1988); PhD, University of Colorado, 1974.

**James Valentine Healey**, Associate Professor of Aeronautics and Astronautics (1983); PhD, University of Southern California, 1969.

**Sheshagiri K. Hebbar**, Adjunct Professor of Aeronautics and Astronautics (1988), PhD, University of Maryland, 1976.

**Richard Moore Howard**, Assistant Professor of Aeronautics and Astronautics (1987); PhD, Texas A&M University, 1987.

**Ramesh Kolar**, Assistant Professor of Aeronautics and Astronautics (1985); PhD, University of Arizona, 1984.

**Gerald H. Lindsey**, Professor of Aeronautics and Astronautics (1965); PhD, California Institute of Technology, 1966.

**James Avery Miller**, Associate Professor of Aeronautics and Astronautics (1963); PhD, Illinois Institute of Technology, 1963.

**David Willis Netzer**, Professor of Aeronautics and Astronautics (1968); PhD, Purdue University, 1968.

**Eric Larue Pagenkopf**, Instructor of Aeronautics and Astronautics (1988), MS, Naval Postgraduate School, 1988.

**Max Franz Platzer**, Professor of Aeronautics and Astronautics (1970); Dr. Tech. Science, Technical University of Vienna, Austria, 1964.

**Louis Vincent Schmidt**, Professor of Aeronautics and Astronautics (1964); PhD, California Institute of Technology, 1963.

**Raymond Parmous Shreeve**, Professor of Aeronautics and Astronautics (1971); PhD, University of Washington, 1970.

**Richard D. Wood**, Adjunct Professor of Aeronautics and Astronautics (1985); PhD, Columbia-Pacific University, 1981.

**Edward Ming-Chi Wu**, Professor of Aeronautics and Astronautics (1984); PhD, University of Illinois, 1965.

*\*The year of joining the Postgraduate School Faculty is indicated in parentheses.*

**Chairman:**

E. Roberts Wood, Professor,  
Code 67, Halligan Hall, Room 139,  
(408) 646-2311, AV 878-2311.

The Department of Aeronautics and Astronautics provides advanced professional knowledge in the field of Aeronautical and Astronautical Engineering to supply Navy technical managers with a broadly based education. Basic and advanced graduate courses are offered in fluid mechanics, structures, guidance and control, flight mechanics and propulsion, with application to rotary and fixed-wing aircraft, missiles, and spacecraft.

Students specialize in either Aeronautical Engineering (Curriculum 610) or Aeronautical Engineering/Avionics (Curriculum 611). The Degree of Master of Science in Aeronautical Engineering is offered in both Curricula. Advanced degrees at the Master's level are also offered to students in Weapons Systems Engineering (Curriculum 530) or in Space Systems Engineering (Curriculum 591). Selected students may be eligible to pursue the degree of Aeronautical Engineer or Doctor of Philosophy.

The Department of Aeronautics and Astronautics received a renewal of its full six (6) year accreditation from the Accreditation Board for Engineering and Technology in 1984.

## **REQUIREMENTS FOR STUDY OF AERONAUTICAL AND ASTRONAUTICAL ENGINEERING**

The entrance requirement for study in the Department of Aeronautics and Astronautics generally is a baccalaureate in engineering earned with above average academic performance. This requirement can sometimes be waived for students who have shown distinctly superior ability in backgrounds other than engineering but who have had adequate coverage in the basic physical and mathematical sciences. All entrants must obtain the approval of the Chairman, Department of Aeronautics and Astronautics.

Students who have not majored in Aeronautics, or who have experienced a significant lapse in continuity with previous academic work, initially will take preparatory courses in aeronautical engineering and mathematics at the upper division level, extending through the first three academic quarters and constituting a portion of the course-work for degrees in Aeronautics. Final approval of programs leading to degrees in Aeronautical Engineering must be obtained from the Chairman, Department of Aeronautics and Astronautics.

Degree coverage specifically to be approved includes: adequate laboratory work, partial differential equations at the graduate level, and at least one capstone design course.

## **MASTER OF SCIENCE IN AERONAUTICAL ENGINEERING**

Upon completing the preparatory courses, students may be selected on the basis of academic performance for the degree program leading to the Master of Science in Aeronautical Engineering. However, students who have recently earned a degree with major in Aeronautics may apply for admission directly to the graduate program.

The Master of Science degree requires a minimum of 36 credit hours of graduate courses, of which at least 12 credit hours shall be at the 4000 level. It also requires that not less than 32 credit hours shall be in the disciplines of engineering, physical science or mathematics, and that this shall include a minimum of 20 hours of courses in the Department of Aeronautics and Astronautics and a minimum of 8 hours in other departments.

An acceptable thesis is required for the degree unless waived by the Chairman, Department of Aeronautics and Astronautics, in which case 10 quarter hours of 4000 level courses in the disciplines of engineering, physical science, or mathematics will be required in addition to those specified above, increasing the total requirements to 46 quarter hours of graduate level credits.

## **MASTER OF SCIENCE IN ENGINEERING SCIENCE**

Students of the Weapons Systems Engineering Curriculum (530) can elect Aeronautics as specialization option and receive the degree Master of Science in Engineering Science. The program must include at least 36 credit hours of graduate work in engineering, science and mathematics, at least 12 of which must be at the 4000 level. Of these 36 hours at least 20, including work at the 4000 level, must be in the Department of Aeronautics and Astronautics. Cognizance over the specialization course sequences, thesis research areas and the degree resides with the Chairman of the Department of Aeronautics and Astronautics.

The program must contain at least 12 hours at the graduate level in courses other than those presented in the Department of Aeronautics and Astronautics.

The candidate must present an acceptable thesis on a topic given prior approval by the Department of Aeronautics and Astronautics. Final approval of the program leading to the Master of Science in Engineering Science with specialization in Aeronautics shall be obtained from the Chairman of the Department of Aeronautics and Astronautics.

## **GRADUATE DEGREE IN CURRICULUM 591**

Students of the Space Systems Engineering Curriculum (591) can elect specialization in Astronautics and receive the Master's degree. This degree requires, in addition to courses specific to Curriculum 591, at least 20 credit hours of advanced coursework taken in the Department of Aeronautics and Astronautics. A minimum of 36 graduate credits, including at least 12 at the 4000 level, and an acceptable thesis, are necessary. Not less than 32 graduate credits shall be in the disciplines of engineering, physical science or math-

ematics. Final approval of programs leading to this degree must be obtained from the Chairman of the Department of Aeronautics and Astronautics.

## **AERONAUTICAL ENGINEER**

Upon completing the equivalent of two quarters of a graduate program, students may be selected on the basis of academic performance for the program leading to the degree Aeronautical Engineer. Selection to this degree program shall be limited to those students who, in the opinion of the faculty, have the potential to conduct the required research. The degree Aeronautical Engineer requires a minimum of 72 credit hours of graduate courses, of at the 4000 level. It also requires that not less than 64 credit hours shall be in the disciplines of engineering, physical science, or mathematics, and that this shall include a minimum of 36 hours of courses in the Department of Aeronautics and a minimum of 12 hours in other departments. An acceptable thesis is required for the degree.

Students admitted to work for the degree Aeronautical Engineer may be satisfying requirements for the Master of Science degree concurrently. The Master of Science in Aeronautical Engineering may be conferred at the time of completion of the requirements for that degree.

## **DOCTOR OF PHILOSOPHY AND DOCTOR OF ENGINEERING**

The Department of Aeronautics and Astronautics offers the program leading to the doctorate in the fields of gas dynamics, flight structures, flight dynamics, propulsion, aerospace physics, and aerospace vehicle design.

Entrance into the doctoral program may be requested by officers currently enrolled who have sufficiently high standing. A departmental screening examination will be administered to those so requesting. The Department of

### AERONAUTICAL LABORATORIES

Aeronautics and Astronautics also accepts officer students selected in the Navy-wide Doctoral Study Program, and civilian students selected from employees of the United States Federal Government.

All applicants who are not already enrolled as students in the Department of Aeronautics and Astronautics shall submit transcripts of their previous academic and professional records and letters of recommendation to the Department Chairman. The Chairman, with the advice of other department members, shall decide whether or not to admit the applicant to the Doctoral Program.

Every applicant who is accepted for the Doctoral Program will initially be enrolled in the AeE Program under a special option which satisfies the broad departmental requirements for the Engineer's degree and which includes research work. As soon as feasible, the student must find a faculty advisor to supervise his research and help him initially in the formulation of his plans for advanced study. As early as practicable thereafter, a doctoral committee shall be appointed to oversee that student's individual doctoral program as provided in the school-wide requirements for the Doctor's degree.

A noteworthy feature of the program leading to the Doctor of Engineering degree is that the student's research may be conducted away from the Naval Postgraduate School in a cooperating laboratory or other installation of the Federal Government. The degree requirements are outlined in general school requirements for the Doctor's degree.

In the event that a student is unable finally to satisfy the above requirements for the doctorate for any reason but has in the course of his doctoral studies actually completed all of the requirements for the degree of Aeronautical Engineer, he shall be awarded the latter degree.

Eight major laboratory divisions support instructional and research programs in subsonic aerodynamics, gas dynamics, rocket and ramjet propulsion, turbomachinery, computer-aided engineering, flight mechanics, structures and composite materials.

The subsonic aerodynamics laboratory consists of two low-speed wind tunnels and a large continuous flow visualization tunnel, and a 15x20 inch water tunnel. Standard wind tunnel techniques are used in the 32x45 inch and 42x60 inch tunnels and helium bubble filaments are used in the 5x5x12 foot test section of the three-dimensional flow visualization tunnel.

The gas dynamics laboratory includes a 4 x 4 inch blowdown supersonic wind tunnel, a cold driven, three-inch double-diaphragm shock tube, a 2 x 2 x 18 foot open-circuit oscillating flow tunnel and a vertically mounted, supersonic free-jet. Laser interferometers, schlieren systems, hot wire anemometry and laser-doppler anemometers are used. Ruby, He-Ne, Argon and CO lasers are available. Extensive use is made of laser holography. An electrohydrodynamic research facility permits studies of electric power generation, turbulence and fuel sprays into gas turbine combustors.

The combustion laboratory consists of an instrumented control room, a propellant evaluation laboratory, a high pressure air facility and three test cells equipped with diagnostic apparatus and motor hardware for investigating solid, liquid, gaseous and hybrid rocket, solid fuel ramjet and gas turbine combustion. Vitiated air heaters are used to generate temperatures to 1300 °R. Several CW and one pulsed laser with holocamera, high speed motion picture cameras, light scattering and transmission measurement systems, schlieren systems, sampling probes

and a dark room equipped for holographic reconstruction and data retrieval are utilized.

The Turbo-Propulsion Laboratory (TPL) houses a unique collection of experimental facilities for research and development related to compressors, turbines and advanced air-breathing propulsion engine concepts. In a complex of specially designed concrete structures, one building, powered by a 750 HP compressor, contains 10 x 60 inch rectilinear and 4 to 8 foot diameter radial cascade wind tunnels and a large 3-stage axial research compressor for low speed studies. A two-component, automated traverse, LDV system is available for CFD code verification experiments. A second building, powered by a 1250 HP compressed air plant, contains fully instrumented transonic turbine and compressor rigs in explosion proof test cells. A spin-pit for structural testing of rotors to 50,000 RPM and 1800°F is provided. Model experiments and equipment for instrumentation development are located in a separate laboratory. Data acquisition from 400 channels of steady state and 16 channels of non-steady state measurements at up to 100kHz is controlled by the laboratory's HP 1000 series computer system. On-line reduction and presentation of data with time sharing terminals are available to multiple users. Terminals for HP 9845 and the central IBM 307-3033 computers are available for data analysis or flow computation.

The Computer Aided Design — Computer Aided Engineering (CAD/CAE) laboratory is a joint Department of Mechanical Engineering — Department of Aeronautics project. This laboratory, which is now under development, will have twelve 32-bit networked CAD/CAE workstations, twenty-four microcomputer systems and two computer-controlled data acquisition systems.

The flight mechanics laboratory, also under development, will consist of a fixed-base, six-degree-of-freedom flight

simulator for ground based studies. A remotely controlled helicopter model is used in rotary-wing studies.

The structural test laboratory contains testing machines for static and dynamic tests of materials and structures and an electrohydraulic closed-loop machine for fatigue testing. Aircraft components as large as an actual aircraft wing are accommodated on a special loading floor where static and vibration tests are conducted. An adjacent strain gage and photo-elastic facility provides support to test programs and instruction in structural testing techniques.

The Mechanics of Materials for Composites laboratory is equipped with fabrication and testing facilities for characterizing the mechanical behavior of fiber-reinforced composites. The fabrication facilities include an oven and press with provisions for computer control of temperature and pressure profile for fabrication of laminates and strands. The testing facilities include five mechanically driven universal testing machines for general testing and for life testing. These testing facilities are supported by a wide array of modern data acquisition instruments including computer controlled data loggers, digital voltmeters, acoustic emission analyzer and laser diffraction instruments. Personal computers and a VAX-725 provide ample capacity for analytical interpretation of data and for model formulation.

The Dynamics and Nondestructive Evaluation Laboratory is equipped for research on vibration of structures, particularly lightweight components for space structures made from composite materials like graphite/epoxy. It contains shaker tables, a four channel FFT analyzer, microcomputers with modal analysis software, and associated accelerometer instrumentation. For the study of wave propagation in these structures, the laboratory has high speed transient recorders, narrow and wideband transducers,

pulse generators, and an arbitrary waveform generator. Static and fatigue loading of samples can be carried out on the 100 kip servo hydraulic MTS machine. The detection of flaw growth during a test can be accomplished using the acoustic emission analyzer. A 2' x 4' ultrasonic C-scan tank can be used for post-test imaging of internal damage. Phase locked loop and quadrature phase detector circuitry allow precise spatial location of flaws. This instrumentation can also be used for very accurate wavespeed measurements.

### **NAVY-NASA JOINT INSTITUTE OF AERONAUTICS**

Through a Memorandum of Understanding with the Ames Research Center (ARC) of the National Aeronautics and Space Administration (NASA), a Joint Institute of Aeronautics was established in July 1986. The purpose of the Institute is to provide NPS students with opportunities to perform their thesis research in an ARC Laboratory, to involve NPS faculty and students in NASA scientific and engineering projects, to develop special courses and seminars for NPS and ARC scientists and engineers to refresh and strengthen professional knowledge at NPS and ARC, and to encourage the enrollment of federal employees for graduate study at NPS with the possibility of performing the thesis research at ARC. Information about research opportunities and admission procedures can be obtained from the Institute Director, Dr. M.F. Platzter, or the Assistant Director, Dr. M.S. Chandrasekhara.

### **SPACE SYSTEMS LABORATORIES**

Laboratories which support the Space Systems Programs are located in several departments including Physics, Oceanography, and Electric

cal and Computer Engineering. Refer to the appropriate part of the catalog for descriptions. Aeronautics has developed a Solar Simulator laboratory which features a 2500W source. Experiments are computer controlled using IBM/PC with ISAAC 2000 controller. Solar cells can be tested for radiation damage using the LINAC or Pulserod sources which are located in Physics. The Laser Damage Facility is a Joint Physics/Aeronautics laboratory developed to support instruction and research related to such topics as satellite vulnerability. The Laser Damage Facility features a pulsed CO electrical laser with sufficient irradiance to generate laser supported detonation waves. An optics laboratory is also available which utilizes lasers for such space functions as remote sensing in addition to precision optical measurements.

### **DEPARTMENTAL COURSE OFFERINGS AERONAUTICS**

#### **AE0020 AERONAUTICAL ENGINEERING PROGRAM PLANNING (0-1).**

Oral presentations to students by the Aeronautics Academic Associate and faculty members involved in research covering program planning, thesis requirements and research specialty areas.

#### **AE0810 THESIS RESEARCH (0-0).**

Every student conducting thesis research will enroll in this course.

#### **Upper Division Courses**

#### **AE2015 ENGINEERING DYNAMICS (3-2).**

Kinematics and dynamics of particles, systems of particles, systems of particles and rigid bodies in two dimensions; concepts of work, kinetic energy, potential energy, impulse and momentum. **PREREQUISITE:** MA 2121 and ME 2501.

**AE2021 INTRODUCTION TO FLIGHT STRUCTURES (4-1).**

Introduction to concepts of stress and strain, and mechanical behavior of materials. Bending and torsional stress and deflection analysis of representative aero-structural components, including statically indeterminate cases. Introduction to stability analysis, and energy methods.

**AE2035 BASIC AERODYNAMICS (3-2).**

Continuity/momentum equations; dimensional analysis; elements of two dimensional ideal flow; thin-airfoil, finite wing theory. **PREREQUISITE:** AE 2042.

**AE2036 PERFORMANCE AND STABILITY (3-2).**

Model atmosphere; defined airspeeds; aircraft performance including climb, range, endurance and energy management; principles of longitudinal, lateral and directional static stability and control of aircraft. **PREREQUISITE:** AE 2035.

**AE2042 FUNDAMENTALS OF THERMO-FLUID DYNAMICS (3-2).**

Properties of fluids. Principles of continuity, momentum, and energy for incompressible and compressible fluids; control volume formulations. Second law of thermodynamics: entropy and irreversibilities; equations of state, properties of pure substances; power cycles. Viscous flows, boundary layer concepts.

**AE2043 FUNDAMENTALS OF GAS DYNAMICS (3-2).**

Concepts of compressible flows, adiabatic/isentropic flow; normal shocks, moving and oblique shocks, Prandtl-Meyer flow; Fanno and Rayleigh flow; introduction to reaction propulsion systems.

**AE2801 AERO-LABORATORIES (3-2).**

An introduction to modern experimental techniques and instrumentation. Lectures and demonstrations in the use of sensing devices and data acquisition systems, data reduction and analysis, report writing. Selected experiments in all aeronautical laboratories. **PREREQUISITES:** AE 2021, 2035, 2043, and 2015 (concurrent) or equivalent.

**AE2820 INTRODUCTION TO SPACECRAFT STRUCTURES (Intended for Curriculum 591) (3-2).**

Structural loads: launch, on-orbit, maneuver, thermal. Configuration layout, design criteria. Stress-strain, bending, torsion. Strain-displacement, equilibrium, constitutive laws. Materials for space structure. Stability concepts, failure criteria. Structural modeling. Structure/control integration for large flexible systems.

**AE2840 BASIC FLUID & GAS DYNAMICS FOR SPACE APPLICATIONS (Intended for Curriculum 591) (3-2).**

Introduction to the laws of thermodynamics, entropy, processes with perfect and real gases, mass and energy conservation, Rankine & Brayton power cycles, momentum conservation and thrust production, compressible and viscous flow analysis for internal and external problems from continuum to free molecule.

## Upper Division or Graduate Courses

**AE3005 SURVEY OF AIRCRAFT & MISSILE TECHNOLOGY (For Non-Aero. Eng. Students) (4-0).**

A survey of aeronautical engineering concepts as applied to airplanes and missiles, starting with explanations of the basic principles of aerodynamics, performance, propulsion, etc., and extending to examples of these principles in present-day hardware.

**AE3101 FLIGHT VEHICLE STRUCTURAL ANALYSIS (3-2).**

Graduate core course in structures covering basic definitions and field equations for solid bodies, two-dimensional stress analysis, thin skin and thick skin wing bending analysis, fracture and fatigue theory. PREREQUISITE: AE 2021 or equivalent.

**AE3201 SYSTEM SAFETY MANAGEMENT AND ENGINEERING (4-0).**

An introduction to System Safety, with emphasis on the requirements imposed by MILSTD-882A. Fundamental mathematical concepts (probabilities, distribution theory, Boolean algebra); safety analysis techniques (hazard analysis, fault-tree analysis, sneak circuit analysis); safety criteria, tasks, data, and documentation; lifecycle considerations.

**AE3251 AIRCRAFT COMBAT SURVIVABILITY (4-2).**

This course brings together all of the essential ingredients in a study of the survivability of fixed wing, rotary wing and missile aircraft in a hostile (non-nuclear) environment. The technology for increasing survivability and the methodology for assessing the probability of survival in a AAA/SAM/Laser environment are presented in some detail. Topics to be covered include: current and future threat descriptions; the mission/threat analysis; combat data analysis of SEA and Mid-East losses; vulnerability reduction techniques and technology for the major aircraft systems; susceptibility reduction concepts and equipment for reducing the probability of detection and avoidance of the threat; and vulnerability, susceptibility and survivability assessment and trade-off methodology. In-depth studies of the survivability of several fixed wing and rotary wing aircraft will be presented. PREREQUISITE: U.S. citizenship and SECRET clearance.

**AE3304 ROTARY WING AIRCRAFT TECHNOLOGY. (For Non-Aero. Eng. Students) (3-2).**

A course designated to familiarize the student with the major aerodynamic, propulsive, structural, and stability and control aspects of rotary wing aircraft, past and current helicopter developments, technology status and problems. PREREQUISITE: Consent of instructor.

**AE3305 V/STOL AIRCRAFT TECHNOLOGY. (For Non-Aero. Eng. Students) (4-0).**

Basic aerodynamics and propulsion principles and phenomena, past and current vertical take-off and landing aircraft developments, current technology status and problems. U. S. Navy V/STOL aircraft requirements and acquisition programs. Russian V/STOL aircraft and assessment of USSR-V/STOL aircraft technology and trends, impact of V/STOL aircraft technology on naval systems acquisition and operations. PREREQUISITE: Consent of instructor.

**AE3340 DYNAMIC STABILITY OF AEROSPACE VEHICLES (3-2).**

Free and forced response of physical systems; damped/undamped; eigenvalue problem solutions. Stability derivatives; aircraft equations of motion; uncoupled and cross-coupled modal solutions. PREQUISITES: AE 2015 and 2036.

**AE3341 CONTROL OF AEROSPACE VEHICLES (3-2).**

Classical and modern control theory applied to aircraft and missiles; Bode, Nyquist and Root Locus concepts; state-variable feedback, auto-pilot design, stability augmentations systems. PREREQUISITE: AE 3340.

**AE3451 AIRCRAFT AND MISSILE PROPULSION (3-2).**

Description, design criteria, on-and off-design cycle analysis and performance of ramjets, turboprops, turbojets, and turbofans. Analysis of components: inlets, compressors, combustors, turbines and nozzles. Current state of the art, and impact of trends in propulsion technology. PREREQUISITE: AE 2043.

**AE3501 AERODYNAMIC ANALYSIS (3-2).**

Introduction to aerodynamic analysis methods for subsonic and supersonic flight vehicles. Developments proceed from the three-dimensional Navier-Stokes equations to various approximation methods for linearized, inviscid, subsonic and supersonic flows over airfoils and wings; discussion of sweepback effects and area ruling; introduction to DATCOM methods; laminar and turbulent boundary layer analysis; use of computer programs based on panel, vortexlattice and other methods. PREREQUISITES: AE 2043, AE 2035.

**AE3701 MISSILE AERODYNAMICS (4-1).**

Potential flow, thin-airfoil and finite wing theories. Linearized equations, Ackeret theory, Prandtl-Glauert transformations for subsonic and supersonic wings. Planform effects. Flow about slender bodies of revolution, viscous crossflow theory. PREREQUISITE: AE 2043.

**AE3705 AIR DEFENSE LETHALITY (4-1).**

This course examines the design and effectiveness of anti-aircraft guns and missiles, both surface-based and airborne. The techniques and procedures for target detection, target tracking, and propagator flyout (both guided and ballistic) are presented and quantified. Target signatures for radar, IR,

and visually directed systems are examined. The types of warheads and fuzes on small arms, anti-aircraft artillery, and guided missiles are presented. The vulnerability of the target to the damage mechanisms is examined, and the procedures for assessing the measures of target vulnerability are described. Total system lethality is evaluated by determining the probability of target kill given a single shot and given an encounter. Countermeasures used by the target for reducing the air defense lethality are also described.

**AE3711 BASIC AERODYNAMICS FOR MISSILES (Intended for Non-Aero Eng. Students) (4-0).**

A first course in aerodynamics principles applied to subsonic/supersonic missiles. PREREQUISITE: Completion of an Engineering/Science Core or equivalent.

**AE3802 ADVANCED AERONAUTICAL MEASUREMENT TECHNIQUES AND TEST FACILITIES (3-3).**

This course is intended to introduce the student to aeronautical measuring techniques and test facilities used by NASA and the aerospace industry during the research, development, and testing phase (RDT&E) of aircraft and missile systems. Applications of laser-doppler velocimetry, hot wire instrumentation, flow visualization methods and modern data acquisition systems will be demonstrated. Field trips to NASA Ames Research Center will be arranged to show how the advanced techniques and facilities are applied to solve real-world problems in aeronautics. PREREQUISITE: AE 2801.

**AE3804 THERMAL CONTROL OF SPACECRAFT (Intended for Curriculum 591) (3-0).**

Fundamentals of thermal radiation. Vehicle equilibrium temperature. Effects of coatings, and of orbit, on vehicle temperature;

the transient case (earth shadow). Heat rejection systems: free-space and non-free-space. Weight optimizations. Effect of manifolds. Design and synthesis examples. **PREREQUISITE:** AE 2840.

### **AE3811 SPACE SYSTEMS LABORATORY. (Intended for Non-Aero Engr. Students) (0-2).**

The laboratory will be used to support the Naval Postgraduate School (NPS) experiments to be flown on board Space Shuttle or on other Spacecraft. The laboratory does not consist of canned experiments; the specific activity depends on the nature of the experiment currently being prepared for flight. Course may be repeated for additional credit to continue work on the project. **PREREQUISITE:** Consent of instructor.

### **AE3815 INTRODUCTION TO SPACECRAFT DYNAMICS. (Intended for Curriculum 591) (4-0).**

Rotating coordinates; orientation angles. Velocities, accelerations, equations of motion. Attitude stabilization considerations. Three-axis control. **PREREQUISITES:** AE 2015 and AE 2820.

### **AE3850 PROPULSION FOR SPACE APPLICATIONS. (Intended for Curriculum 591) (4-0).**

This course provides an introduction to propulsion for space applications. It begins with an evaluation of energy requirements for specific missions and an overview of available and projected propulsion devices. Mission analysis (trajectories, staging, etc.) is considered, followed by analysis of each of the major propulsion systems (airbreathing launch vehicles, chemical, electrothermal, ion, electromagnetic). Characteristics of several advanced concepts (nuclear, laser) are also considered. **PREREQUISITE:** AE 2840.

### **AE3900 SPECIAL TOPICS IN AERONAUTICS (V-0).**

Directed graduate study or laboratory research. Course may be repeated for additional credit if topic changes. **PREREQUISITE:** Consent of Department Chairman.

#### Graduate Courses

### **AE4000 AERONAUTICAL ENGINEERING SEMINAR (1-0).**

Oral presentations of material not covered in formal courses. Topics cover a wide spectrum of subjects ranging from reports of current research to survey treatments of fields of scientific and engineering interest.

### **AE4102 ADVANCED AIRCRAFT/ MISSILE STRUCTURAL ANALYSIS (3-2).**

The finite element method of structural analysis will be studied and applied to aircraft and missile structures. Capabilities of the current finite element computer programs will be discussed. An introduction to the theory of structural dynamics and stability will also be presented. **PREREQUISITE:** AE 3101.

### **AE4103 ADVANCED AIRCRAFT CONSTRUCTION (3-2).**

A course covering the manufacturing techniques and analysis of composite materials and sandwich construction. Theories of failure, damage and repair. Advanced design concepts. **PREREQUISITE:** AE 3101.

### **AE4202 RELIABILITY IN STRUCTURES AND MATERIALS (4-0).**

A course providing the background and specifics associated with the design, certification and maintenance of structures in critical applications. The background includes an introduction to probability, reliability in design, and statistical modeling. The specifics include reliability, testing and statistical modeling of structures with applications to materials development, life durability characterization, proof-test, and maintenance of advanced composite materials. **PREREQUISITE:** Graduate standing in an Engineering/Science Curriculum.

**AE4273 AIRCRAFT DESIGN (3-2).**

A course in conceptual design methodology which centers around an individual student design project. It draws upon all of the aeronautics disciplines and provides the student with experience in their application to design. **PREREQUISITE:** Completion of the Aero Graduate Core.

**AE4276 AVIONICS SYSTEM DESIGN (3-2).**

Course will develop digital control concepts for aircraft applications; methodology of designing a digital flight control system for a high performance aircraft; review of sensor and actuator characteristics. A detailed case study of a digital flight control system performed by students. **PREREQUISITES:** AE 4342 and 4276.

**AE4304 HELICOPTER PERFORMANCE (3-2).**

The performance characteristics of rotary wing aircraft. Blade motion, momentum theory, blade element theory, tip loss factor, ground effect, hover, vertical flight, forward flight, climbing flight, auto-rotation, tail rotors, range and endurance, and multiple rotors. Numerical problems in helicopter performance. **PREREQUISITE:** Aero Preparatory Phase or equivalent.

**AE4305 V/STOL AIRCRAFT TECHNOLOGY (3-2).**

Types of V/STOL aircraft, fundamental principles, main performance characteristics, and propulsion requirements; STOL technology: mechanical high-lift devices, powered-lift devices, jet flaps, augmentor wings; VTOL technology: flow vectoring devices, lift engine and lift fan technology, augmentor wings, airframe/propulsion system interactions, ground interference effects; V/STOL stability and control considerations, han-

dling qualities; review of current NAVY V/STOL requirements and programs. **PREREQUISITE:** Aero Graduate Core or permission of instructor.

**AE4306 HELICOPTER DESIGN (3-2).**

Engineering problems that are to be found in rotary-wing design are presented for solution to develop a basic understanding of the conceptual design process for both single and multi-rotor helicopters. Interfaces of sub-systems and the required design trade-offs, including economic and operational factors, are emphasized. A preliminary design of a single rotor helicopter is conducted to meet specified requirements, and the performance of the resulting vehicle is evaluated. **PREREQUISITE:** AE 4304.

**AE4307 ADVANCED HELICOPTER DESIGN (3-2).**

An extension of the conceptual design concept to a more detailed design. Elements of static and dynamic stability, control, weight and balance, detailed sizings, and effects of parameter variation are considered. The detailed design will usually be limited to a single area. **PREREQUISITE:** AE 4306.

**AE4317 ADVANCED FLIGHT VEHICLE STRUCTURAL DYNAMICS (4-0).**

Response of single and multiple degree-of-freedom systems; vibrations of continuous systems - rods, beams and plates. Finite element formulation for structural dynamics problems in fixed-wing and rotary-wing aircraft, flexible spacecraft and large space structures. Computational methods for dynamic response. Aspects of vibration testing. Response to random and acoustic excitation. **PREREQUISITES:** Ordinary differential equations, matrix algebra and consent of instructor.

**AE4318 AEROELASTICITY (4-0).**

Response of discrete and continuous elastic structures to transient loads and to steady oscillatory loads. Static aeroelasticity, non-stationary airfoil and wing theory. Unsteady missile aerodynamics. Application to the flutter problem. Transient loads, gusts, buffet, and stall flutter. PREREQUISITE: AE 3340.

**AE4323 FLIGHT TEST ENGINEERING (3-2).**

Flight test analysis for pitot-static calibration, cruise and climb performance, stall testing, longitudinal static and dynamic stability, maneuvering stability, lateral-directional stability, transonic flying qualities, and helicopter flight testing. Includes a week-long in-flight laboratory

**AE4342 ADVANCED CONTROL FOR AEROSPACE SYSTEMS (3-2).**

State variable analysis for aircraft and missile systems, state variable estimators (observers). Optimal control, Kalman filtering techniques. Topics from non-linear systems and/or stochastic processes. PREREQUISITE: AE 3341.

**AE4343 GUIDED WEAPON CONTROL SYSTEMS (3-2).**

Detailed analysis of tactical missiles, performance of target trackers, basic aerodynamics of missiles, missile autopilot design, missile servos and instruments, line of sight guidance loops, terminal guidance, proportional navigation. PREREQUISITE: AE 3341 or equivalent.

**AE4431 AEROTHERMODYNAMICS & DESIGN OF TURBOMACHINES (3-3).**

Flow and energy exchange in compressors and turbines, and current engineering methods for their aerodynamic design, test, and measurement. PREREQUISITE: Aero Preparatory Phase or equivalent.

**AE4451 AIRCRAFT ENGINE DESIGN (3-2).**

The design process, aircraft-engine con-

straints, mission constraints, on-design and off-design cycle analysis, engine sizing for installed performance, component designs (fans, compressors, turbines, burners, inlets, exhaust nozzles). PREREQUISITE: AE 3451.

**AE4452 ROCKET AND MISSILE PROPULSION (4-0).**

Applications and analysis of solid-propellant rockets, ramjets, dual-mode ramjets and ducted rockets. Propellant selection criteria and characteristics, combustion models and behavior, performance analysis, technology requirements. PREREQUISITE: AE 3451.

**AE4502 HIGH-SPEED AERODYNAMICS (4-0).**

Transonic aerodynamics; numerical solutions to potential equations; airfoil analysis; shock-capturing. Method of characteristics; development of system of partial differential equations; 2-D and axisymmetric nozzle analysis; nozzle design. Hypersonics; flow past airfoils, slender and blunt bodies; real gas effects; similarity principles. Introduction to compressible boundary layers. Numerical problems in transonic, supersonic, hypersonic flows. PREREQUISITE: AE 3501.

**AE4503 MISSILE FLIGHT DYNAMICS (4-0).**

The aerodynamics of missiles and guided projectiles for various speed regimes and motions. Topics include slender body and linearized theory as well as nonlinear aerodynamic effects, coupling effects, Magnus effects, etc. The impact of these effects on missile flight dynamics, guidance and control is included. PREREQUISITE: AE 3501.

**AE4504 CONVECTIVE HEAT AND MASS TRANSFER (4-0).**

Convective heat and mass transfer on internal and external flow systems common to aerospace vehicles; laminar and turbulent flows. Analytic techniques, integral and numerical methods, experimental correla-

tions. Effects of variations in thermophysical properties. PREREQUISITE: AE 3501.

#### **AE4505 LASER/PARTICLE BEAM TECHNOLOGY (3-2).**

Survey of different types of particle beams, including electrical, gasdynamic and chemical lasers, electron beams; resonator cavities for lasers and external propagation mechanisms; high energy lasers and charged particle beams, military applications. PREREQUISITE: Consent of instructor.

#### **AE4506 RAREFIED GAS DYNAMICS (4-0).**

Topics include kinetic theory, distribution functions, Boltzmann equation, transport phenomena from a kinetic theory viewpoint, free molecular flow, transitional flow between continuum and free molecular flow, dynamic coefficient and numerical solutions. PREREQUISITE: Consent of instructor.

#### **AE4632 COMPUTER METHODS IN AERONAUTICS (3-2).**

Use of the digital computer in numerical methods. Classification of aeronautical engineering problems as equilibrium, eigenvalue or propagation problems. Computer solution procedures developed for the ordinary and partial differential equations of gas dynamics, heat transfer, flight mechanics and structures. PREREQUISITE: Aero Preparatory Phase or equivalent.

#### **AE4641 AERONAUTICAL DATA SYSTEMS (3-2).**

A design-project-oriented course utilizing microprocessor technology with emphasis upon aeronautical engineering applications. Both software and hardware aspects of system integration will be considered for engineering tradeoffs during problem definition and solution. PREREQUISITE: EC 2170 or equivalent.

#### **AE4702 MISSILE PROPULSION (Intended for Non-Aero Eng. Students) (4-0).**

Applications and analysis of solid propellant rockets, ramjets, dual-mode ramjets, and ducted rockets. Propellant selection criteria and characteristics, combustion models and behavior, performance analysis, technology requirements. PREREQUISITE: AE 3701.

#### **AE4703 MISSILE FLIGHT ANALYSIS. (Intended for Non-Aero Engr. Students) (4-1).**

Stability and control. Configuration determinants. Transient (dynamic) modes. Subsonic, transonic, supersonic force and moment data for performance calculations with short and long-range cruciform missiles and cruise missiles: acceleration, climb, ceiling, range and agility in maneuvering trajectories. PREREQUISITE: AE 3701

#### **AE4704 MISSILE SYSTEMS INTEGRATION. (3-2).**

A project oriented course developing micro-computer simulation of flight trajectories and target intercepts, focusing on tradeoffs among propulsion requirements, air loads, sensors, guidance laws, controls and structural components. PREREQUISITES: AE 4702 and 4703 or equivalent.

#### **AE4706 HIGH ENERGY LASER SYSTEM DESIGN (4-0).**

Types of lasers including excimer lasers. Laser performance. Adaptive optics. Propagation of laser beams. Pointing and tracking. Acquisition and handoff. Fire control. Damage mechanisms. Advantages and limitations of both CW and Pulsed. Applications include ASMD, SAM-suppression, anti-tank optics, and space warfare. High energy laser systems are contrasted with other directed energy concepts. Students design a complete laser system. PREREQUISITE: Completion of an Engineering/Science Core or equivalent.

**AE4712 SURVEY OF TACTICAL MISSILE SYSTEMS. (Intended for Non-Aero Eng. Students) (3-2).**

Overview of missile technology: air loads, propulsion, guidance and control, sensors. Simple trajectory analysis. Performance tradeoffs. **PREREQUISITE:** AE 3711 or consent of instructor.

**AE4816 DYNAMICS OF FLEXIBLE SPACE STRUCTURES (Intended for Curriculum 591) (4-0).**

Characterization of periodic and random structural vibrations encountered in space systems. Physical coordinates and modal coordinates. Mass, stiffness, and damping matrices. Single-degree-of-freedom and multiple-degree-of-freedom systems. Forced response analysis. The general mobility matrix. System identification by input-output relations. Random excitation and autospectral density. Problems associated with parameter estimation. Introduction to nonlinear systems.

**AE4819 SPACECRAFT DYNAMICS LABORATORY (Intended for Curriculum 591) (2-3).**

Fast Fourier Transforms and the modal characteristics of flexible structures in the time and frequency domains. The design of an identification experiment including types of sensors and actuators, optimum sensor and actuator location, optimum sampling rate, anti-aliasing filters, and uncertainties in system modeling. Feedback control. Data acquisition and data handling. Choice of materials for the space environment. Nondestructive evaluation and health monitoring of space structures. Design and use of damping for vibration suppression.

**AE4830 SPACECRAFT SYSTEMS I. (Intended for Curriculum 366) (3-2).**

Examination of the factors affecting space systems selection and design, impact of orbital and sensor characteristics, ground facilities requirements, manufacturing, testing and verification techniques and requirements. Payload design considerations including impact of antennas. RF environment and EMI. Mechanical and electrical design of space systems. Temperature control. Attitude control. Special techniques associated with large space structures. **PREREQUISITES:** PH 3514, completion of Space Curricula Core or equivalent.

**AE4831 SPACECRAFT SYSTEMS II. (Intended for Curriculum 366) (4-0).**

Survivability of space systems in wartime is discussed along with design features to improve protection. Case studies are selected to emphasize and illustrate material presented previously in AE 4830 as well as material in AE 4831. The students design a space system to meet mission requirements. **PREREQUISITE:** AE 4830.

**AE4870 SPACECRAFT DESIGN AND INTEGRATION. (Intended for Curriculum 591) (4-0).**

This course concentrates on the overall design aspects of the spacecraft bus. Emphasis is on the integration of subsystems, test procedures and space qualifications to meet specific mission requirements. **PREREQUISITE:** Completion of Space Engineering Curriculum Core or equivalent.

**AE4900 ADVANCED STUDY IN AERONAUTICS (V-0).**

Directed graduate study or laboratory research. Course may be repeated for additional credit if topic changes. **PREREQUISITE:** Consent of Department Chairman.

## ANTISUBMARINE WARFARE ACADEMIC GROUP

**Robert Hathaway Bourke**, Associate Professor of Oceanography (1971); BS, Naval Academy, 1960; MS, Oregon State University, 1969; PhD, 1972.

**Alan Berchard Coppens**, Associate Professor of Physics (1969); B. Eng, Cornell University, 1959; MS, Brown University, 1962; PhD, 1965.

**James Norfleet Eagle, II**, Associate Professor of Operations Research (1973); PhD, Stanford University, 1975.

**James Vincent Sanders**, Associate Professor of Physics (1961); BS, Kent State University, 1954; PhD, Cornell University, 1961.

**Rex Hawkins Shudde**, Associate Professor of Operations Research 1962; BA and BS, University of California at Los Angeles, 1952; PhD, University of California at Berkeley, 1956.

**Charles William Therrien**, Associate Professor (1984); SB and SM, Massachusetts Institute of Technology, 1965; PhD, 1969.

**Carroll Orville Wilde**, Professor of Mathematics (1968); BS, Illinois State University, 1958; PhD, University of Illinois, 1964.

### Chairman:

R. Neagle Forrest, Professor,  
Code 71, Root Hall, Room 267,  
(408) 646-2653, AV 878-2653.

The Antisubmarine Warfare Academic Group is an association of faculty members representing separate academic disciplines. An academic group is a less formal organization than an academic department, and each professor in the group has an appointment in an academic department. The Antisubmarine Warfare Academic Group has administrative responsibility for the academic content of the Antisubmarine Warfare Program of Study. Teaching in this multidisciplinary program is carried out by faculty members attached to the following academic departments: Electrical and Computer Engineering, Mathematics, National Security Affairs, Oceanography, Operations Research, and

Physics. Thesis topics for students in this area of study are approved by the group and the final thesis is approved by the Chairman.

### MASTER OF SCIENCE IN APPLIED SCIENCE

The degree of Master of Science in Applied Science will be awarded at the completion of the multidisciplinary program.

The entire program must be approved by the Chairman of the ASW Group.

### COURSE OFFERINGS

**ST 0001 Seminar (0-1).**

Special lectures, and discussion of matters related to the ASW Program. **PREREQUISITE:** Enrollment in the ASW Curriculum and SECRET clearance.

**ST 0810 Thesis Research/Group Project (0-0).**

Students in the ASW Curriculum will enroll in this course while doing either an individual thesis or an equivalent group project involving several students and faculty.

**ST3000 STUDY PROJECT ON ASW SYSTEMS PERFORMANCE (0-2).**

This is a project course in which the project is a study and analysis of the performance of an assigned type of ASW system under a variety of operating conditions. **PREREQUISITE:** Enrollment in the ASW Curriculum or consent of the Group Chairman and **SECRET** clearance. Graded on a Pass/Fail basis only.

**ST4999 SPECIAL STUDIES IN ASW (V-0).**

A course designed to meet the needs of students for special work in advanced topics related to ASW. **PREREQUISITE:** Enrollment in the ASW curriculum and consent of the Group Chairman.

## AVIATION SAFETY PROGRAMS

**Vincent James Huth**, Captain, U.S. Navy; Director (1987)\*; MS, University of Southern California, 1984.

**Milton Harold Bank, II**, Associate Professor of Aeronautical Engineering and Safety (1971); PhD, Georgia Institute of Technology, 1971.

**Dana D. Barclay**, Lieutenant Commander, U.S. Navy; Instructor in Mishap Investigation (1988); MSSM, University of Southern California, 1987.

**Anthony P. Ciavarelli, Jr.**, Associate Professor of Psychology (1989); Ed.D., University of Southern California, 1987.

**Virgil B. Cook**, Commander, U.S. Navy, Instructor in Aviation Safety Programs (1987); MS, Naval Postgraduate School, 1979.

**Robert C. Figlock**, Major (LCol selectee), U.S. Marine Corps; Instructor in Aviation Safety Programs (1989); MSSM, University of Southern California, 1982.

**Robert Edward Joslin**, Captain, U.S. Marine Corps, Instructor in Rotary-Wing Aerodynamics (1987); MSAE, Naval Postgraduate School, 1987.

An Aviation Safety Officer (ASO) This twenty-eight day course consists of approximately 146 classroom and laboratory hours, plus a two-day field trip. Subjects addressed in the classroom and laboratory include safety programs, mishap prevention techniques, operational aerodynamics and aerostructures, mishap investigation and reporting, psychology, safety law, and aeromedical support. During the field trip a Safety Survey of an operating squadron is made by the students.

Prior completion of college level courses in algebra and physics is highly desirable for the prospective student.

**Edward John Kennedy**, Adjunct Professor of Aviation Physiology (1972); MD, University of Iowa College of Medicine, 1962.

**Charles W. Nation, Jr.**, Commander, United States Navy; Instructor in Aviation Safety Programs (1989); BS, U.S. Naval Academy, 1969.

**Charles D. Pickett**, Captain (Medical Corps), U.S. Navy, Assistant Professor of Aeromedical Aspects of Safety (1987); DO, College of Osteopathic Medicine, University of Health Sciences, Kansas City, Missouri. 1962.

**Ronald Fred Rygg**, Lieutenant Commander, U.S. Navy; Instructor in Mishap Investigation (1988); BA, California Lutheran College, 1972.

**Stewart Wayne Schreckengast**, Lieutenant Commander, U.S. Navy; Instructor in Fixed-Wing Aerodynamics (1988); MSAE, Naval Postgraduate School, 1979.

**Frank P. Yasment**, Lieutenant Commander, U.S. Navy; Instructor in Mishap Reporting (1989); MBA, National University, 1985.

*\*The year of joining the Postgraduate School faculty is indicated in parentheses.*

Designated naval aviators and naval flight officers of the Navy and Marine Corps in the rank of Lieutenant, USN, and Captain, USMC, and above are eligible to attend. Exceptions must be approved by Type Commanders, or CMC, as appropriate. Details of quota control and class schedules are defined in NPSNOTICE 1520.

### Resident Students

Officers regularly enrolled in other curricula of the Naval Postgraduate School may qualify for the Aviation Safety Officer Certificate by completing these required courses: AO 2020,

## AVIATION SAFETY

---

AO 2030, AO 3000, AO 3050, and AO 3060. Substitutions of equivalent courses taken in other departments for some of these courses may be made upon approval of the Director of Aviation Safety Programs. For example, AO 2020 may be replaced by upper division or graduate courses in aeronautical engineering which cover the essential subject matter of the course.

### AVIATION SAFETY COMMAND COURSE

An Aviation Safety Command (ASC) course is offered eight times each year on a temporary additional duty basis to commanding officers, executive officers, OinCs of aviation detachments, officers screened for command, and staff officers in the rank of Lieutenant Commander, USN, and Major, USMC, and above. This course is designed to provide information which will assist commanding officers in conducting an aggressive mishap prevention program, and to prepare the graduate for the duties of Senior Member of a Mishap Board.

The course consists of approximately 34 classroom and laboratory hours addressing subjects including safety programs, safety psychology, aviation law, aircraft systems, mishap investigation, mishap and incident reports and endorsements, and aerospace medicine.

No academic credit is given for this course.

### DEPARTMENTAL COURSE OFFERINGS

#### Upper Division Courses

#### AO 2020 Aerodynamics for Aircraft Accident Prevention and Investigation (3-0).

Survey of aerodynamics, performance, stability and control of fixed wing/rotary wing aircraft. Effects of varying conditions, configurations, designs and crew techniques on critical areas of operation.

#### AO 2030 Aircraft Structural Analysis (1-0).

Strength of materials, design criteria, failure mechanisms. Recognition of failures, fatigue, brittle fractures, contribution of manufacturing and maintenance, analysis of evidence, corrosion control technology, and quality control concepts.

#### Upper Division or Graduate Courses

#### AO 3000 Problems in Accident Prevention and Investigation (0-4).

Management Theories, practices and techniques, developing applications for the organization and control of a squadron mishap prevention program. Problem-solving exercises in the application of system safety concepts in the squadron accident prevention and investigation effort. Through case-study methods, the course emphasizes mission accomplishment, conservation of resources, cost-effectiveness, and systems management in accident prevention, investigation, and reporting.

#### AO 3040 Safety Psychology (1-0).

Study of human reliability in survival-value environments; personality elements is safety motivation; identification and reduction of problems in human reliability.

#### AO 3050 Safety Law (1-0).

Study of leading cases and statutes concerning rights and duties in the safety disciplines. Emergency claims; quasicontractual duties. Criminal prosecution of safety violations. Legal duties of care. Special rules of evidence used by the courts in safety-related disputes.

#### AO 3060 Problems in Aviation Medicine (1-0).

Life-science considerations in accident prevention and investigation. Medical prediction. Effects of hypoxia, dysbarism, G-forces, spatial disorientation, diet, drugs, and exercise upon flight capabilities. Recognition of emotional difficulties; emotional considerations in accident prevention. Interpretation of autopsy reports.

**AO 3100 Management of Accident-Prevention Programs (3-2).**

Management theories, practices, communications and controls; automatic data-processing and analysis of accident statistics; legal consideration in safety management; use of systems safety in hazard identification.

**AO 3120 Technological Aspects of Accident-Prevention and Analysis (3-2).**

Topics include case studies of technological design-related aviation mishaps; identification of structural failure modes; computer and simulator methods in aeronautics; safety-related problems of Navy weapons systems evaluation and acquisition.

## COMMAND, CONTROL & COMMUNICATIONS (C3) ACADEMIC GROUP

**Carl Russell Jones**, Chairman and Professor (1965)\*; PhD, Claremont Graduate School, 1965.

**Dan Calvin Boger**, Associate Professor of Economics (1979); PhD, University of California at Berkeley, 1979.

**Kenneth L. Davidson**, Professor (1970); PhD, University of Michigan, 1970.

**Daniel Roy Dolk**, Associate Professor of Management Information Systems (1982); PhD, University of Arizona, 1982.

**Donald Paul Gaver, Jr.**, Distinguished Professor (1956); PhD, Princeton University, 1956.

**Thomas E. Halwachs**, Commander, U.S. Navy, Curricular Officer, Operations Analysis (1985); MS, Naval Postgraduate School, 1976.

**Wayne Philo Hughes, Jr.**, Adjunct Professor (1964); MS, Naval Postgraduate School, 1964.

**Donald A. Lacer**, C3 Chair Professor (1988); MS, University of California at Los Angeles, 1964.

**Gordon Eric Latta**, Professor (1979); PhD, California Institute of Technology, 1951.

**Michael Melich**, Professor (1983); PhD, Rice University, 1967.

**Paul Henry Moose**, Associate Professor (1980); PhD, University of Washington, 1970.

**James W. Mueller**, Captain, U.S. Navy, Curricular Officer, National Security Affairs/Intelligence (1985); MA, NSA-I, Naval Postgraduate School, 1977.

**Samuel Howard Parry**, Associate Professor (1972); PhD, Ohio State University, 1971.

**Gary Kent Poock**, Professor (1967); PhD, University of California at Berkeley, 1967.

**Thomas A. Schwendtner**, Captain, U.S. Air Force, Instructor (1989); MS, University of Colorado, 1989.

**Michael Graham Sovereign**, Professor (1970); PhD, Purdue University, 1965.

**James Grover Taylor**, Professor (1989); PhD, Stanford University, 1966.

**Allan W. Tulloch**, Commander, U.S. Navy, Instructor (1989); MS, Naval Postgraduate School, 1972.

**John M. Yurchak**, Lieutenant Commander, U.S. Navy, Instructor (1988); MS, Naval Postgraduate School, 1984.

*\*The year of joining the Postgraduate School Faculty is indicated in parentheses.*

### Chairman:

Carl R. Jones, Professor,  
Code 74, Spanagel Hall, Room 203,  
(408) 646-2618, AV 878-2618.

The Command, Control and Communications (C3) Academic Group is

an interdisciplinary association of faculty. An academic group is a less formal organization than an academic department, and each professor in the group has an appointment in an academic department. The C3 Academic Group has responsibility for the academic content of the Joint Command,

Control and Communications curriculum and a C3 research program. Thesis topics are approved by the Group and the final thesis is approved by the Chairman.

### **MASTER OF SCIENCE IN SYSTEMS TECHNOLOGY**

The degree of Master of Science in Systems Technology (Command, Control & Communications) will be awarded at the completion of an interdisciplinary program carried out in accordance with the following degree requirements.

The Master of Science in Systems Technology (Command, Control and Communications) requires a minimum of 45 quarter hours of graduate level work in four different academic disciplines, of which at least 15 hours must represent courses at the 4000 level in at least two of the disciplines. Within the course program there must be a specialization sequence consisting of at least three courses.

In addition to the 45 hours of course credit, an acceptable thesis must be completed.

The Program must be approved by the Chairman of the Command, Control and Communications Academic Group.

### **GROUP COURSE OFFERINGS**

#### **CC0001 SEMINAR (0-1).**

Special lectures and discussion of matters related to C3.

#### **CC0810 THESIS RESEARCH (0-0).**

Every student conducting thesis research will enroll in this course.

#### **CC3000 INTRODUCTION TO COMMAND, CONTROL & COMMUNICATIONS (4-0).**

Knowledge of current C3 systems and practice is introduced. A basic framework for understanding C3 is provided. Case studies are used as well as lessons learned from crises, field exercises and war gaming.

**PREREQUISITE:** Enrollment in the Joint C3 curriculum, OS 2103 (concurrently). SECRET clearance required.

#### **CC3001 MODELING COMMAND, CONTROL, AND COMMUNICATIONS SYSTEMS (4-0).**

An understanding of C3 modeling in the context of combat models and modeling is provided. The fundamental concepts of combat processes are studied. Specific models of weapons and sensors are included. Examples of current applications and research trends are included. **PREREQUISITES:** CC3000, OS2103. SECRET clearance required.

#### **CC3900 SPECIAL TOPICS IN COMMAND, CONTROL, AND COMMUNICATIONS (V-0).**

Supervised study in selected areas of command, control and communications to meet the needs of individual students. May be repeated for credit if course content changes. **PREREQUISITE:** Consent of Group Chairman. Graded on Pass/Fail basis only.

#### **CC4001 C3 SYSTEMS: STRUCTURE, PROCESS AND DYNAMICS (4-0).**

An understanding of C3 systems in the context of battle management is provided. The history of C3 is used to develop an understanding of the impact of physical and organizational technology on C3. A framework for C3 systems encompassing planning, directing, coordinating, controlling, and executing tasks embedded in an architecture is used to develop dynamic behavior. An overview of design principles is included. Examples of current systems and approaches to C3 is provided. **PREREQUISITES:** CC 3001, OS 3008, OS 3604. TOP SECRET clearance with eligibility for SPECIAL INTELLIGENCE information.

**CC4002 C3 SYSTEMS: PERFORMANCE AND EFFECTIVENESS EVALUATION****(2-4).**

An understanding of the performance and effectiveness evaluation of C3 systems is provided. Development and estimation of measures of performance, effectiveness and force effectiveness. Threat analysis. Experiments in determining C3 system effectiveness using war gaming are emphasized. Design of experiments. **PREREQUISITES:** CC 4001, OS 3604, and OS 3603. **TOP SECRET** Clearance with eligibility for **SPECIAL INTELLIGENCE** Information.

**CC4003 C3 SYSTEMS ENGINEERING****(2-4).**

The system engineering of C3 systems is studied. Emphasis will be on requirements determination. Effectiveness and cost modeling and estimation. Trade off analysis. Risk assessment. Threat assessment. A project will require the development of a system's requirements. **PREREQUISITES:** CC 4002, EO 3750 (concurrently). **TOP SECRET** Clearance with eligibility for **SPECIAL INTELLIGENCE** Information.

**CC4004 C3 ISSUES AND PROBLEMS****(4-0).**

Advanced study of special topics related to C3. Topics may include interoperability, C3CM, intelligence processes and NATO C3. Usually there are three topics per course offering. **PREREQUISITE:** CC 4003. **TOP SECRET** Clearance with eligibility for **SPECIAL INTELLIGENCE** Information.

**CC4113 POLICIES AND PROBLEMS IN C3 (5-0).**

An in-depth study of the fundamental role C3 systems fulfill in operational military situations, including crisis warning and crisis management. An analysis of the changing role of intermediate level headquarters and its impact on C3 system requirements and design. Additionally, the course considers the complexities imposed on C3 systems as the force structure becomes more heterogeneous, as in the case of NATO. Case study of selected incidents and systems. Specifically for students in the C3 curriculum. **PREREQUISITES:** CM 3111, OS 4602.

**CC4200 COMBAT SYSTEMS ENGINEERING (4-0).**

This course examines the generation of combat system requirements and the relationships between operational, financial planning, and technical communities in fielding a combat system that fulfills those requirements. The contribution of the technical disciplines to the statement and solution of decision problems in design, priority setting, and scheduling are explored through the use of currently outstanding issues. **PREREQUISITES:** Consent of the instructor, Basic probability and statistics, 4th quarter standing, **SECRET** Clearance. Graded on a Pass/Fail basis only.

**CC4900 ADVANCED STUDY IN COMMAND CONTROL AND COMMUNICATIONS (Variable).**

Supervised study in selected areas of command, control, and communications to meet the needs of individual students. May be repeated for credit if course content changes. **PREREQUISITE:** Consent of Group Chairman. Graded on a Pass/Fail basis only.

## DEPARTMENT OF COMPUTER SCIENCE

**Robert B. McGhee\***, Chairman and Professor (1986); PhD University of Southern California, 1963. Robotics and artificial intelligence.

**Hassanein H. Amer**, Assistant Professor (1987); PhD Stanford University, 1987. Computer architecture: fault-tolerance (on leave through 1 Oct 1990).

**Patrick D. Barnes**, Captain, U.S. Air Force, Instructor (1989); MS Air Force Institute of Technology, 1988. Software engineering and programming languages.

**Valdis Berzins**, Associate Professor (1986); PhD, Massachusetts Institute of Technology, 1979. Software engineering, specification languages, computer-aided design and engineering databases.

**Leigh W. Bradbury**, Lieutenant Commander, U.S. Navy, Instructor (1988); MS, Corpus Christi State University, 1985. Aviation and combat systems, simulations and operational scheduling.

**Gregory D. Buzzard**, Assistant Professor (1988); PhD University of Michigan, 1988. Parallel and distributed systems, computer security.

**David A. Erickson**, Adjunct Professor (1988); MS, Stanford University, 1986. Chromatic scheduling, intelligent tutoring systems and educational technology.

**Rachel Griffin**, Lieutenant Commander, U.S. Navy, Instructor (1988); MS, Naval Postgraduate School, 1984. Programming languages: algorithm analysis and formal specifications.

**Richard W. Hamming**, Adjunct Professor (1976); PhD, University of Illinois, 1942. Coding theory, numerical methods and philosophy of science.

**David K. Hsiao**, Professor (1982); PhD, University of Pennsylvania, 1968. Database systems: multimodel, multilingual and multi-backend systems.

**Gary Hughes**, Commander, U.S. Navy, Instructor (1986); MS, Naval Postgraduate School, 1983. Computer security and operating systems.

**Uno R. Kodres**, Professor (1963); PhD, Iowa State University, 1958. Distributed computing: multiprocessors, real-time systems development.

**Yuh-jeng Lee**, Assistant Professor (1987); PhD, University of Illinois at Urbana, 1987. Artificial intelligence, software engineering and automatic programming.

**LuQi**, Assistant Professor (1986); PhD, University of Minnesota, 1986. Software engineering, scientific computing, rapid prototyping and embedded systems.

**Vincent Y. Lum**, Professor (1985); PhD, University of Illinois at Urbana, 1966. Database systems, AI & DBMS, information system design and analysis, office automation and office information systems.

**G.M. Lundy**, Assistant Professor (1988); PhD, Georgia Institute of Technology, 1988. Data communications, computer networks, formal models of communications protocols.

**Michael L. Nelson**, Major, U.S. Air Force, Assistant Professor (1989); PhD, University of Central Florida, Orlando, 1988. Programming languages: object-oriented, logic and functional languages.

**George A. Rahe**, Professor Emeritus (1965); PhD, University of California at Los Angeles, 1965.

**Neil C. Rowe**, Associate Professor (1983); PhD, Stanford University, 1983. Artificial intelligence: path planning, database interfaces, vision and tutoring.

**Timothy J. Shimeall**, Assistant Professor (1988); PhD, University of California at Irvine (1988). Software engineering: testing, fault-tolerance, empirical evaluation techniques.

**Man-Tak Shing**, Associate Professor (1988); PhD, University of California at San Diego, 1981. Design and analysis of algorithms, computational geometry and robot motion planning.

**Louis D. Stevens**, Adjunct Professor (1984); MS, University of California at Berkeley, 1949. Computer architecture, logic design and software engineering.

**Lawrence J. Williamson**, Adjunct Professor (1989); PhD, University of California at Berkeley, 1979. Software systems.

**C. Thomas Wu**, Associate Professor (1985); PhD, University of California at San Diego, 1983. Multimedia database systems, object-oriented data modeling and programming, and user interface design.

**John M. Yurchak**, Lieutenant Commander, U.S. Navy, Instructor (1988); MS, Naval Postgraduate School, 1984. Programming languages: design, translation and implementation; Programming methodology: tools and environments.

**Michael J. Zyda**, Associate Professor (1984); DSc, Washington University, 1984. Computer graphics: real-time, 3D visual simulation systems, graphics workstation performance measurements.

\* *The year of joining the Postgraduate School Faculty is indicated in parenthesis.*

Tel. (408) 646-2239

#### BRIEF DESCRIPTION OF THE DE- PARTMENT

The Department of Computer Science provides graduate training and education in major areas of computer science. Thus, both basic and advanced graduate courses are offered. Course work and research lead to either the degree of Master of Science or Doctor of Philosophy. The requirements to complete either program are rigorous and are comparable to those of other major universities.

#### MASTER OF SCIENCE IN COMPUTER SCIENCE

The degree of Master of Science in Computer Science is awarded upon the satisfactory completion of a program, approved by

## COMPUTER SCIENCE

---

the Chairman, Computer Science Department, which satisfies, as a minimum, the following degree requirements:

a. At least 40 quarter hours of graduate-level work of which at least 12 quarter hours must be at the 4000 level.

b. The Program shall include at least:

28 quarter hours in Computer Science

12 quarter hours in the other disciplines

c. Completion of an approved sequence of courses constituting specialization in an area of Computer Science.

d. Completion of an acceptable thesis in addition to the 40 quarter hours of course work.

### DOCTOR OF PHILOSOPHY IN COMPUTER SCIENCE

The Department of Computer Science has a program leading to the degree of Doctor of Philosophy. Areas of special strength in the department are Artificial Intelligence/Robotics, Database Systems, Software Engineering, Computer Graphics and Computer Architecture. Minors in areas of other departments are possible. A noteworthy feature of these areas of research is that the candidate's research may be conducted off-campus in the candidate's sponsoring laboratory or unit of the Federal Government. The degree requirements are as outlined under the general school requirements for the Doctor's degree.

### COMPUTER SCIENCE LABORATORIES

#### Laboratory Overview

The departmental laboratories are designed to provide effective computing facilities to support instruction and research in

the core areas of computer science. There are currently seven such laboratories: the Computer Science Academic Computing Laboratory, the Database Systems Laboratory, the Graphics and Video Laboratory, the Software Engineering Laboratory, the Microcomputer Systems Laboratory, the Visual Database and Interface Laboratory and the Artificial Intelligence Laboratory.

#### Computer Science Academic Laboratory

The main pieces of equipment in the Computer Science Academic Laboratory are a network of SUN file servers and diskless workstations, and a VAX 11/785 (Unix). The Academic Laboratory also supports an Eikonix digitizer camera, several laser printers and a large number of terminals (50+ on-line) and other miscellaneous support equipment. The Academic Laboratory computers are connected via an Ethernet network. The VAX 11/785 is connected to the outside world via MILNET, which provides access to ARPANET, CSNET and BITNET. The Academic Laboratory provides a general-purpose, time-sharing environment for various applications throughout the Computer Science Department.

#### Database Systems Laboratory

The current Database Systems Laboratory consists of nine Integrated Solutions, Inc. (ISI) workstations. The ISI workstations each contain a Motorola 68020 processor, and some 600+MB of disk storage. These workstations are used in conjunction with the Academic Laboratory's VAX computers to provide research and instruction in Database Systems. The workstations are connected together via their own Ethernet network and are connected through one of the workstations to the departmental local area network.

### **Graphics and Video Laboratory**

The current Graphics and Video Laboratory consists of five Silicon Graphics, Inc. IRIS graphics workstations. There are two IRIS 4D/120GTX dual-processor workstations, one IRIS 4D/70GT and two older IRIS-3120 workstations. These workstations are used to provide research and instruction in real-time, interactive graphics. The primary research use of the systems is in the production of inexpensive, three-dimensional visual simulation systems and in the production of graphics workstation performance measurements. The IRIS 4D/120GTX workstations are based on the MIPS R-2000 processor and are rated at 20 million instructions per second integer performance. The workstations are capable of filling some 100,000 z-buffered, Gouraud-shaded polygons per second. The laboratory is equipped with a real-time RGB to NTSC scan converter and S-VHS video capture equipment.

### **Software Engineering Laboratory**

The current Software Engineering Laboratory consists of two Sun file servers and three diskless node workstations. The Sun workstations are Unix-based, general purpose workstations and are equipped with the Ada programming language and a variety of software engineering tools. An upgrade of the laboratory is currently underway to provide three additional file servers and thirty more diskless node workstations. The purpose of this laboratory is to provide a state-of-the-art educational environment for graphics-based, software development automation. Current work in the laboratory is on rapid prototyping, specification languages and computer-aided software system design.

### **Microcomputer Systems Laboratory**

The current Microcomputer Systems Laboratory consists of some 35 Zenith Z248 microcomputers in support of research and instruction. The main use of the Z248 microcomputers is for instruction in beginning programming with the Department of Defense's standard computer language ADA. The Z248s are also used for research and instruction in microprocessor programming, microprocessor architectures, networking and distributed systems. The Z248s are networked together to provide access to shared resources such as printers and bulk storage systems.

### **Visual Database and Interface Laboratory**

The current Visual Database and Interface Laboratory consists of Macintosh II, and IBM PC/AT compatible microcomputers. The main use of the laboratory is research and instruction in human-computer interfaces for data retrieval systems. The main projects in the laboratory are a hyper-text system for the paperless ship project and a graphics language for databases project (GLAD).

### **Artificial Intelligence Laboratory**

The Artificial Intelligence Laboratory consists of 8 Sun diskless workstations, 8 ISI workstations, 4 TI Explorer LISP machines, and 4 Symbolics LISP machines. The Sun and ISI workstations are Unix-based, general purpose workstations. The workstations are outfitted with LISP, Prolog and various knowledge-based software tools. The Symbolics machines represent the state of the art with respect to AI computing systems. One of the Symbolics systems contains a Pixar Imaging Computer. A Xenologic Prolog attached processor and accompanying SUN workstation are also part of the laboratory.

**DEPARTMENTAL COURSE  
OFFERINGS**

**CS 0001 COLLOQUIUM (No Credit).**

Distinguished lecturer series. Attendance is required by students in their third through sixth quarters.

**CS 0100 REFRESHER FOR BEGINNING PROGRAMMING (2-1).**

An introduction to computer algorithms, programs and hardware. Using structured programming and stepwise refinement techniques, students receive classroom instruction plus design and test programs in the laboratory. Computer projects of increasing difficulty are assigned. This course is not graded.

**CS 0101 REFRESHER FOR LABORATORY SYSTEMS (2-1).**

Intended for computer science majors, to provide an introduction to computer science and computing laboratory facilities. Emphasis is on fundamental concepts of operating systems, user interfaces, programming environments and program development tools. Topics include a survey of text processors, formatters and editors, compilers, linkers, and other software tools, together with the basic principles and procedures for productive document/software development. Additional topics include fundamentals of data structures and algorithms. This course is not graded.

**CS 0102 REVIEW FOR DIRECT INPUT STUDENTS (2-1).**

An individualized course to cover the topics of CS 0100 and CS 0101. The course is open only to first quarter computer science majors who did not take CS 0100 and CS 0101. This course is not graded.

**CS 0810 THESIS RESEARCH (0-0).**

Every student conducting thesis research will enroll in this course.

Upper Division Courses

**CS 2450 COMPUTER PROGRAMMING WITH FORTRAN (3-1).**

This course provides an overview of the computer system: hardware, software, and the operating system. Algorithms and programs are developed using a structured approach and stepwise refinement. The design and testing of computer programs in FORTRAN are studied, and practiced by the student in the laboratory. Computer projects of increasing difficulty are assigned. GRADED ON PASS/FAIL BASIS ONLY.

**CS 2920 INTRODUCTORY TOPICS IN COMPUTER SCIENCE (2-4 to 4-1).**

Designed to support introductory subject matter of special interest, dependent upon faculty availability. Topics will typically augment those offered by the basic core courses. This course may be lecture/lab oriented or self-paced, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic.

**CS 2970 STRUCTURED PROGRAMMING WITH ADA (4-1).**

An introduction to problem solving and structured programming with ADA, a high-level, block-structured programming language. This course is for computer science majors and other students with a deep interest in the subject. Fundamental techniques of problem solving and using ADA to implement the solutions of non-numerical problems are presented. Several programming projects aimed at practicing these techniques are assigned during the course.

Upper Division or Graduate Courses

**CS 3010 COMPUTING DEVICES AND SYSTEMS (4-0).**

Primarily designed for non-computer science majors, this course examines the basic elements of computer systems through a hier-

archy of five levels: the digital logic or device level, the microprogramming machine level, the conventional machine, the operating system machine level, and the assembly language machine level. Although emphasis is on computer hardware, the logical equivalence of hardware and software is demonstrated by examples and trade-offs of both software and hardware implementation of basic functions. **PREREQUISITE:** A structured programming course or consent of instructor.

### **CS 3020 SOFTWARE DESIGN (3-2).**

This course provides the student with a broad background in the concept, design, implementation and testing of computer programs. The topics covered include identification of program requirements, language selection, design methodology, program efficiency, test and debug practices, and documentation techniques. The laboratory periods are used to develop the design of a software project from its "concept" stage through its implementation. **PREREQUISITES:** A structured programming course in a high level language and CS 3010.

### **CS 3030 PRINCIPLES OF OPERATING SYSTEMS (4-0).**

This course provides a broad overview of operating systems including memory management techniques, job scheduling, processor scheduling, device management, and data (information) management techniques. Studies are also included to illustrate issues in manager-operating system interfaces, operating system selection, data control and security, and operating systems utility support. Future trends in computers are discussed. **PREREQUISITE:** CS 3010 or consent of instructor.

### **CS 3111 PRINCIPLES OF PROGRAMMING LANGUAGES (4-0).**

This course is an introduction to the design, evaluation, and implementation of programming languages. The four themes of name,

data, control, and syntactic structuring are traced through the five major programming language generations. Principles for the evaluation of languages are developed and investigated. Key implementation concepts are covered, including interpreters and runtime organization. **PREREQUISITE:** CS 2450 or CS 2970 or consent of instructor.

### **CS 3113 INTRODUCTION TO COMPILER WRITING (3-2).**

This course is intended to explore the basics of modern compiler design and construction techniques. The fundamentals of scanning, parsing, and compiler semantics are developed in the framework of modern compiler-compiler and translator-writing systems technology. The laboratory periods will be used to develop a small model compiler/assembler. **PREREQUISITES:** CS 3111 and CS 3300 or consent of instructor.

### **CS 3200 INTRODUCTION TO COMPUTER ARCHITECTURE (3-2).**

This course examines the organization of computer and processor architectures from the digital logic level through assembly language. An overview of hardware components including processors, memories, and I/O is followed by an in-depth treatment of the following virtual machine levels: digital logic, microprogramming, machine language, operating system, and assembly language. This is a "hands on" course including laboratory projects in each virtual machine level. **PREREQUISITES:** CS 2970 and either EC 2810 or equivalent.

### **CS 3300 DATA STRUCTURES (3-1).**

The course deals with the specification, implementation and analysis of data structures. Common data objects such as strings, arrays, records, linear lists and trees, together with the operations used to manipulate these objects are studied. Particular emphasis is placed on linked structures and

recursion. Applications to memory management, compiler design and sorting/searching algorithms are discussed. Computer projects in ADA are required. PREREQUISITE: CS 2970 or consent of instructor.

**CS 3310 ARTIFICIAL INTELLIGENCE (4-0).**

Survey of topics and methods of Artificial Intelligence. Methods include rule-based systems, heuristic search and exploitation of natural constraints, means-ends analysis, semantic networks, and frames. Emphasis is placed on solving problems that seem to require intelligence rather than attempting to simulate or study natural intelligence. Projects to illustrate basic concepts are assigned. PREREQUISITE: MA 0125 or MA 2025 or consent of instructor.

**CS 3320 DATABASE SYSTEMS (3-1).**

This course presents an up-to-date introduction to database systems including database system architectures, physical storage organization, data models, data languages, and design of databases. PREREQUISITE: CS 3300 or consent of instructor.

**CS 3450 SYSTEMS SOFTWARE DESIGN (3-1).**

The course covers the design and implementation of systems software elements, including assemblers, loaders, input/output control sub-systems, and interpreters. PREREQUISITES: CS 3200, CS 3300 and CS 3111 or consent of instructor.

**CS 3460 SOFTWARE METHODOLOGY (3-1).**

Introduction to the software life cycle. Methods for requirements definition, design, and testing of software. Basic concepts of software engineering, including stepwise refinement, decomposition, information hiding, debugging, and testing. PREREQUISITES: CS 3111 and CS 3300.

**CS 3502 DATA & COMPUTER NETWORKS (4-0).**

An introduction to the structure and architecture of computer networks. The physical, data link and network layers of the ISO model are covered, as well as some aspects of the higher layers. Several important communication protocols are studied, including the currently used models for their specification and analysis. Local Area Networks, such as Ethernet and Token Ring, are also covered. Term papers and/or projects are an important aspect of this course. PREREQUISITE: CS 3200 or CS 3010.

**CS 3550 COMPUTERS IN COMBAT SYSTEMS (3-2).**

This course describes the functions and the algorithms of combat systems, human interaction, and systems organization in terms of processes. The laboratory component of the course allows students hands-on experience with the algorithms and input/output devices. Included are navigational, tracking and ballistics functions, display control, and the use of wakeup and block primitives in process control. PREREQUISITES: CS 2970 and CS 3200 or equivalent.

**CS 3601 THEORY OF FORMAL LANGUAGES AND AUTOMATA (4-0).**

This course will cover the Chomsky hierarchy of formal languages (regular sets, context-free languages, context-sensitive languages, and recursively enumerable languages) and the types of grammars and automata associated with each class in the hierarchy. Emphasis is placed on the major results of the theory as they relate to language and compiler design. In addition, the major results involving the concept of undecidability are covered. PREREQUISITES: MA 2025 and MA 3026 or equivalent.

**CS 3650 DESIGN AND ANALYSIS OF ALGORITHMS (4-0).**

This course focuses on the design and analysis of efficient algorithms. Techniques for analyzing algorithms in order to measure their efficiency are presented. Control structure abstractions, such as divide and conquer, greedy, dynamic programming, back-track (branch and bound), and local search methods, are studied. The theory of completeness is presented along with current approaches to NP-hard problems. PREREQUISITES: CS 3300 and CS 3601.

**CS 3800 DIRECTED STUDY IN COMPUTER SCIENCE (0-2 to 0-8).**

Individual research and study by the student under the supervision of a member of the faculty. This course is intended primarily to permit interested students to pursue in depth subjects not fully covered in formal class work. PREREQUISITE: Consent of instructor. Graded on Pass/Fail basis only.

**CS 3920 TOPICS IN COMPUTER SCIENCE (2-4 to 4-1).**

Designed to support subject matter of special interest, dependent upon faculty availability. Topics will either be drawn from areas not covered by core courses, or be focused treatments of subjects of limited scope. This course may be lecture or lab oriented, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic.

## Graduate Courses

**CS 4112 OPERATING SYSTEMS (4-0).**

An in-depth theoretical treatment of operating systems concepts. Major course topics include process synchronization using semaphores, critical regions, and rendezvous, virtual memory including demand paging and segmentation, dynamic linking and loading, file structures and information security. The

producer-consumer problem, readers and writers problem, and the dining philosophers problem are examined. Architectural and language implications of evolving operating systems are considered. PREREQUISITE: CS 3450 or consent of the instructor.

**CS 4113 ADVANCED LANGUAGE TOPICS (4-0).**

This course covers advanced topics and recent developments in programming languages and compilers. Typical topics are functional programming, object-oriented programming and logic programming. Both theory and practice are covered. PREREQUISITES: CS 3111 and CS 3450 or consent of the instructor.

**CS 4150 PROGRAMMING TOOLS AND ENVIRONMENTS (4-0).**

This course covers the design and implementation of tools to aid software development, including syntax directed editors, version-control systems, language oriented debuggers, symbolic execution vehicles, programming databases, type checkers, macroprocessors and automatic programming tools. These topics are discussed in the context of an integrated, language-oriented programming environment. PREREQUISITES: CS 3450 and CS 4113 or consent of instructor. CS 4113 may be taken concurrently with this course.

**CS 4202 COMPUTER GRAPHICS (3-2).**

An introduction to the principles of the hardware and the software used in the production of computer generated images. The focus of the course is a major design project utilizing the departmental computer graphics and image processing facilities. The course is intended for students proficient in the development of software systems. PREREQUISITES: CS 2970, CS 3200, CS 3300 or consent of the instructor.

**CS 4203 INTERACTIVE COMPUTATION SYSTEMS (3-2).**

This course studies the principles of human-computer interfaces and their implementation techniques. Several different interfaces are covered with an emphasis on the direct manipulation interface. The principles discussed in the course will be illustrated with several commercial software systems. The main focus of the course is a design project of building a simple application software system that supports human-computer interface principles. **PREREQUISITES:** CS 3111 and CS 3300 or consent of instructor.

**CS 4310 ADVANCED ARTIFICIAL INTELLIGENCE (4-0).**

Artificial Intelligence has seen a rapid growth in applications in recent years. This course will survey a wide variety of current research, using a seminar format. Application areas surveyed include planning, language understanding, vision, robotics, human tutoring, database design, and statistics. **PREREQUISITE:** CS 3310 or consent of instructor.

**CS 4311 EXPERT SYSTEMS (3-1).**

This course covers the design and implementation of expert systems. Topics include acquiring, representing, and organizing knowledge, multiple levels of problem structure and domain knowledge, metaknowledge, and multilevel control structures. These topics will be studied in the context of several problem-solving, signal understanding, and machine-learning tasks. **PREREQUISITE:** CS 3310 or consent of the instructor.

**CS 4312 ADVANCED DATABASE SYSTEMS (3-1).**

This course is a sequel to CS 3320, Database Systems. The course will provide an in-depth coverage of relational database

theory, distributed database systems, semantic data models, query processing and optimization, logic and databases, and other advanced topics. Many topics will be illustrated using both commercial and prototype database systems. **PREREQUISITE:** CS 3320 or consent of instructor.

**CS 4313 ADVANCED ROBOTIC SYSTEMS (4-0).**

This course is concerned with the kinematics, dynamics, and control of robotic systems. These systems will be studied primarily by means of computer simulations using graphics workstations. In addition to basic principles, the course will consider specific examples including instances of mobile robots as well as fixed-base (industrial) robots. Robot intelligence and task planning will be emphasized rather than lower-level implementation details. The use of LISP as a simulation language will be central to the course. **PREREQUISITE:** CS 3310 or consent of instructor. In addition, a basic understanding of calculus and matrix algebra is essential to this course.

**CS 4314 COMPUTERS FOR ARTIFICIAL INTELLIGENCE (4-0).**

This course is concerned with computer systems designed to achieve high efficiency with respect to artificial intelligence applications. The course will be conducted in a seminar format, with the specific systems studied in any given quarter being determined by student and faculty interests. Examples of the types of computers to be considered include: Lisp machines, Prolog machines, image processors, vision computers, etc. In general, an effort will be made to investigate the organization and performance of complete systems including both hardware and software aspects. **PREREQUISITE:** CS 3310 or consent of instructor.

**CS 4322 ADVANCED DATABASE SYSTEMS SEMINAR (3-1).**

This course covers the advanced and current research on database topics that have not been discussed fully in the prior database courses CS 3320 and CS 4312. Possible topics to be discussed in the course include database machines (especially multilingual and multibackend systems), multimedia DBMS, semantic modeling, DB security, knowledge-based DBMS, nonnormalized relations, temporal information handling, advanced data structures, real-time database systems, etc. The studies may be theoretical, pragmatic and analytical, or experimental using some advanced prototype database systems. PREREQUISITE: CS 3320 or CS 4312, or consent of instructor.

**CS 4450 COMPUTER ARCHITECTURE (4-0).**

This course covers advanced topics in computer architecture and the application of concepts in computer architecture to the design and use of computers. The topics discussed include classes of computer architecture, application oriented architecture and high performance architecture. PREREQUISITE: CS 3200 or equivalent.

**CS 4451 DESIGN AND ANALYSIS OF MULTIPLE-PROCESSOR REAL-TIME COMPUTERS (3-1).**

This course covers computer architectures ranging from single instruction stream to multiple data stream architectures. Processing capacities of vector processors, array processors, multiprocessors and massively parallel processors are compared to each other in various real time applications. Parallel processing software issues ranging from parallel processing languages to operating systems support issues are considered. Reliability, availability and survivability of systems are also considered. PREREQUISITES: CS 3200, and CS 3450 or consent of instructor.

**CS 4470 ADVANCED COMPUTER GRAPHICS TOPICS (3-2).**

This course covers advanced topics in computer image generation. The topics discussed include quality and realism in computer images, advanced real-time interactive systems, and special architectures for the real-time generation and display of computer images. PREREQUISITES: CS 4202 and consent of instructor.

**CS 4500 SOFTWARE ENGINEERING (3-1).**

The techniques for the specification, design, testing, maintenance and management of large software systems. Specific topics include software life cycle planning, cost estimation, requirements definition and specification, design, testing and verification, maintenance and reusability. The laboratory sessions will discuss special topics. PREREQUISITE: CS 3460 or consent of instructor.

**CS 4520 ADVANCED SOFTWARE ENGINEERING (3-0).**

This course is a sequel to CS 4500. The methods for specifying, designing, and verifying software systems are covered in depth, with emphasis on automatable techniques and their mathematical basis. The techniques are applied to construct and check ADA programs using a formal specification language. The course concludes with a summary of current research areas in software engineering. PREREQUISITE: CS 4500 or consent of instructor.

**CS 4530 SOFTWARE ENGINEERING IN ADA (3-0).**

This course is a sequel to CS 4500. The study of software engineering in ADA represents a tremendous opportunity for improvement in the clarity, reliability, efficiency, and maintainability of software systems. Special features of designing large, real-time,

embedded computer systems, automated tools in the ADA environment, and many applications of the principles in software engineering will be illustrated through the systematic study of the ADA language. **PREREQUISITE:** CS 4500 or consent of instructor.

**CS 4550 DISTRIBUTED COMPUTING (4-0).**

This course covers computer systems that have multiple computers connected by communication links. The primary emphasis is on the interconnection of local area networks to form wide area internetworks. The key aspects of these systems include performance, reliability, routing, protocol demultiplexing, the client-server paradigm and name resolution. **PREREQUISITES:** CS 3450 and CS 3502 (CS 4112 will be helpful as a prerequisite, or corequisite).

**CS 4601 COMPUTER SECURITY (4-0).**

This course is concerned with fundamental principles of computer security. It covers privacy concerns, secrecy issues, operational security, physical security, hardware security, software security, communications security, and data security. There is a special emphasis on multilevel security and access control in computer systems. **PREREQUISITES:** For CS majors, CS 3200, CS 3450, CS 3460, CS 3320, and CS 3502; for CSM majors, CS 3010, CS 3020, CS 3030, and IS 3502.

**CS 4800 DIRECTED STUDY IN ADVANCED COMPUTER SCIENCE (0-2 to 0-8).**

Directed advanced study in computer science on a subject of mutual interest to student and faculty member. Intended primarily

to permit students to pursue in-depth subjects not fully covered in formal class work or thesis research. May be repeated for credit with a different topic. **PREREQUISITE:** Consent of instructor. Graded on Pass/Fail basis only.

**CS 4900 RESEARCH SEMINAR IN COMPUTER SCIENCE (0-2).**

This course will examine the current and planned research of Computer Science faculty and Ph. D. students in multiple fields of study. The course is designed to support Computer Science students in their fourth quarter of study in the selection of an area/topic for thesis research. **PREREQUISITE:** Computer Science students in fourth quarter or consent of Department Chairman. Graded Pass/Fail basis only.

**CS 4910 ADVANCED READINGS IN COMPUTER SCIENCE (0-2 to 0-8).**

Directed readings in computer science on a subject of mutual interest to student and faculty member. The course allows in-depth study of advanced topics not fully covered in formal class work or thesis research. May be repeated for credit with a different topic. **PREREQUISITE:** Consent of instructor.

**CS 4920 ADVANCED TOPICS IN COMPUTER SCIENCE (2-4 to 4-1).**

Designed to support advanced subject matter of special interest, dependent upon faculty availability. Topics will be drawn from areas not covered by other advanced courses, or be focused treatments of subjects of limited scope. This course may be lecture or lab oriented, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic.

**DEPARTMENT OF  
ELECTRICAL AND COMPUTER ENGINEERING**

**John P. Powers**, Chairman and Professor (1970)\*; PhD, University of California at Santa Barbara, 1970.

**Richard W. Adler**, Adjunct Professor (1970); PhD, Pennsylvania State University.

**Harry A. Atwater**, Adjunct Professor (1986); PhD, Harvard University, 1956.

**James K. Breakall**, Associate Professor (1988); PhD, Case Western Reserve University, 1983.

**Jeffrey B. Burl**, Assistant Professor (1987); PhD, University of California at Irvine, 1987.

**Jon T. Butler**, Professor (1987); PhD, Ohio State University, 1973.

**Mitchell L. Cotton**, Associate Professor (1954); EE, University of California at Berkeley, 1954.

**Roberto Cristi**, Associate Professor (1985); PhD, University of Massachusetts, 1983.

**Janine V. England**, Lieutenant, U.S. Navy, Instructor (1987); MS, Naval Postgraduate School, 1987.

**Gerald D. Ewing**, Associate Professor (1963); PhD, Oregon State University, 1964.

**Monique P. Farques**, Assistant Professor (1989); PhD, Virginia Polytechnic Institute and State University, 1988.

**Tri T. Ha**, Professor (1987); PhD, University of Maryland, 1977.

**Scott H. Hershey**, Lieutenant Commander, U.S. Navy, Instructor (1988); MS, Naval Postgraduate School, 1984.

**Ralph Hippenstiel**, Assistant Professor (1986); PhD, New Mexico State University, 1985.

**Ramakrishna Janaswamy**, Assistant Professor (1987); PhD, University of Massachusetts, 1986

**Stephen Jauregui, Jr.**, Adjunct Professor (1971); PhD, Naval Postgraduate School, 1962.

**Jeffrey B. Knorr**, Professor (1970); PhD, Cornell University, 1970.

**Allan Kraus**, Adjunct Professor (1976); PhD, University of South Florida, 1976.

**Chin-Hwa Lee**, Associate Professor (1982); PhD, University of California at Santa Barbara, 1975.

**Hung-Mou Lee**, Associate Professor (1982); PhD, Harvard University, 1981.

**Herschel H. Loomis, Jr.**, Professor (1981); PhD, Massachusetts Institute of Technology, 1963.

**Sherif Michael**, Associate Professor (1983); PhD, University of West Virginia, 1983.

**James H. Miller**, Assistant Professor (1987); ScD, Massachusetts Institute of Technology and Woods Hole Oceanographic Institution, 1987.

**Paul H. Moose**, Associate Professor (1980); PhD, University of Washington, 1970.

**Michael A. Morgan**, Professor (1979); PhD, University of California at Berkeley, 1976.

**Glen A. Myers**, Associate Professor (1965); PhD, Stanford University, 1965.

**Rudolph Panholzer**, Professor (1964); DSc, Technische Hochschule in Graz, Austria, 1961.

**James R. Powell**, Commander, U.S. Navy, Instructor (1989); MS, Naval Postgraduate School, 1984.

**Thomas A. Schwendtner**, Captain, U.S. Air Force, Instructor (1989); MS, University of Colorado, 1989.

**Robert D. Strum**, Professor (1958); MS, University of Santa Clara, 1964.

**Frederick Terman**, Adjunct Professor (1983); MSEE, Stanford University, 1964.

**George J. Thaler**, Distinguished Professor (1951); DEng, Johns Hopkins University, 1947.

**Charles W. Therrien**, Professor (1984); PhD, Massachusetts Institute of Technology, 1969.

**Harold A. Titus**, Professor (1962); PhD, Stanford University, 1962.

**Murali Tummala**, Assistant Professor (1987); PhD, India Institute of Technology, 1984.

**Donald van Z. Wadsworth**, Adjunct Professor (1988); PhD, Massachusetts Institute of Technology, 1958.

**Chyan Yang**, Assistant Professor (1987); PhD, University of Washington, 1987.

**Lawrence J. Ziomek**, Associate Professor (1982); PhD, Pennsylvania State University, 1981.

*\*The year of joining the Postgraduate School Faculty is indicated in parentheses.*

---

**Chairman:**

John P. Powers, Professor,  
Code 62, Spanagel Hall, Room 437,  
(408) 646-2081, AV 878-2081.

**Associate Chairmen:**

**Instruction:**

Robert D. Strum, Professor,  
Code 62St, Spanagel Hall, Rm. 433B,  
(408) 646-3451, AV 878-3451.

**Research:**

Michael A. Morgan, Professor,  
Code 62Mo, Spanagel Hall, Rm. 410,  
(408) 646-2677, AV 878-2677.

**Student Programs:**

Paul H. Moose, Associate Professor,  
Code 62Me, Spanagel Hall,  
Room 206A,  
(408) 646-5039, AV 878-5039.

The Department of Electrical and Computer Engineering is the major contributor to programs for the education of officers in the Electronic Sys-

tems Engineering Curriculum, the Communications Engineering Curriculum, and the Space Systems Engineering Curriculum. Additionally, the Department offers courses in support of other curricula such as Electronic Warfare Systems Technology; Telecommunications Systems Management; Command, Control and Communications, Space Systems Operations; Weapons Engineering; Underwater Acoustics, and Engineering Acoustics.

The Department offers programs leading to the Master of Science degree in Electrical Engineering (MSEE), the degree of Electrical Engineer (EE) and Doctor of Philosophy (PhD). The School typically graduates 80-90 MSEE degree candidates, 5 Electrical Engineer degree recipients, and 1 PhD per year.

A typical MSEE student will spend six to twelve months learning or reviewing material at a junior or senior level before entering into graduate

studies. The graduate study portion of a typical program is about one year in duration with a combination of course study and thesis work being performed. The thesis portion of the study is the equivalent of four courses with an acceptable written thesis being a requirement for graduation.

The curriculum is organized to provide the students with coursework spanning the breadth of Electrical and Computer Engineering. Students are required to take at least one graduate level course in random processes, applications of random processes, and mathematics. In addition to these requirements students concentrate in one major area of Electrical and Computer Engineering by taking a planned sequence of advanced courses. Currently there are formal concentrations in:

- Communications Systems
- Computer Systems
- Guidance, Navigation and Control Systems
- Electromagnetic Systems
- Signal Processing Systems

The program leading to the MSEE is accredited as an Electrical Engineering Program at the advanced level by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

The Department has about forty faculty members either on a permanent or visiting basis contributing to the instructional and research programs.

### **MASTER OF SCIENCE IN ELECTRICAL ENGINEERING**

A Bachelor of Science in Electrical Engineering or its equivalent is required. Credits earned at the Naval Postgraduate School and credits from the validation of appropriate courses at other institutions are combined to achieve the degree equivalence.

To complete the course requirements for the Master's Degree, a student needs a minimum of 36 credits in the

course sequence 3000 - 4999 of which at least 27 credits must be in Electrical and Computer Engineering. Specific courses may be required by the Department and at least four courses, that total a minimum of 12 credits, must be in the course sequence 4000 - 4999.

An acceptable thesis must be presented and approved by the Department.

### **MASTER OF SCIENCE IN ENGINEERING SCIENCE**

Students with acceptable academic backgrounds may enter a program leading to the degree Master of Science in Engineering Science. The program of each student seeking this degree is to include at least 36 credit hours in the course sequence 3000 - 4000 in the disciplines of engineering, science, and mathematics. At least 12 of these 36 hours must be at the 4000 level, and at least 20 hours are to be in electrical engineering courses. A minimum of 8 quarter hours in 4000-level electrical engineering courses and at least 12 credit hours in courses outside of the Electrical and Computer Engineering Department are required. All students must submit an acceptable thesis. This program provides depth and diversity through specially arranged course sequences to meet the needs of the Navy and the interests of the individual. The Department Chairman's approval is required for all programs leading to this degree.

### **ELECTRICAL ENGINEER**

Students with strong academic backgrounds may enter a program leading to the degree Electrical Engineer.

A minimum of 72 graduate course credits is required for the award of the Engineer's Degree of which at least 54 credits must be in Electrical and Computer Engineering.

Of these at least 36 hours are to be in courses in the sequence 4000 - 4999. An acceptable thesis must be completed. Approval of all programs must be obtained from the Chairman of the Department of Electrical and Computer Engineering.

## DOCTOR OF PHILOSOPHY

The Department of Electrical and Computer Engineering has an active program leading to the degree of Doctor of Philosophy. Joint programs with other departments are possible. A noteworthy feature of these programs is that the student's research may be conducted away from the Naval Postgraduate School in a cooperating laboratory or other installation of the Federal Government. The degree requirements are as outlined under the general school requirements for the Doctor's degree.

## LABORATORIES

The laboratories of the department serve the dual role of supporting the instructional and research activities of the department. The department has well-developed laboratories in each area of specialty.

The Controls Laboratory is primarily an instructional laboratory, supporting experiments in simulation and in hardware manipulation. The Circuits/Electronics Laboratory is also an instructional laboratory supporting courses in circuit analysis and design as well as electronic devices and applications.

The Digital Systems Laboratory supports both instruction and research. The laboratory is equipped with microprocessor development systems including a HP64000 for advanced course work and thesis research. CAD facilities are capable of schematic capture, circuit simulation, and fault detection. Major systems in the Computer Laboratory include a VAX 11/758 and a number of intelligent workstations with interactive color graphics and image processing systems. A department-wide Ethernet system will provide resource-sharing and will integrate these systems with office and laboratory microcomputers.

The VLSI Laboratory supports work in system design using integrated circuits and design of custom integrated circuits. Color graphic displays are used for layout of N-channel MOS

(Metal-Oxide-Semiconductor) (NMOS) and Complementary MOS (CMOS) circuits.

The Optical Electronics Laboratory supports both research and courses in the areas of optics that use electronics. The laboratory has low and medium power lasers including CO lasers, an argon ion laser, a dye laser, a Nd:YAG laser and a variety of HeNe and diode lasers. A variety of detectors and imaging equipment is also available.

The Radar and EW Laboratories support courses and thesis work. Working radar systems and EW systems have been modified to allow student access to the signal processing portions of the equipment.

The purpose of the Space Systems Laboratory is to provide the instrumentation, computer software and systems necessary to support instructional activities and research related to spacecraft and space systems. This is a relatively new laboratory which currently has a DOMSAT earth terminal and a TRANSIT navigation satellite receive installed.

The Microwave Laboratory provides materials, devices, components, instrumentation, computer software and systems to support instructional activities and research in the frequency range from 100 MHz to 300 GHz.

The Transient Electromagnetic Laboratory supports research related to radar target classification based on broadband high-resolution coherent backscattering.

Other support facilities within the department include the Production Laboratory for the prototyping, layout and production of printed circuit boards, the Calibration and Instrument Repair Laboratory, as well as the Supply and Issue Facility for the ordering of instrumentation and electronic components.

## DEPARTMENTAL COURSE OFFERINGS COURSES FOR ENGINEERING AND SCIENCE CURRICULA

**EC0810 THESIS RESEARCH (0-0).**

Every student conducting thesis research will enroll in this course.

**EC0950 SEMINAR (NO CREDIT) (0-1).**

Lectures on subjects of current interest will be presented by invited guests from other universities, government laboratories, and from industry, as well as by faculty members of the Naval Postgraduate School.

## Upper Division Courses

**EC2100 CIRCUIT ANALYSIS I (3-2)**

An introductory course for students with little or no electrical engineering background. The fundamental concepts of voltage, current, power, signals, and sources are developed and applied to the analysis of purely resistive circuits, as well as capacitive and inductive circuits. The principle of superposition, the one-port equivalents due to Thevenin and Norton, and the source transformation theorem are introduced. The natural and step responses of simple R-C and R-L circuits are studied. **PREREQUISITES:** Linear algebra and calculus (may be concurrent).

**EC2110 CIRCUIT ANALYSIS II (3-2).**

Dynamic circuits are analyzed in the sinusoidal steady-state using phasor methods. Frequency response, filtering, and ac power are discussed. The Laplace transform and its application to circuit analysis are presented. Network functions and other s-domain concepts are developed. Operational amplifier applications are introduced. **PREREQUISITE:** EC 2100.

**EC2150 REVIEW OF CIRCUIT ANALYSIS (4-2).**

A review of circuit analysis for students with a moderate background in electrical engineering. Starting from a review of the basic concepts of current, voltage, power, signals, and sources, the methods of dynam-

ic circuit analysis are developed through the real and complex frequency domains. Network functions, frequency response, and ac power are included, as are the more common circuit theorems. **PREREQUISITE:** Some background in circuit analysis.

**EC2170 INTRODUCTION TO ELECTRICAL ENGINEERING (4-2).**

An introductory course intended for students not majoring in electrical engineering. Circuit elements, signals and waveforms; power and energy; Kirchhoff's laws and resistive circuits; diode circuit applications; application of Laplace transform to the step and sinusoidal response of dynamic networks. **PREREQUISITES:** Linear algebra and calculus (may be concurrent).

**EC2200 ELECTRONICS ENGINEERING I (3-3).**

An introduction to electronic devices and circuits. Electronic properties and charge-flow mechanisms of crystalline semiconductor material; properties of p-n junctions in diodes and bipolar junction transistors; static and dynamic models for these devices; applications of diodes and the design of wave shaping circuits and power supplies; application of transistors in the design of amplifiers and digital systems; characteristics, fabrication and the design of integrated circuits. **PREREQUISITE:** A first course in electrical engineering.

**EC2210 ELECTRONICS ENGINEERING II (3-2).**

Characteristics of Field Effect Transistors (FET) including MOS and CMOS transistors and their theory of operation. Application of FET in the design of discrete amplifiers and biasing considerations. Frequency response considerations for the design of discrete device amplifiers. Application and design of feed-back amplifiers and operational amplifiers. **PREREQUISITE:** EC 2200.

**EC2220 DESIGN OF ELECTRONIC CIRCUITS (2-4).**

A project course covering the design and applications of analog and digital integrated circuits (ICs). Includes an introductory overview of important communications ICs and practical experimental design, construction, and testing of circuits and systems using these devices. **PREREQUISITES:** EC2210 and EC2500.

**EC2250 ACCELERATED REVIEW OF ELECTRONICS ENGINEERING (4-2).**

An advanced review of semiconductor devices and circuits intended for students who have previously studied the subject matter of EC2200 and EC2210. **PREREQUISITE:** Sufficient background in electronic circuits. Graded on Pass/Fail basis only.

**EC2300 CONTROL SYSTEMS (3-2).**

The application of feedback principles to the design of linear control systems using frequency domain (Bode-Nichols), s-domain (root locus) and state variable methods. Performance criteria including steady-state accuracy, transient response specifications, bandwidth and integral performance indices are presented. Laboratory work includes testing and evaluation of physical systems and design studies. **PREREQUISITE:** EC 2420.

**EC2400 DISCRETE SIGNALS AND SYSTEMS (3-0).**

Principles of discrete systems, including modeling, analysis, and design. Topics include differential equations, convolution, stability, z-transforms, system diagrams and realizations, state equations, and frequency response. Simple digital filters are designed and evaluated. **PREREQUISITE:** FORTRAN or other high level language.

**PEC2410 FOURIER ANALYSIS OF SIGNALS AND SYSTEMS (3-0).**

Analysis of analog signals in the time and frequency domains; properties and applications of Fourier series and transform; convolution and correlation. Introduction to modulation and sampling of analog signals. **PREREQUISITES:** Differential equations and EC 2110 (or equivalent).

**EC2420 LINEAR SYSTEMS (3-0).**

Formulation of system models including state equations, transfer functions, and system diagrams for continuous and sampled-data systems. Computer and analytical solution of system equations. Stability, controllability, and observability are defined. Introduction to design by pole placement using state feedback. **PREREQUISITES:** Laplace transform, differential equations, linear algebra, and FORTRAN or other high level language.

**EC2450 ACCELERATED REVIEW OF LINEAR SYSTEMS (4-2).**

An advanced review of continuous and discrete system theory intended for students who have previous education in these areas. Topics covered by each student will depend upon background and competence in the subject matter of EC 2400, EC 2410 and EC 2420. Some parts of the course will be in the self study mode. **PREREQUISITE:** Sufficient background in linear systems theory. Graded on Pass/Fail basis only (Parts of this course may be taken through Continuing Education mini courses (EE 2151-55))

**EC2500 COMMUNICATIONS THEORY (3-2).**

In this first course on the electrical transmission of signals, the following concepts are formulated mathematically and then considered in terms of devices and systems: sampling; pulse amplitude, position and

width modulation; pulse code modulation; amplitude, phase, and frequency modulation and demodulation with analog and digital messages; time and frequency multiplexing. **PREREQUISITE:** EC 2410

### **EC2600 INTRODUCTION TO FIELDS AND WAVES (4-0).**

Static field theory is developed from physical and mathematical principles. Time-varying Maxwell equations are introduced and solutions to the wave equations are presented. Additional topics include boundary value problem solutions, plane wave propagation in vacuum and materials. **PREREQUISITE:** Vector calculus.

### **EC2610 ELECTROMAGNETIC ENGINEERING (3-1).**

A continuation of 2600. Topics include the analysis and design of transmission lines, waveguides, resonators, and high frequency components. Applications are presented in the laboratory. **PREREQUISITE:** EC 2600.

### **EC2650 ACCELERATED REVIEW OF ELECTROMAGNETICS (4-2).**

A comprehensive review of basic electromagnetic theory intended for students who have previously studied the subject matter of EC 2600 and 2610. **PREREQUISITE:** Sufficient background in electromagnetic theory. Graded on Pass/Fail basis only.

### **EC2800 INTRODUCTION TO MICROPROCESSORS (3-2).**

An introduction to the organization and operation of microprocessors and microcomputers. Topics include: the instruction set, addressing methods, data types and number systems, stack and register organization, exception processing, assembly language programming techniques including macros, assembly language implementation of typical control structures, data structures, and subroutine linkage methods. Laboratory sessions teach a systematic method for pro-

gram design and implementation. The laboratory assignments consist of a series of programs which collectively implement a major software project. **PREREQUISITES:** A high level language and EC 2820 (may be concurrent).

### **EC2810 DIGITAL MACHINES (3-2).**

An introductory course in the analysis of digital systems and computers. No previous background in electrical engineering or digital techniques is assumed. Topics include: Number systems, logic gates and logic design; arithmetic circuits; flip-flops, counters, registers, and memories; basic digital computer architecture and the internal operation of computers; and elementary machine-language programming. The laboratories are devoted to the study of logic elements, arithmetic circuits, flip-flops, registers, and counters.

### **EC2820 DIGITAL LOGIC CIRCUITS (3-2).**

An introductory course in the analysis and design of digital circuits. No previous background in digital concepts or electrical engineering is assumed. Topics include: Boolean algebra, truth tables, logic gates, integrated circuit families, decoders, multiplexers, arithmetic circuits, PLAs, ROMs, design of combinational circuits using SSI and MSI components, sequential logic including latches, flip-flops, registers, counters, and memories, analysis and design of synchronous circuits using state tables and state diagrams. The laboratories are devoted to the study of combination and sequential circuits and include a sequence of design projects involving increasingly complex digital functions.

### **EC2890 DIGITAL CIRCUIT DESIGN LABORATORY (0-6).**

A laboratory course in the design of digital circuits. Several projects will be completed

involving design with MSI components and hardware and software control of external events with a microprocessor. Students are free to choose their projects according to their interests. **PREREQUISITE:** EC 2800.

### **EC2990 DESIGN PROJECTS IN ELECTRICAL ENGINEERING (2-4).**

Design projects under the supervision of faculty members. Individual or team projects involving the design of devices or systems. A written report is required. **PREREQUISITE:** Consent of instructor. Graded on Pass/Fail basis only.

#### Upper Division or Graduate Courses

### **EC3210 INTRODUCTION TO ELECTRO-OPTICAL ENGINEERING (3-1).**

An overview of the elements that comprise current electro-optical and infrared (EO/IR) systems. Topics include radiation sources (both laser and thermal), detector devices, modulators, optical elements, and propagation characteristics. Examples of various simple EO/IR systems are discussed. **PREREQUISITE:** EC 2210 (may be concurrent).

### **EC3270 POWER ELECTRONICS (4-0).**

An introduction to the theory and application of low-power analog and digital devices used in the control of electric power systems found in Shipboard Systems. Applications of power electronics with emphasis on regulators, inverters and rectifiers. **PREREQUISITES:** EC 3370 and differential equations.

### **EC3310 LINEAR OPTIMAL ESTIMATION AND CONTROL (3-1).**

Techniques of optimal control and estimation theory and their application to military systems. Topics include performance measures; dynamic programming, the linear regulator problems; state estimation using observers and Kalman filters; Monte Carlo simulation; combined estimation and control and case studies. **PREREQUISITES:** EC 2300 and EC 3410 or EC 3500 (either may be concurrent with EC 3310).

### **EC3370 ELECTROMECHANICAL ENERGY CONVERSION (3-1).**

Concepts of force and torque developed as results of the interaction of magnetic fields are presented as the common basis for all electromechanical machinery. Fundamental characteristics of DC motors and generators, synchronous machines and induction motors are developed and applied. Transformers and control and distribution circuits are also introduced. **PREREQUISITE:** A course in circuits.

### **EC3400 DIGITAL SIGNAL PROCESSING (3-1).**

The foundations of digital filtering and signal processing are developed. Topics include Discrete Fourier Transforms (DFTs) and the Fast Fourier Transform (FFT) algorithm, circular convolution and correlation, the use of DFTs and FFTs to evaluate convolution and correlation, spectrum analysis, design methods for nonrecursive and recursive digital filters, and signal flow graph and matrix representations. Computer-aided design techniques are emphasized. **PREREQUISITES:** EC 2400 and EC 2410.

### **EC3410 DISCRETE-TIME RANDOM PROCESSES (4-0).**

Fundamentals of discrete-time random processes are developed from a probabilistic and statistical point of view for digital signal processing, control, and communications. Topics covered are random vectors and description of discrete-time random signals, sampling of continuous time random signals, statistical averages and second moment analysis, linear transformations, and fundamentals of estimation theory. Subject matter includes optimal (Weiner) filtering, and an introduction to linear prediction and recursive (Kalman) filtering. **PREREQUISITES:** EC 3400 (may be concurrent) and OS 2102.

**EC3420 MODERN METHODS OF DIGITAL SIGNAL PROCESSING (3-1).**

Modern methods of signal processing are developed from a data-oriented point of view. Methods are developed for the processing of random signals through statistical data analysis and modeling. Topics include forward and backward linear prediction, autoregressive and moving average signal modeling, lattice structures, and an introduction to classical and modern methods of spectral estimation. **PREREQUISITE:** EC 3410 or consent of instructor.

**EC3440 IMAGE PROCESSING AND RECOGNITION (3-2).**

Subjects introduced in this course include image representation, enhancement, restoration, transformation, and encoding. Pattern recognition using statistical decision theory is discussed briefly. Some analysis involving region segmentation and block world understanding will be introduced. Some effort is directed toward robotic vision where contemporary techniques used to recognize objects and extract depth information are dealt with briefly. There will be a series of experiments using special peripherals and computers. **PREREQUISITE:** EC 3400 (may be concurrent).

**EC3450 ACOUSTIC FIELD THEORY (4-0).**

The objectives of this course are to expose the student to various mathematical techniques (both exact and approximate), special functions (e.g., Bessel functions, Hankel functions, Legendre polynomials, etc.), orthogonality relationships, etc., which will enable him to solve fundamental problems concerning the radiation, scattering and propagation of sound in fluids. Topics to be covered include: general solutions of the three-dimensional Helmholtz wave equation in rectangular, cylindrical, and spherical coordinates with Dirichlet, Neumann, and

Robin boundary conditions; radiation and scattering from cylinders and spheres; sound propagation in the ocean - the WKB approximation, ray acoustics, and the parabolic equation approximation; and other topics as time permits. **PREREQUISITES:** EC 2610 or MA 3132 or consent of instructor.

**EC3500 ANALYSIS OF RANDOM SIGNALS (4-0).**

Fundamental concepts necessary for handling non-deterministic signals and noise in communication, control and signal processing systems are developed. Topics include properties of random time functions, statistical averages, autocorrelation and the power spectral density, transform relations, stationarity and ergodicity, noise models. **PREREQUISITES:** EC 2500 and OS 2102.

**EC3510 COMMUNICATIONS ENGINEERING (3-0).**

The influence of noise and interference on the design and selection of hardware in practical communication transmitters and receivers is analyzed. Specific topics include link and signal-to-noise ratio calculations, receiver noise performance for various modulation schemes, bandwidth tradeoffs, carrier and data synchronization methods, and hardware parameters. **PREREQUISITES:** EC 2220 and EC 3500.

**EC3550 FIBER OPTIC SYSTEMS FUNDAMENTALS (3-1).**

An introduction to the components and to the concepts of designing fiber optic communications systems. Includes fiber properties and parameters, fiber fabrication and testing, LED and injection laser sources, pin photodiodes and avalanche photodiode detectors, receiver design considerations, connector and splice techniques, and system design incorporating analysis and tradeoffs. Data distribution techniques are also studied. **PREREQUISITES:** EC 2220 and EC 2600.

**EC3600 ELECTROMAGNETIC RADIATION, SCATTERING AND PROPAGATION (3-2).**

The principles of electromagnetic radiation are applied to antenna engineering, propagation, and scattering. The characteristics of various practical antennae are considered including arrays and reflectors. Scattering concepts are introduced and propagation phenomena are considered. Applications include sidelobe suppression, radar target scattering, HF and satellite communications. **PREREQUISITE:** EC 2610.

**EC3610 MICROWAVE CIRCUITS (3-2).**

A continuation of EC 2610, the course begins with a discussion of circuit media with emphasis on structures used for MICs. A study of scattering parameters and applications follows. This material is then used in the study of reciprocal and non-reciprocal components. Circuits with active devices are treated briefly. Use of CAD techniques is integrated throughout the course. **PREREQUISITE:** EC 2610.

**EC3620 MICROWAVE DEVICES (3-2).**

A continuation of EC 2610, the course covers microwave solid state and electron tube devices. Circuit and system applications are discussed as well as device physics. Use of CAD techniques is integrated throughout the course. **PREREQUISITE:** EC 2610.

**EC 3630 RADIOWAVE PROPAGATION (3-0).**

This course treats the effects of the earth and its atmosphere on electromagnetic waves in the frequency range up to about 300 GHz. Topics covered include ground waves, sky waves, meteor burst, scatter, ducting, reflection, refraction, diffraction, attenuation, and fading. Basic theory is covered and computer models are introduced where appropriate. Emphasis is placed on

determination of the transmission loss between transmitting and receiving antennae. Antenna parameters are covered briefly. **PREREQUISITE:** EC 2610.

**EC3640 ELECTROMAGNETIC ENVIRONMENTAL EFFECTS (3-0).**

A project course covering an introduction to sources of electromagnetic interference and techniques for making electronic systems compatible. Conventional Electromagnetic Compatibility (EMC) methods and concepts are examined for receivers, transmitters, and antennae in communications, signal processing, and radar systems. Newly developed techniques that overcome the shortcomings of classical EMC test procedures and standards are emphasized. **PREREQUISITE:** EC 3600 or EO 3760.

**EC3650 COMPUTATIONAL ELECTROMAGNETIC MODELING TECHNIQUES (2-2).**

Performance predictions for antennae in military systems operating below microwave frequencies are nearly impossible using conventional analytical methods. Recent advances in computers and computational electromagnetics permit efficient numerical analysis of electromagnetic radiating systems. This course introduces students to the methods of moments and finite element techniques developed for military antennae applications. Several EM modeling codes are demonstrated and used to solve typical Navy and Marine Corps antenna problems. Intended for students pursuing research in applied electromagnetics. **PREREQUISITE:** EC 3600 or EO 3760.

**EC3670 PRINCIPLES OF RADAR SYSTEMS (4-2).**

For students in the Avionics and Weapons curricula. Topics include microwave devices, microwave propagation, antenna fundamentals, electronically steerable

arrays, pulse radar basics, detection of signals in noise, the radar equation, CW, pulse doppler, moving-target indicators, pulse compression, the ambiguity function, tracking radars, conical scan, track-while-scan, scan with compensation and monopulse. **PREREQUISITES:** Consent of Instructor, U.S. citizenship and SECRET clearance.

### **EC3800 MICROPROCESSOR BASED SYSTEM DESIGN (3-2).**

Advanced microprocessor system concepts are studied. Topics covered are CPU operation and timing, address decoding, typical LSI support chips, exception processing, design of static and dynamic memory systems, worst-case timing analysis, bus arbitration, and direct memory access controllers. The laboratory consists of a design project integrating hardware and software using a state of the art development system. **PREREQUISITES:** EC 2800 and EC 2820.

### **EC3820 COMPUTER SYSTEMS (3-1).**

The course presents a unified approach for the design of computer systems stressing the interacting processes implemented in hardware, software and firmware. General features of operating systems are studied as well as specific features of an existing system. The elements of multiprogramming systems are introduced. **PREREQUISITE:** EC 2800.

### **EC3830 DIGITAL COMPUTER DESIGN METHODOLOGY (3-2).**

A design and project oriented course. Basic principles, theories and techniques for practical design of digital systems. Emphasizes an integrated viewpoint combining essential elements of classical switching theory with a thorough understanding of the versatility of modern integrated circuits. Laboratory introduces modern design aids. **PREREQUISITE:** EC 2820.

### **EC3910, 3920, ..., 3990 TOPICS IN ELECTRICAL AND COMPUTER ENGINEERING (variable credit).**

This course examines topics of current interest in electrical and computer engineering. **PREREQUISITE:** Consent of instructor.

## Graduate Courses

### **EC4000 FUTURE ENGINEERING PRACTICE (3-0).**

You have taken a large number of courses and have learned a great many things; this course is designed to teach you how to organize yourself and your knowledge, not merely to meet current needs, but to prepare you for your future (say the year 2020) when you are in a very responsible position such as Admiral (or General). By then much of what you have just learned will be technologically obsolete, but many of the fundamentals will persist. The course discusses these fundamentals, especially computers including AI, simulations, history so that you can see trends and make some guesses as to your future, but most of all it concentrates on you yourself, your problems in learning new things as technology and your career continue to progress. The course, to some extent, adapts itself to the interests of the students enrolled, but much is a survey of the fundamentals of engineering theory and practice and projections into the future. **PREREQUISITE:** Consent of the instructor. Graded on Pass/Fail basis only.

### **EC4100 ADVANCED NETWORK THEORY (3-1).**

Modern active circuit design topologies; analog and sampled data networks. Analysis of transfer function properties, stabilities, sensitivities and causalities. Higher order filter design and synthesis. Use of computer simulation tools, SPICE, and different device models for network analysis. Transfor-

mation methods and switched capacitor filtering and nonfiltering applications. Introduction to analog VLSI techniques using stray insensitive switched capacitor networks. PREREQUISITES: EC2210 and EC3400.

**EC4210 ELECTRO-OPTIC SYSTEMS ENGINEERING (3-0).**

Advanced topics and application of electro-optics. Military applications of infrared technology. Signal-to-noise analysis of laser detector performance. Student reports on EO/IR topics of current interest. PREREQUISITE: EC 3210.

**EC4300 ADVANCED TOPICS IN MODERN CONTROL THEORY (3-0).**

Advanced topics and current developments in control theory and applications including such subjects as: the calculus of variations and Pontryagin's minimum principle applied to optimal control problems; numerical solution of two-point boundary-value problems; nonlinear estimation techniques; robust design techniques; large-scale systems; system identification; case studies of fire control and ship control systems. PREREQUISITE: Consent of instructor.

**EC4310 DIGITAL CONTROL SYSTEMS (3-0).**

Discrete systems are described and analyzed using time-domain and z-transform methods. Analytical design techniques are studied, as well as the engineering characteristics of computer control systems. PREREQUISITES: EC 2400 and 3310.

**EC4320 DESIGN OF LINEAR CONTROL SYSTEMS (4-0).**

Advanced concepts in the design of linear feedback systems. Frequency response and root locus methods are applied to the design of cascade and feedback compensators for improvement of stability, accuracy and

dynamic response. Parameter plane methods are used to place dominant poles while considering both sensitivity and optimization. SISO and MIMO systems are optimized using function minimization subroutines. PREREQUISITE: EC 2300.

**EC4330 NAVIGATION, MISSILE, AND AVIONICS SYSTEMS (3-2).**

The principles of operation of navigation, missile and avionics systems are presented. Topics are selected from the following areas to address the specific interests of the class: IR, EO, radar, laser, and acoustic sensors; inertial platforms; gyros and accelerometers; Loran, Omega, GPS, guidance, fire control, and tracking systems. PREREQUISITES: EC 3310, U. S. Citizenship and SECRET clearance.

**EC4340 NAVIGATION, MISSILE AND AVIONICS SYSTEMS (3-2).**

This course covers essentially the same material as 4330, but with deletion of detailed analysis of specific systems. This course is intended for officers who do not have U.S. Citizenship. PREREQUISITE: EC 3310.

**EC4350 NONLINEAR SYSTEMS (3-2).**

Analysis and design of nonlinear systems with phase plane and describing function methods. Accuracy, limit cycles, jump resonances, relay servos and discontinuous systems are considered. PREREQUISITE: EC 2300.

**EC4370 MATHEMATICAL MODELS AND SIMULATION FOR CONTROL SYSTEMS (4-0).**

Modeling concepts and techniques for linear and nonlinear systems. Philosophy of model studies. Verification of the model and its parameter. Design studies using computer models. PREREQUISITE: EC 2300.

**EC4400 ADVANCED TOPICS IN SIGNAL PROCESSING (3-0).**

Special advanced topics in signal processing not currently covered in a regularly scheduled course. Topics may include digital filter structures and implementations, advanced computational topics and architectures for signal processing, imaging, recent work in signal modeling, array processing, or other topics of interest. **PREREQUISITE:** EC 3420 or consent of instructor.

**EC4410 SPEECH SIGNAL PROCESSING (3-1).**

This course covers methods of digital signal processing as they are applied to speech. Speech signals by nature are stationary only for short periods of time. The production mechanisms and characteristics of speech signals are discussed. Topics include digital speech modeling, analysis by time-domain and short-time Fourier methods, speech synthesis, linear predictive coding of speech, and an introduction to speech recognition, speaker recognition, verification, and identification. The techniques introduced here have applications in the processing of acoustic signals, transmission line modeling, communications, and other block stationary signals. **PREREQUISITE:** EC 3420 or consent of instructor.

**EC4420 MODERN SPECTRAL ESTIMATION (3-1).**

Classical and modern spectral estimation are developed from their basic ideas and compared in terms of performance and implementation. Topics covered are Fourier-based, model based and eigenspace based estimators, as well as Capon's method and Prony's method. Non-stationary spectral estimation schemes are discussed, in particular the Wigner-Ville Distribution and the instantaneous power spectrum. Array processing is discussed from classical, model-based and eigenspace-based perspectives. Additional topics are cepstral analysis, higher order spectral estimators, and coherency. **PREREQUISITE:** EC 3420 or consent of instructor.

**EC4440 MULTIDIMENSIONAL DIGITAL SIGNAL PROCESSING (3-1).**

Fundamentals of digital signal processing for signals that are a function of two or more independent variables. Analysis in both the time/space and frequency domains. Areas where the theory of one-dimensional signal processing does not extend in any straight forward way to two or more dimensions are highlighted. Topics include convolution, difference equations, recursively computable systems, sampling, regions of support, multidimensional periodicity, Fourier analysis including discrete Fourier transforms, z-transforms, multidimensional stability and causality, and filter design. Application to array processing or other multi-dimensional signal processing areas (topics may vary). **PREREQUISITE:** EC 3400.

**EC4450 SONAR SYSTEMS ENGINEERING (4-1).**

Mathematical development and discussion of fundamental principles that pertain to the design and operation of passive and active sonar systems. Topics from complex aperture theory, array theory, and signal processing are covered. **PREREQUISITES:** EC 3450 or PH 3452 or PH 3402 and EC 3410 or EC 3500 or EO 4720.

**EC4460 PRINCIPLES OF SYSTEMS ENGINEERING (3-0).**

An introduction to the concepts, principles, methodology, and techniques of the design of large scale systems. Lecture topics include the systems approach; the system life cycle and system design process; determining system requirements from operational requirements; system effectiveness, reliability, maintainability, safety, and logistic support considerations; test and evaluation; and cost as a design parameter. Applications to Navy electronics systems are used to illustrate the subjects covered. A detailed case study analysis of a specific Navy system is performed by the students. **PREREQUISITE:** Consent of instructor.

**EC 4470 ADAPTIVE SIGNAL PROCESSING (3-1).**

Introduction to the theory of adaptive signal processing for random sequences. Topics to be covered include: review of Wiener filters; one-step forward linear prediction error filters, one-step backward linear prediction error filters; analysis and synthesis of lattice prediction error filters; adaptive tapped-delay-line filters using steepest descent, least mean squares (LMS), and recursive least squares (RLS) algorithms; and adaptive lattice filters. PREREQUISITE: EC 3410 or consent of instructor.

**EC4480 SIGNALS INTELLIGENCE (SIGINT) SYSTEMS ENGINEERING (2-2).**

Airborne, shipboard, and ground based intercept and direction finding system techniques used against simple and sophisticated electromagnetic radiation systems. Among the topics covered are current state of the art for wideband and directional antennas, wideband RF preamplifiers, scanning and chirping receivers, displays, recorders, pattern recognizers, and signal analysis devices. The laboratory periods are largely devoted to the specification and block diagram of systems to handle specified SIGINT tasks. PREREQUISITES: Consent of instructor; U.S. Citizenship and SECRET clearance.

**EC4500 ADVANCED TOPICS IN COMMUNICATIONS (3-0).**

Advanced topics and current developments in communications including such topics as: m-ary signaling in digital data transmission, packet switching in radio networks, multiple access, computer data links, and error control. PREREQUISITE: Consent of instructor.

**EC4550 DIGITAL COMMUNICATION (4-0).**

This course discusses some of the advantages and limitations of digital communications systems, to include: common modulation formats, matched-filter receivers, probability of error calculations, non-coherent receivers, carrier synchronization, frame and bit synchronization, telephone line modems, inter-symbol interference and adaptive equalizers, wide-band modems, exchange of band-width and signal-to-noise ratio, diversity combining, maximum-likelihood and maximum a posterior probability receivers, and channel capacity and finite rate communication with arbitrarily few errors. PREREQUISITE: EC 3510.

**EC4560 COMMUNICATIONS ECCM (3-2).**

Methods of reducing the effects of jamming on radio communications systems are considered. Matched filter and correlator theory and application to spread spectrum techniques of digital data transmission are treated. Synchronization problems and techniques are presented. Codes for error correction are briefly considered. Frequency hopping, time hopping, and hybrid systems are studied in addition to direct sequence spreading. Use of steerable null antennas is described. PREREQUISITE: EC 3510.

**EC4570 DECISION AND ESTIMATION THEORY (4-0).**

Principles of optimal signal processing techniques for detecting signals in noise are considered. Topics include Maximum-Likelihood, Bayes Risk, Neyman Pearson and Min-Max criteria and calculations of their associated error probabilities (ROC curves) for signals in Gaussian noise. Principles of Maximum-Likelihood, Bayes Cost, MMSE and Maximum-Aposterior estimators are introduced. Asymptotic properties of esti-

mators and the Cramer-Rao bound are developed. The estimator-correlator structure is derived for detection of signals with unknown parameters. This structure is illustrated by development of the radar (sonar) ambiguity function and matched filter processing systems. State estimation and the Kalman filter are derived and related to MMSE estimators. Emphasis is on dual development of continuous time and discrete time approaches, the latter being most suitable for digital signal processing implementations. PREREQUISITE: EC 3410 or EC 3500.

#### **EC4580 INFORMATION THEORY (4-0).**

Concepts of information measure for discrete and continuous signals. Fundamentals theorems relating to coding and channel capacity. Effects of noise on information transmission. Coding methods for error control in digital communications systems. Selected applications of the theory to systems. PREREQUISITE: EC 3410 or EC 3500.

#### **EC4590 COMMUNICATION SATELLITE SYSTEMS ENGINEERING (3-0).**

Communication satellite systems including the satellite and user terminals. Subjects include orbits, power sources, antennas, stabilization, link calculations, multiple access techniques, modulation and demodulation schemes, phase-locked loops, coding, transponder intermodulation and hardlimiting, receiver design, spread spectrum in SATCOM for multiple access, anti-jam and covert communications. PREREQUISITE: EC 3510. (May be concurrent).

#### **EC4600 ADVANCED ELECTROMAGNETIC THEORY (3-0).**

An introduction is provided to advanced mathematical and numerical techniques of importance in the design and analysis of electromagnetic devices. Applications to radar scattering, antennas, propagation and microwave devices are covered. PREREQUISITE: Consent of instructor.

#### **EC4610 RADAR SYSTEMS (3-2).**

The radar range equation is developed in a form including signal integration, the effects of target cross-section, fluctuations, and propagation losses. Modern techniques discussed include pulse compression frequency-modulated radar, MTI, pulse doppler systems, monopulse tracking systems, multiple-unit steerable array radars, and synthetic aperture systems. Laboratory sessions deal with basic pulse radar systems from which the advanced techniques have developed, with pulse compression, and with the measurements of radar cross section of targets. PREREQUISITES: EC 3410 or EC 3500, EC 3600, and one among EC 3610, EC 3620, and EC 3630; U.S. Citizenship and SECRET clearance.

#### **EC4620 RADAR SYSTEMS (3-2).**

This course covers essentially the same material as EC 4610, but with deletions of detailed analysis of specific items. PREREQUISITES: EC 3410 or EC 3500, EC 3600, and one among EC 3610, EC 3620, and EC 3630. This course is intended for students who do not have U.S. Citizenship.

#### **EC4660 HIGH FREQUENCY TECHNIQUES (4-0).**

The high frequency path from transmitter multicoupler to receiver multicouplers. Topics include HF propagation, propagation prediction, sounders, nuclear effects, ionospheric noise and interference, dynamic range problems, antenna and site effects, and target location techniques. PREREQUISITES: EC 3600, or consent of instructor; U.S. Citizenship and SECRET clearance.

**EC4670 ELECTRONIC WARFARE (4-1).**

This course is intended for students who are not in the Electronics or Communications Engineering curricula. Three lecture hours are shared with EC4680. In addition to the topics listed under EC4680, background material on communication theory and digital signal processing is presented. **PREREQUISITES:** EC 3670, U.S. Citizenship and SECRET clearance.

**EC4680 ELECTRONIC WARFARE TECHNIQUES AND SYSTEMS (3-3).**

Active and passive countermeasure techniques are considered, including signal representation, signal analysis, and signal interception. Important parameters of radar and communications systems are defined. Denial and deceptive jamming techniques are considered along with countermeasure and counter-countermeasure techniques. Signal intercept systems are treated. Acoustic, radio-frequency, infrared, and optical countermeasures are discussed. **PREREQUISITES:** EC 4610, U.S. Citizenship and SECRET clearance.

**EC4690 PRINCIPLES OF ELECTRONIC WARFARE (3-2).**

For students who do not have U.S. Citizenship. The objectives are to define EW signals and systems parameters, and establish interrelationships of these parameters for active and passive EW systems. Topics included are signal waveforms and spectra, receivers, signal processing and display, jamming techniques, direction finding, deception and confusion techniques. Laboratory exercises apply the basic principles of jamming and CCM to radar systems. **PREREQUISITE:** EC 4620.

**EC 4800 ADVANCED TOPICS IN COMPUTER ARCHITECTURE (3-0).**

Advanced topics and current developments in computer architecture including such subjects as: RISC vs. CISC; graphics processors and work stations; supercomputers and mini-supercomputers; computer structures for artificial intelligence; massively parallel architectures. **PREREQUISITE:** Consent of instructor.

**EC4820 COMPUTER ARCHITECTURES (3-1).**

A study of advances in computer architecture. Computer descriptive languages. Memory system issues. Mini-computer and bit-slice microcomputers. High performance computers: pipeline supercomputers, array processors, multiprocessors. Data flow architectures. Fault tolerant and military architectures. **PREREQUISITE:** EC 3800 and EC 3820.

**EC4830 DIGITAL COMPUTER DESIGN (3-1).**

A study of the architecture of and the design process for digital computer systems. Topics covered will include instruction set architectures, advanced computer arithmetic, hierarchical design techniques, design of systems using standard and custom VLSI devices, Modern computer aided-design tools are emphasized. Laboratory project is the design of a digital computer. **PREREQUISITES:** EC 3800 and EC 3830.

**EC4850 COMPUTER COMMUNICATION METHODS (3-0).**

The course objective is to develop an understanding of computer communications network design. Coverage includes the essential topics of network topology, connectivity, queuing delay, message throughput and cost analysis. The International Standards Organization (ISO) model is divided into physical link, data link, network, transport,

session and application layers. The protocol of these layers, data framing, error control, flow control, packet assembly/disassemble, routing, congestion, virtual circuit connection are discussed. New lower networking technologies such as Ethernet, ring, satellite link, X.25 public packet switching are introduced. PREREQUISITE: EC 3500.

#### **EC4870 VLSI SYSTEMS DESIGN (3-2).**

An introduction to the architecture and design of very large scale integrated systems. A structured approach to system design is developed emphasizing CMOS devices and circuits. Basic cells, state machines, and their application to highly regular topologies are studied. Several examples of complete VLSI systems are presented. Project work is oriented to the definition, planning, design, and testing of a complete small system. PREREQUISITES: EC 3800 and EC 3830.

#### **EC4900 SPECIAL TOPICS IN ELECTRICAL ENGINEERING (V-0).**

Supervised study in selected areas of electrical engineering to meet the needs of the individual student. A written report is required at the end of the quarter. PREREQUISITE: Consent of the Department Chairman. Graded on Pass/Fail basis only.

#### **EC4910, 4920, ..., 4990 SPECIAL TOPICS IN ELECTRICAL ENGINEERING (variable credit)**

This course examines special topics of current interest in electrical and computer engineering. PREREQUISITE: Consent of instructor.

### **COURSES**

#### **FOR INTERDISCIPLINARY CURRICULA**

##### **Upper Division Courses**

#### **EO2710 INTRODUCTION TO SIGNALS AND SYSTEMS (4-2).**

A first course in communications systems for the C3, Space Systems Operations, and Telecommunications Management curricula.

Coverage begins with the representation of signals in the time and frequency domains and progresses through linear system analysis using Fourier transform theory. Analog modulation techniques are presented emphasizing communications systems level analysis and spectral representation. Topics include Fourier series, Fourier transforms, linear systems, filters, signal bandwidth, communications channels and amplitude, frequency, and phase modulation. PREREQUISITE: MA 1248.

#### **EO2720 INTRODUCTION TO ELECTRONIC SYSTEMS (4-2).**

A first course in electronic systems for the ASW and EW systems curricula. Emphasis is on the functional aspects of basic circuits and signals. Topics include electrical quantities, resistive circuits, inductance and capacitance, operational amplifiers, time and frequency response, rectifiers and logic elements. PREREQUISITE: Calculus.

#### **EO2730 CONTROL SYSTEMS (2-1).**

This course develops the basic tools of the control systems engineer. The applications to electronic warfare are emphasized in the examples and laboratory experiments. The dynamics for a radar control system, a missile seeker head tracking system and missiles are investigated. Basic topics are introduced such as signal flow graphs and system step and frequency response characteristics, and digital systems theory as used in radar tracking and command guided and semiactive homing missiles. PREREQUISITES: Differential equations, Laplace transform and FORTRAN.

#### **EO2750 COMMUNICATIONS SYSTEMS (4-2).**

A second course in communications systems for the C3, Space Operations, and Telecommunications Management curricula. Coverage begins with the sampling theorem and various forms of digital modulation

emphasizing the spectral representation of digital and pulse signals. Noise is introduced with emphasis on its effects on a communication system. Specific topics include sampling, pulse-amplitude modulation, time-division multiplexing, pulse-code modulation, baseband encoding, phase-shift keying, noise temperature, noise figure, and signal-to-noise ratio. PREREQUISITE: EO 2710.

**EO2760 ELECTROMAGNETIC THEORY (4-1).**

The experimental laws of electromagnetic theory and the development of Maxwell's equations are presented. Maxwell's equations are then utilized in the study of plane waves, transmission lines, wave guides, cavity resonators, and elementary radiation. Laboratory experiments dealing with high frequency components and measurements reinforce and extend the concepts presented in the lectures. PREREQUISITES: EO 2720 and MA 2181.

**EO2790 SURVEY OF COMMUNICATIONS SYSTEMS (4-0).**

This course supports the Intelligence curriculum by providing an overview of the principles, concepts, and trade-offs underlying communications systems. Topics include: signals and their representation as functions of time and frequency, effects of bandwidth limitations upon signals, analog and digital modems, signal-to-noise considerations in communications systems, reliable communications path concepts, major communications system design trade-offs, and examples of modern communications systems.

Upper Division or Graduate Courses

**EO3700 INTRODUCTION TO SIGNALS AND NOISE (4-1).**

A course in the analysis of signals and noise for the ASW and EW curricula. Topics include Fourier analysis of periodic and pulse signals, linear filter response, correlation and spectral density of random signals and sampling. PREREQUISITES: EO 2720 and a first course in probability.

**EO3740 SPACE POWER AND RADIATION EFFECTS (3-1).**

Fundamentals of different power systems utilized in spacecrafts; photovoltaic power technology: solid state physics, silicon solar cells, solar cell measurements and modeling, gallium arsenide cells and III-V compounds in general, array designs and solar dynamics. Radiation effects on solid state devices and materials. Survivability of solar cells and ICs in space environment and annealing methods. Other space power systems including chemical and nuclear (radioisotope thermoelectric generators, and nuclear reactors). Energy storage devices and power conversion. Spacecraft power supply design. PREREQUISITES: SS 2001 and EC 2200.

**EO3750 COMMUNICATIONS SYSTEM ANALYSIS (3-1).**

The final course in communications systems for the C3, Space Systems Operations, and Telecommunications Management curricula. The objective is to study communications from a system perspective concentrating on the relative performance of several important communication systems and the analysis of trade-offs available in the design of communications systems. Specific topics introduced include relative performance of modulation types in noise, bit error rates, error detection and correction, signal-to-noise ratio, antenna characteristics, propagation, and path calculations. Special subjects will be introduced and existing knowledge reinforced through the study of existing military communication systems. PREREQUISITE: EO 2750.

**EO3760 ELECTROMAGNETIC RADIATION, SCATTERING AND PROPAGATION (4-2).**

The fundamentals of antennas used in the VLF through the microwave portion of the electromagnetic spectrum are presented.

Scattering and propagation in this part of the spectrum are also discussed, as are those elements of electromagnetic compatibility which relate to radiation. Laboratory exercises relating to pattern and impedance measurement, and use of computer programs further enhance the student's understanding of the lecture concepts. PREREQUISITE: EO 2760.

#### **EO3780 ELECTRONIC WARFARE COMPUTER APPLICATIONS (3-2).**

Application of digital and analog techniques to the recording, processing, display, and interpretation of electronic warfare signals and data. The computer is applied to the solution of electronic warfare problems such as signal identification. PREREQUISITES: EC 2810, CS 3510, or CS 3230; EO 4780.

#### Graduate Courses

#### **EO4720 SIGNAL PROCESSING SYSTEMS (4-1).**

A study of digital, analog, and hybrid signal processing systems for communications, echo ranging, and electronic surveillance. Examples from current and proposed military systems will be analyzed. The course is designed for the ASW and EW curricula. PREREQUISITE: EO 3720.

#### **EO4730 ELECTRO-OPTIC SYSTEMS AND COUNTERMEASURES (3-1).**

A study of military applications of electro-optic systems, IR and EO missile seekers, laser designators, optical surveillance, high energy laser systems, laser communications, and laser radar. Emphasis is on system applications, countermeasures and counter-countermeasures. Students report on electro-optic systems. PREREQUISITES: EC 4410 or PH 3271; U.S. Citizenship and SECRET clearance.

#### **EO4740 COMMUNICATIONS AND COMMUNICATIONS COUNTERMEASURES (4-0).**

A mathematical formulation of signals, communication theory fundamentals, and noise interference models is presented, with an emphasis on classical analog and modern digital approaches to information transmission. An introduction to communications security via coding, cryptographic techniques, and spread spectrum modulation is presented, and signal interception/jamming methods are studied. PREREQUISITE: EO 3720.

#### **EO4750 SIGNALS INTELLIGENCE (2-0).**

This course focuses on U.S. signals intelligence capabilities for countering current threats and the processes for designing or upgrading U.S. capabilities. It is designed to enhance the student's knowledge and understanding of current and planned U.S. SIGINT systems and capabilities and the design, development and employment of SIGINT and ESM systems. PREREQUISITE: Registration in EW curriculum (595) or consent of instructor; U.S. Citizenship and SI clearance.

#### **EO4760 MICROWAVE DEVICES AND RADAR (4-2).**

Those microwave devices most important in radar and in electronic warfare systems are studied, including magnetrons, traveling-wave tubes, and solid-state diodes. The radar range equation is developed. In addition to basic pulse radar, modern techniques are discussed including doppler systems, tracking radar, pulse compression, and electronically steerable array radars. Electromagnetic compatibility problems involving radar systems are considered. Laboratory sessions deal with basic pulse radar systems from which the advanced techniques have developed, with performance measurement methods, automatic tracking systems,

pulse compression, and the measurement of radar cross-section of targets. **PREREQUISITES:** EO 4720, EO 3760 (may be taken concurrently) or consent of instructor; U.S. Citizenship and SECRET clearance.

### **EO4780 ELECTRONIC WARFARE SYSTEMS (3-2).**

This course covers electronic warfare in that portion of the electromagnetic spectrum through the millimeter wavelength region. The infrared through electro-optic region is covered in a companion course, EO 4730. Electronic denial and deceptive countermeasures against fuses, communications, and various radar detection and tracking systems are discussed. Equations for required jammer gain and power output are developed. The characteristics of passive coun-

termeasures are discussed. Other topics include anti-radiation missiles, counter-countermeasure circuits, target masking and modification, signal intercept, signal sorting, signal identification, and direction finding. Techniques are discussed in relation to U.S., allied, and communist bloc systems. Laboratory work reinforces the classroom discussions. **PREREQUISITES:** EO 4760, U.S. Citizenship and SECRET clearance.

### **EO4790 C3 COUNTERMEASURES (Variable).**

Supervised study in selected areas of electronic warfare to meet the needs of individual students. A written report is required at the end of the quarter. **PREREQUISITE:** Consent of C3 Group Chairman. Graded on a Pass/Fail basis only.

## ELECTRONIC WARFARE ACADEMIC GROUP

**Alfred William Madison Cooper**, Professor (1957); PhD, The Queen's University of Belfast, 1961.

**Kenneth L. Davidson**, Professor (1970); PhD, University of Michigan, 1970.

**Wayne Philo Hughes, Jr.**, Adjunct Professor (1979); MS, Naval Postgraduate School, 1964.

**Michael A. Morgan**, Professor (1979); PhD, University of California at Berkeley, 1976.

**Edward B. Rockower**, Associate Professor (1984); PhD, Bradeis University, 1971.

**Arthur Loring Schoenstadt**, Professor (1970); PhD, Rensselaer Polytechnic Institute, 1968.

**Joseph Sternberg**, Professor (1985); PhD, Johns Hopkins University, 1955.

**Harold A. Titus**, Professor (1962); PhD, Stanford University, 1962.

\* *The year of joining the Postgraduate School Faculty in indicated in parentheses.*

### Chairman:

Joseph Sternberg, Professor,  
Code 73, Spanagel Hall, Room 202,  
(408) 646-2214, AV 878-2214.

### Academic Associate:

Alfred Cooper, Professor,  
Code 61, Spanagel Hall, Room 212,  
(408) 646-2452, AV 878-2452.

The Electronic Warfare Academic Group is an interdisciplinary association of faculty, consisting of eight members representing five separate academic disciplines. An academic group is a less formal organization than an academic department, and each professor in the group has an appointment in an academic department. The Electronic Warfare Academic Group has administrative responsibility for the academic content of the Electronic Warfare Program of study. Teaching in this multidisciplinary program is carried out by faculty members attached to the following academic departments: Electrical and Computer Engineering, Mathematics, Meteorology, Operations Research, and Physics. Thesis topics for students in this area of study are approved by the group and the final thesis is approved by the Chairman.

### MASTER OF SCIENCE IN SYSTEMS ENGINEERING

The degree of Master in Science in

Systems Engineering (Electronic Warfare) will be awarded at the completion of a multidisciplinary program, either Curriculum 595 or 596, satisfying the following degree requirements:

The Master of Science in Systems Engineering requires a minimum of 45 quarter hours of graduate level work of which at least 15 hours must represent courses at the 4000 level. Graduate courses in at least four different academic disciplines must be included, and in two disciplines, a course at the 4000 level must be included.

An approved sequence of at least three courses constituting advanced specialization in one area must be included.

In addition to the 45 hours of course credit, an acceptable thesis must be completed.

### COURSE OFFERINGS

#### EW0002 SEMINAR (NO CREDIT) (0-1).

Special lectures and discussion of matters related to the EW program. PREREQUISITE: SECRET clearance.

#### EW0810 THESIS RESEARCH/GROUP PROJECT (0-0).

Students in the Systems Engineering curricula will enroll in this course which consists of an individual thesis or a group project involving several students and faculty.

## ENGINEERING ACOUSTICS ACADEMIC COMMITTEE

### Chairman:

Anthony A. Atchley, Asst. Professor,  
Code 61Ay, Spanagel Hall,  
Room 101H,  
(408) 646-2848, AV 878-2848.

The academic character of the programs in the Engineering Acoustics is interdisciplinary, with courses and laboratory work drawn principally from the fields of physics and electrical engineering. Although broadly based, the emphasis of the programs is on those aspects of acoustics, signal processing, and computers related to underwater sound propagation, electroacoustic transduction, and the detection, tracking, and quieting of underwater targets. These programs are designed specifically for students in the Underwater Acoustics Curriculum and government employees in acoustics-related laboratories and systems commands.

The academic aspects of the program are the responsibility of an academic committee composed of representatives from the Department of Physics and of Electrical and Computer Engineering.

### MASTER OF SCIENCE IN ENGINEERING ACOUSTICS

The degree, Master of Science in Engineering Acoustics, will be awarded as an interdisciplinary program to be carried out in accordance with the following degree requirements:

a. A student pursuing a program leading to a Master of Science in Engineering Acoustics must have completed work which would qualify him/her for a Bachelor of Science degree in engineering or physical science. Credit requirements for the Master of Science

degree must be met by courses in addition to those used to satisfy this requirement.

b. The Master of Science in Engineering Acoustics requires a minimum of 36 graduate credit quarter hours of course work; at least 20 graduate quarter hours must be taken in acoustics and its applications. One 4000 level course from each of three of the following areas must be included: wave propagation, transducer theory and design sonar systems, and signal processing.

c. An acceptable thesis must be completed.

Approval of each program by the Engineering Acoustics Academic Committee must be obtained prior to reaching the mid point of the degree program.

### DOCTOR OF PHILOSOPHY AND DOCTOR OF ENGINEERING

The Departments of Electrical Engineering and Physics jointly sponsor an interdisciplinary program in Engineering Acoustics leading to either the degree Doctor of Philosophy or Doctor of Engineering. Areas of special strength in the departments are physical acoustics, ocean acoustics, and acoustic signal processing. A noteworthy feature of this program is that a portion of the student's research may be conducted away from the Naval Postgraduate School at a cooperating laboratory or other Federal Government installation. The degree requirements and examinations are as outlined under the general school requirements for the Doctor's degree. In addition to the school requirements, the departments require a preliminary examination to show evidence of acceptability as a doctoral student.

DEPARTMENT OF MATHEMATICS

**Harold M. Fredricksen**, Chairman and Professor (1980)\*; PhD, University of Southern California, 1968.

**David Canright**, Assistant Professor (1988); PhD, University of California at Berkeley, 1987.

**Donald Alfred Danielson**, Associate Professor (1985); PhD, Harvard University, 1968.

**Richard Homer Franke**, Professor (1970); PhD, University of Utah, 1970.

**Mostafa Ghandehari**, Assistant Professor (1988); PhD, University of California at Davis, 1983.

**William Gragg**, Professor (1987); PhD, University of California at Los Angeles, 1964.

**Kim Hefner**, Assistant Professor (1988); PhD, University of Colorado, 1988.

**Ralph Hefner**, Adjunct Professor (1988); MA, University of Colorado, 1976.

**Toke Jayachandaran**, Professor (1967); PhD, Case Institute of Technology, 1967.

**William T. Kelley**, Adjunct Professor (1985); MS, University of Illinois, 1972.

**Gordon Eric Latta**, Professor (1979); PhD, California Institute of Technology, 1951.

**William Little**, Adjunct Professor (1982); PhD, Georgia Institute of Technology, 1970.

**Kenneth Robert Lucas**, Associate Professor (1958); PhD, University of Kansas, 1957.

**Norbert Luscher**, Adjunct Professor (1988); PhD, Technical University of Braunschweig, 1987.

**Beny Neta**, Associate Professor (1985); PhD, Carnegie-Mellon University, 1977.

**Guillermo Owen**, Professor (1983); PhD, Princeton University, 1962.

**Ira Bert Russak**, Associate Professor (1972); PhD, University of California at Los Angeles, 1967.

**Clyde Scandrett**, Assistant Professor (1987); PhD, Northwestern University, 1985.

**Arthur Loring Schoenstadt**, Professor (1970); PhD, Rensselaer Polytechnic Institute, 1968.

**Donald Herbert Trahan**, Associate Professor (1966); PhD, University of Pittsburgh, 1961.

**Maurice Dean Weir**, Professor (1969); DA, Carnegie-Mellon University, 1970.

**Carroll Orville Wilde**, Professor (1968); PhD, University of Illinois, 1964.

\* The year of joining the Postgraduate School Faculty is indicated in parentheses.

**Chairman:**

Harold M. Fredricksen, Professor,  
Code 53Fs, Ingersoll Hall, Room 344,  
(408) 646-2206, AV 878-2206.

**Associate Chairmen:**

**Research:**

Guillermo Owen, Professor,  
Code 53On, Ingersoll Hall, Rm. 341,  
(408) 646-2720, AV 878-2720.

**Curriculum and Advanced Programs:**

Maurice D. Weir, Professor,  
Code 53Wc, Ingersoll Hall, Rm. 335,  
(408) 646-2608, AV 878-2608.

As well as the master of science degrees, the Mathematics Department offers individually tailored minor programs for many of the School's doctoral students. The majority of the departmental effort is devoted to the service courses offered, including the refreshers, and 1000-2000 level courses. The department maintains a microprocessor lab for purposes of instruction.

**MASTER OF SCIENCE IN  
APPLIED MATHEMATICS**

In order to enter a program leading to the degree Master of Science in Applied Mathematics, a student must be qualified, by background, for a Bachelor of Science degree with a major in mathematics, or with a strong mathematical orientation in physical science or engineering.

A program that leads to the degree Master of Science in Applied Mathematics for a student who has met the entrance criteria must contain a minimum of 45 quarter hours of graduate level courses with a minimum QPR of 3.0, subject to the following conditions:

- a. The program must be approved by the Chairman of the Department of Mathematics.
- b. The program must include at least fifteen hours at the 4000 level, with at least twelve hours in 4000 level mathematics courses.
- c. The program must contain at least nine hours in an approved sequence of application courses from outside the

Mathematics Department, and at least nine hours in an approved sequence of courses from within the Mathematics Department.

d. An acceptable thesis is normally required and is credited as the equivalent of nine hours of 3000 level mathematics courses. (A student receiving a dual masters and writing a thesis in another department may petition the Chairman of the Mathematics Department to substitute nine hours of courses for the thesis.)

e. Courses in the following areas are specifically required in any program; some of these courses may be used to satisfy part (or all) of the mathematics sequence requirement in item c. above:

- (1) Real/complex analysis (a two-course sequence), or applied algebra (a two-course sequence)
- (2) Ordinary and/or Partial Differential Equations and Integral Transforms
- (3) Numerical Analysis
- (4) Probability and Statistics
- (5) Linear Algebra (a two-course sequence)
- (6) Mathematical Modeling Processes

**COURSE SEQUENCES FOR  
SPECIAL CURRICULA**

The Mathematics Department offers several sequences of courses for various curricula. Students of these curricula typically enter these sequences at their appropriate level and exit when completing their particular requirement.

**Computer Science**

MA 2025  
MA 3026

**Management**

MA 2300

**Operational Curricular**

MA 2138  
MA 3139

**Engineering Science**

- MA 1117
- MA 1118
- MA 2047
- MA 2121
- MA 3132
- MA 3232

**Operations Research**

- MA 1118
- MA 2042
- MA 3110

**PREREQUISITES**

Prerequisites are as described in the course descriptions. If a student has not taken the prescribed prerequisites at NPS, then a validation examination by the Mathematics Department may be substituted.

Generally speaking, credit for courses given in sequences will not be available to every student. Credit will be given for only one of a pair of equivalent courses.

**DEPARTMENTAL COURSE OFFERINGS**

**MA0117 REFRESHER MATHEMATICS (3-3)** (Meets last 6 weeks of quarter).

Single Variable Calculus Review.

**MA0118 REFRESHER MATHEMATICS (3-3)** (Meets last 6 weeks of quarter).

Multivariable Calculus Review.

**MA0125 INTRODUCTION TO FINITE MATHEMATICS (NO CREDIT) (3-0)** (Meets last 6 weeks of quarter).

An introduction to the elements of set theory and mathematical reasoning. Sets, Venn diagrams, truth tables, quantifiers, logical reasoning. Functions, relations, partitions and equivalence relations. 1-1 correspondence. Applications of finite mathematics such as finite difference equations, counting problems, geometric linear programming, and so forth, are included.

**MA0810 THESIS RESEARCH (0-0).**

Every student conducting thesis research will enroll in this course.

**MA1117 SINGLE VARIABLE CALCULUS (5-2).**

Review of analytic geometry and trigonometry, functions of one variable, limits, derivatives, continuity and differentiability; differentiation of algebraic, trigonometric, logarithmic and exponential functions with applications to maxima and minima, rates, differentials; product rule, quotient rule, chain rule; anti-derivatives, integrals and the fundamental theorem of calculus; definite integrals, areas, lengths of curves and physical applications; special methods of integration, including a 2 hour problem solving laboratory. **PREREQUISITE:** Precalculus mathematics.

**MA1118 MULTI-VARIABLE CALCULUS (5-2).**

Review of calculus of one variable; vector algebra and calculus, directional derivative, gradient and integral theorems; maxima and minima of functions of two independent variables, total differential; double and triple integrals, cylindrical and spherical coordinate systems; infinite series, convergence tests, uniform convergence and Taylor series, including a 2 hour problem solving laboratory. **PREREQUISITE:** Previous course in calculus.

**MA1248 SELECTED TOPICS IN APPLIED MATHEMATICS FOR C3, SPACE OPERATIONS AND COMMUNICATIONS MANAGEMENT (4-1).**

A survey of selected calculus and post calculus topics - infinite sequences and series; Fourier series and Fourier integral transforms; and matrix algebra and determinants. (This course may not be taken for credit by students in an engineering or science degree program). **PREREQUISITE:** MA 1117.

Upper Division Courses

**MA2025 BRIDGE TO ADVANCED MATHEMATICS (4-1).**

Propositional and predicate logic, elements of set theory, relations, functions and partitions. An introduction to theorem proving techniques, including mathematical induction, in the context of basic mathematical systems applied to computer science.

**MA2042 LINEAR ALGEBRA (4-0).**

Systems of linear equations, matrices, and determinants. Finite dimensional vector spaces, linear dependence, basis, dimension, inner products, orthogonalization. Linear transformations, rank and nullity, change of basis, linear functionals, orthogonal transformations, quadratic forms, symmetric matrices, diagonalization, eigenvalues and eigenvectors. PREREQUISITE: MA 1117, or MA 1118 taken concurrently.

**MA2047 LINEAR ALGEBRA AND VECTOR ANALYSIS (4-1).**

Solutions of linear systems of equations, algebra of matrices, determinants. Linear vector spaces, linear dependence and independence, subspaces, bases and dimension. Inner products, orthonormal bases and Gram-Schmidt process. Eigenvectors and eigenvalues. The algebra and calculus of vectors in  $R^2$  and  $R^3$ . Del operator, divergence and curl with applications. Line and surface integrals; Green's, Stoke's and divergence theorems. PREREQUISITE: MA 1118 (may be taken concurrently).

**MA2089 VECTOR ANALYSIS WITH MATRIX ALGEBRA (4-1).**

The algebra and calculus of vectors in  $R^2$  and  $R^3$ . Del operator, directional derivative, gradient, divergence and curl with applications to physics. Line and surface integrals, Green's, Stoke's and divergence theorems. Complex arithmetic, solutions of linear sys-

tems of equations, algebra of matrices. Linear independence, dot and cross products in  $R^3$ , bases and the Gram-Schmidt process. Eigenvalues and eigenvectors with applications to physics. PREREQUISITE: MA 1118 (may be taken concurrently).

**MA2121 DIFFERENTIAL EQUATIONS (4-0).**

Ordinary differential equations: linear and nonlinear (first order) equations, homogeneous and non-homogeneous equations, linear independence of solutions, power series solutions, systems of differential equations, Laplace transforms. Applications. PREREQUISITE: MA 1118 or equivalent, MA 2047 or equivalent concurrently.

**MA2138 SELECTED TOPICS FROM CALCULUS AND ORDINARY DIFFERENTIAL EQUATIONS (5-0).**

Partial derivatives, directional derivatives, tangent planes. Multiple integrals in rectangular, polar, cylindrical, and spherical coordinates. First order ordinary differential equations, second order linear equations with constant coefficients, Laplace transforms. Applications. For ASW and EW students only. PREREQUISITE: MA1117 or equivalent.

**MA2300 MATHEMATICS FOR MANAGEMENT (5-0).**

This course is designed to provide a mathematical basis for modern managerial tools and techniques. It includes elements of differential and integral calculus, sequences and series and an introduction to matrix algebra and solutions of linear systems of algebraic equations. PREREQUISITE: College algebra.

**MA3001 INCREMENTED DIRECTED STUDY (1-0).**

This course provides the opportunity for a student who is enrolled in a three thousand level course to pursue the course material in greater depth by directed study to the extent of one additional hour beyond the normal course credit.

**MA3002 INCREMENTED DIRECTED STUDY (2-0).**

This course provides the opportunity for a student who is enrolled on a three thousand level course to pursue the course material in greater depth by directed study to the extent of two additional hours beyond the normal course credit.

**MA3026 DISCRETE MATHEMATICS (5-0).**

Graphs, trees, matchings and network flows. Introduction to combinatorial problems and counting techniques. Recurrence relations. Combinatorial circuits and introduction to finite state machines. Applications to computer science. PREREQUISITE: MA 2025.

**MA3035 MATHEMATICAL INTRODUCTION TO MICROPROCESSORS (2-1).**

An introduction to microprocessors at the hardware/software interface. Machine language programming, assembly language programming, connecting and controlling peripherals (terminal, disc drive...), operating systems.

**MA3046 ADVANCED LINEAR ALGEBRA I (3-0).**

Special types of matrices; orthogonal reduction of a real symmetric matrix to diagonal form; quadratic forms and reductions to expressions involving only squares of the variables; applications to maxima and minima; Lambda matrices and related topics;

Cayley-Hamilton theorem. Reduced characteristic function; canonical forms, idempotent and nilpotent matrices; solutions to matrix polynomial equations; functions of a square matrix; applications such as to differential equations, stability criteria. PREREQUISITE: MA 2042.

**MA3047 LINEAR ALGEBRA II (3-0).**

Continuation of MA 3046. PREREQUISITE: MA 3046.

**MA3110 INTERMEDIATE ANALYSIS (4-0).**

Multivariable calculus integrated with linear algebra. Functions of several variables, continuous transformations, Jacobians, chain rule, implicit function theorem, inverse function theorem, extrema, Lagrange multiplier technique, curvilinear coordinates, convexity, difference equations and generating functions. PREREQUISITE: MA 1118 or equivalent, MA 2042 or equivalent concurrently.

**MA3132 PARTIAL DIFFERENTIAL EQUATIONS AND INTEGRAL TRANSFORMS (4-0).**

Solution of boundary value problems by separation of variables; Sturm-Liouville problems; Fourier, Bessel and Legendre series solutions, Fourier transforms; classification of second order equations; applications, method of characteristics. PREREQUISITE: MA 2121 or equivalent.

**MA3139 FOURIER ANALYSIS AND PARTIAL DIFFERENTIAL EQUATIONS (4-0).**

Fourier series; solution of the one and two-dimensional wave equations, D'Alembert's solution, frequency and time domain interpretations; Fourier integral transforms and applications to ordinary and partial differential equations and linear systems; Convolution theorems. For ASW and EW students. PREREQUISITE: MA 2138.

**MA3185 TENSOR ANALYSIS (3-0).**

Definition of tensor as linear function of vectors, invariant under change of coordinates. Dyadic representation of tensor in arbitrary coordinate systems with covariant or contravariant base vectors. Tensor calculus. Cartesian tensor notation. Tensors used in various applications: stress, rotation, inertia, momentum-flux, metric, Riemann-Christoffel, electromagnetic field, etc.. **PREREQUISITE:** MA 2047 or equivalent concurrently.

**MA3232 NUMERICAL ANALYSIS (4-1).**

Solution of nonlinear equations, zeros of polynomials. Interpolation and approximation. Numerical differentiation and quadrature. Matrix manipulations: linear simultaneous, algebraic equations, eigenvalues. Numerical solutions of ordinary differential equations. Analysis for computational errors. **PREREQUISITE:** MA 2121 or equivalent (may be taken concurrently) and FORTRAN programming.

**MA3243 NUMERICAL METHODS FOR PARTIAL DIFFERENTIAL EQUATIONS (4-1).**

Finite difference approximations for derivatives. Truncation and discretization errors. Parabolic and hyperbolic equations. Explicit and implicit methods. The Crank-Nicolson method. Approximations at irregular boundaries. Elliptic equations, the Liebmann method. Systems of partial differential equations. Students are expected to write FORTRAN programs for the above methods. **PREREQUISITE:** MA 3132 and FORTRAN programming.

**MA3300 TOPICS SEMINAR (3-0).**

This course provides the opportunity for a student pursuing a mathematics degree to explore in depth the interrelationships of the mathematical topics studied in the core pro-

gram. The student will be paired with an instructor who will guide and focus the study. **PREREQUISITES:** Completion of at least 16 courses in the applied mathematics core program and consent of instructor. Graded on Pass/Fail basis only.

**MA3400 MATHEMATICAL MODELING PROCESSES (3-0).**

Practice model construction while demonstrating the utility and universality of mathematics. Topics include modeling using graphical analysis, the model building process, modeling using proportionality, analysis of data, modeling using dimensional analysis, dynamical models, optimization of models and simulation. **PREREQUISITE:** MA 1118 or MA 2300 or consent of instructor.

**MA3560 MODERN APPLIED ALGEBRA (3-0).**

An introductory course in the techniques and tools of abstract algebra with special emphasis on applications to coding theory, radar and communications systems and computer science. Elements of set theory, equivalence relations and partitions. Semi-groups, groups, subgroups and homomorphisms. Ring, ideals and fields. Directed graphs and lattices. Applications may vary. **PREREQUISITE:** MA 2042 or consent of instructor.

**MA3565 MODERN ALGEBRA (3-0).**

An advanced course in the subject of abstract algebra. Semi-groups, groups, subgroups, normal subgroups. Groups acting on sets, operator groups. The Jordan-Holder Theorem, solvable groups. The Krull-Schmidt Theorem. **PREREQUISITE:** MA 3560 or consent of instructor.

**MA3605 FUNDAMENTALS OF ANALYSIS I (3-0).**

The real number system, and the usual topology of  $\mathbb{R}^n$ ; properties of continuous functions; differential of vector-valued functions, Jacobians, and applications (implicit function, inverse function theorem, extremum problems). Functions of bounded variation and theory of Reimann-Stieltjes integration, multiple and iterated integrals, convergence theorems for sequences and series of functions. PREREQUISITE: MA 3110 or consent of instructor.

**MA3606 FUNDAMENTALS OF ANALYSIS II (3-0).**

Continuation of MA 3605. PREREQUISITE: MA 3605.

**MA3610 INTRODUCTION TO GENERAL TOPOLOGY (3-0).**

Topologies, bases and subbases, compactness and connectivity. Metrization and embeddings. Convergence and nets or filters. Tychonoff product theorem, Alexandroff and Stone Cech compactification. Fractals. PREREQUISITE: MA 3605 or consent of instructor.

**MA3675 THEORY OF FUNCTIONS OF A COMPLEX VARIABLE I (3-0).**

Selected topics from the theory of functions of a real variable; complex functions, power series, Laurent series. Singularities of complex functions; residues and contour integration; zeros of analytic functions, factors of and infinite product representation for analytic functions; maximum modulus theorems for analytic and harmonic functions; conformal mapping. PREREQUISITES: MA 1118 and consent of instructor.

**MA3676 THEORY OF FUNCTIONS OF A COMPLEX VARIABLE II (3-0).**

Continuation of MA 3675. PREREQUISITE: MA 3675.

**MA3730 THEORY OF NUMERICAL COMPUTATION (3-0).**

Analysis of computational methods used for the solution of problems from the areas of algebraic equations, polynomial approximation, numerical differentiation and integration, and numerical solution of ordinary differential equations. PREREQUISITE: Consent of instructor.

**MA4027 GRAPH THEORY AND APPLICATIONS (4-0).**

Advanced topics in graph theory with an emphasis on communication networks, flows, phasing of signals and scheduling. Students learn to implement new graph theory techniques in their area of study. Further models in such areas as energy use and air flow will be examined, in addition to the core material. PREREQUISITE: MA 34026 or consent of instructor.

Graduate Courses

**MA4237 ADVANCED TOPICS IN NUMERICAL ANALYSIS (VARIABLE CREDIT, USUALLY (4-0)) (V-0).**

The subject matter will vary according to the abilities and interest of those enrolled. PREREQUISITE: Consent of instructor. Graded on Pass/Fail basis only.

**MA4300 THESIS TOPICS SEMINAR (3-0).**

This course explores in depth the thesis topics of students enrolled in the mathematics degree program. PREREQUISITES: MA 3300 and consent of instructor. Graded on Pass/Fail basis only

**MA4362 ORBITAL MECHANICS (3-0).**

A review of the two body problem; non central geopotentials; long-term periodic effects; perturbations. PREREQUISITE: Consent of instructor.

**MA4391 ANALYTICAL METHODS FOR FLUID DYNAMICS (4-0).**

The basic fluid dynamic equations will be derived, and a variety of analytical methods will be applied to problems in viscous flow, potential flow, boundary layers, and turbulence. PREREQUISITE: MA 3132 or MA 3139 or consent of instructor.

**MA4392 NUMERICAL METHODS FOR FLUID DYNAMICS (4-0).**

Numerical methods exclusively will be applied to fluid dynamics problems in viscous flow, potential flow, boundary layers, and turbulence. PREREQUISITES: MA 4391 and MA 3232 or consent of instructor.

**MA4393 TOPICS IN APPLIED MATHEMATICS (3-0).**

A selection of topics in applied mathematics. The course content varies. Credit may be granted for taking this course more than once. PREREQUISITE: Consent of instructor.

**MA4565 MODERN ADVANCED ALGEBRA (3-0).**

A continuation of MA 3565. Rings, ring homomorphism, integral domains and euclidean domains. Unique factorization rings, polynomial rings. Modules and ideals. Noetherian rings, Field extension and Galois theory. PREREQUISITE: MA 3565 or consent of instructor.

**MA4593 TOPICS IN ALGEBRA (3-0).**

A selection of topics in algebra. Content of the course varies. Students will be allowed credit for taking the course more than once. PREREQUISITE: Consent of instructor. Graded on Pass/Fail basis only.

**MA4595 MATHEMATICAL FOUNDATIONS OF FAST SIGNAL PROCESSING ALGORITHMS (3-0).**

Advanced transform algorithms for signal processing and their inversions, including the interactions between hardware and algorithm design. Block Matrix Factorization, the generalized Cooley-Tukey and Rader prime factor algorithms. The Chinese Remainder Theorem and Second Integer Representation for integers and Winograd FFT algorithms. Polynomial rings, the Chinese Remainder theorem for polynomials and reduced multiplication convolution algorithms. Quotient Fields and the Fermat and Mersenne Number Theoretic Transforms. PREREQUISITE: EC 3400 or equivalent.

**MA4611 CALCULUS OF VARIATIONS (3-0).**

Euler equation, Weierstrass maximum principle. Legendre condition, numerical procedures for determining solutions, gradient methods, Newton's method, transversality condition. Rayleigh-Ritz method, conjugate points, and applications. PREREQUISITE: MA 2121 (programming experience desirable).

**MA4612 TOPICS IN CALCULUS OF VARIATIONS (3-0).**

Recent development of the numerical solution of problems in the calculus of variations. Foundations of numerical methods, applications to control problems. Differentials, perturbations, variational equations, adjoint equations, maximum principle of Weierstrass and Pontryagin, the Legendre condition. Methods of solution: special variations, variation of extremals, dynamic programming. Applications in ship routing and missile control. PREREQUISITES: MA 2121 and computer programming or consent of instructor.

**MA4620 THEORY OF ORDINARY DIFFERENTIAL EQUATIONS (3-0).**

Introduction to the modern theory of ordinary differential equations. Systems of equations. Theoretical and constructive methods of solutions. **PREREQUISITE:** Consent of instructor.

**MA4622 PRINCIPLES AND TECHNIQUES OF APPLIED MATHEMATICS I (3-0).**

Linear operators, generalized functions and Hilbert spaces; solutions of partial differential equations by Green's functions and eigenfunctions; variational techniques and their applications to eigenfunctions; Fredholm and Volterra integral equations; asymptotic methods and perturbations. **PREREQUISITE:** MA 3132 or equivalent.

**MA4623 PRINCIPLES AND TECHNIQUES OF APPLIED MATHEMATICS II (3-0).**

Continuation of MA 4622. **PREREQUISITE:** MA 4622.

**MA4635 FUNCTIONS OF REAL VARIABLES I (3-0).**

Semi-continuous functions, absolutely continuous functions, functions of bounded variation; classical Lebesgue measure and integration theory, convergence theorems and  $L_p$  spaces. Abstract measure and integration theory, signed measures, Radon-Nikodym theorem; Lebesgue decomposition and product measure; Daniell integrals and integral representation of linear functionals. **PREREQUISITE:** MA 3606.

**MA4636 FUNCTIONS OF REAL VARIABLES II (3-0).**

Continuation of MA 4635. **PREREQUISITE:** MA 4635.

**MA4672 INTEGRAL TRANSFORMS (3-0).**

The Laplace, Fourier and Hankel transforms and their inversions; Asymptotic behavior. Applications to problems in engineering and physics. **PREREQUISITE:** Consent of instructor.

**MA4693 TOPICS IN ANALYSIS (3-0).**

A selection of topics in analysis. Content of the course varies. Students will be allowed credit for taking the course more than once. **PREREQUISITE:** Consent of instructor.

DEPARTMENT OF MECHANICAL ENGINEERING

- Anthony Healey**, Chairman and Professor (1986)\*; PhD, Sheffield University, United Kingdom, 1966.
- Gilles Cantin**, Professor (1960); PhD, University of California, Berkeley, 1968.
- Liang-Wey Chang**, Assistant Professor (1985); PhD, Purdue University, 1984.

- Chelakara S. Subramanian**, Adjunct Research Professor (1988); PhD, University of Newcastle, U.K., 1981.
- Tadayoshi Yamashita**, Adjunct Research Professor (1988); PhD, Hiroshima University, Japan, 1955.

\* The year of joining the Postgraduate School Faculty is indicated in parentheses.

**Chairman:**

Anthony J. Healey, Professor,  
Code 69Hy, Halligan Hall, Rm. M-4,  
(408) 646-2586/3462, AV 878-2536/  
3462.

**Associate Chairman:**

Matthew D. Kelleher, Professor,  
Code 69Kk, Halligan Hall, Rm. 209,  
(408) 646-2530, AV 878-2530.

The Department of Mechanical Engineering provides a strong academic program which spans across the discipline areas of structural mechanics, dynamics and control, materials science and the thermal-fluid sciences. These disciplines are blended together with an emphasis on naval engineering applications such as may be experienced on surface vessels and in submarines.

Programs leading to the degree Master of Science in Mechanical Engineering are accredited at the advanced level by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

A specific curriculum must be consistent with the general minimum requirements for the degree as determined by the Academic Council.

Any program leading to award of a degree must be approved by the Chairman of the Department of Mechanical Engineering at least two quarters before completion. In general, approved programs will require more than minimum degree requirements in order to conform to the needs and objectives of the United States Navy.

### **MASTER OF SCIENCE IN MECHANICAL ENGINEERING**

A candidate shall have completed work equivalent to the Bachelor of Science requirements of this department. Candidates who have not majored in Mechanical Engineering, or who have experienced a significant lapse in

continuity with previous academic work, initially will take undergraduate courses in mechanical engineering and mathematics in preparation for their graduate program.

The candidate must take all courses in a curriculum approved by the Chairman of the Department of Mechanical Engineering. At minimum, the approved curriculum must satisfy the requirements below.

The Master of Science degree in Mechanical Engineering requires at least 32 quarter hours of graduate level credits in Mechanical Engineering and Materials Science, at least 12 of which must be at the 4000 level. In addition, at least 8 quarter hours of graduate credit must be earned outside of Mechanical Engineering and Materials Science.

An acceptable thesis is required for Master of Science in Mechanical Engineering degree. An acceptable thesis for the degree of Mechanical Engineer may also be accepted as meeting the thesis requirement for the Master's degree. Approval of the thesis advisor and topic must be obtained from the Chairman of the Department of Mechanical Engineering.

### **MASTER OF SCIENCE IN ENGINEERING SCIENCE**

Students with acceptable academic backgrounds may enter a program leading to the degree Master of Science in Engineering Science (with major in Mechanical Engineering).

The program must include at least 36 credit hours of graduate work in the disciplines of engineering, science and mathematics, 12 of which must be at the 4000 level. Of these 36 hours, at least 20 hours (8 of which must be at the 4000 level) must be in Mechanical Engineering and Materials Science.

In addition, the program must contain at least 12 hours at the graduate level in courses outside Mechanical Engineering and Materials Science.

The student seeking the degree Master of Science in Engineering Science must submit an acceptable thesis. Programs leading to this degree must be approved by the Chairman of the Department of Mechanical Engineering.

### **MECHANICAL ENGINEER**

A graduate student with a superior academic record may enter a program leading to the degree Mechanical Engineer. A candidate is normally selected after completion of his first year of residence.

The candidate must take all courses in a curriculum approved by the Chairman of the Department of Mechanical Engineering. At minimum, the approved curriculum must satisfy the requirements stated in the paragraphs below.

The Mechanical Engineer degree requires at least 60 quarter hours of graduate level credits in Mechanical Engineering and Materials Science, at least 30 of which must be at the 4000 level. In addition, at least 12 quarter hours of graduate level credits must be earned outside of Mechanical Engineering and Materials Science.

An acceptable thesis is required for the Mechanical Engineer degree. Approval of the thesis advisor and program must be obtained from the Chairman of the Department of Mechanical Engineering.

### **DOCTOR OF PHILOSOPHY AND DOCTOR OF ENGINEERING**

The Department of Mechanical Engineering has an active program leading to the degrees of Doctor of Philosophy and Doctor of Engineering. Areas of special strength in the department are hydrodynamics, viscous flows, heat transfer, materials science, dynamics and control, vibrations and finite element analysis, and Computer Aided Design.

Entrance into the doctoral program may be requested by officers currently enrolled who have sufficiently high standing. A departmental screening examination will be administered to those so requesting. The Department also accepts officer students selected in the Navy-wide Doctoral Study Program, and civilian students selected from employees of the United States Federal Government.

All applicants who are not already enrolled as students in the Department of Mechanical Engineering shall submit transcripts of their previous academic and professional records and letters of recommendation to the Department Chairman. The Chairman, with the advice of other department members, shall decide whether or not to admit the applicant to the Doctoral Program.

Every applicant who is accepted for the Doctoral Program will initially be enrolled in the ME Program under a special option which satisfies the broad departmental requirements for the Engineer's degree and which includes research work. As soon as feasible, the student must find a faculty advisor to supervise his research and help him initially in the formulation of his plans for advanced study. As early as practicable thereafter, a doctoral committee shall be appointed to oversee that student's individual doctoral program as provided in the school-wide requirements for the Doctor's degree.

Joint programs with other departments are possible. A noteworthy feature of the program leading to the Doctor of Engineering degree is that the student's research may be conducted away from the Naval Postgraduate School in a cooperating laboratory or other installations of the Federal Government. The degree requirements are as outlined in the general school requirements for the Doctor's degree.

### **LABORATORIES**

The Mechanical Engineering Laboratories are designed as complements

to the educational mission and research interests of the department. In addition to extensive facilities for the support of student and faculty research, a variety of general use equipment is available. This includes machinery for the investigation of dynamic and static problems in engineering mechanics; a completely equipped materials science laboratory, including a scanning electron microscope, a transmission electron microscope, and an X-ray diffractometer; an oscillating water tunnel, a unique underwater towing tank, and a low turbulence water channel; a vibration analysis laboratory; a fluid power controls laboratory; a robotics and real-time control laboratory; facilities for experimentation with low velocity air flows; equipment for instruction in thermal transport phenomena; a laser doppler velocimeter; nuclear radiation detection equipment, and an interactive CAD/CAE computer graphics laboratory. Experimentation is further enhanced by a broad selection of analog and digital data acquisition and processing equipment and instrumentation.

### DEPARTMENTAL COURSE OFFERINGS MECHANICAL ENGINEERING

#### MME0810 THESIS RESEARCH (0-0).

Every student conducting thesis research will enroll in this course.

#### ME0951 SEMINARS (NO CREDIT) (0-1).

Lectures on subjects of current interest are presented by NPS faculty and invited experts from other universities and government and industrial activities.

#### Lower Division Course

#### ME1000 PREPARATION FOR PROFESSIONAL ENGINEERS REGISTRATION (3-0).

The course will cover the topics from the 8-hour Professional Examination given by the

State of California for Professional Engineer. Discussion will involve applicable engineering techniques, including design and analysis of mechanical systems and components. **PREREQUISITES:** Prior passage of EIT Exam or consent of instructor. Graded on Pass/Fail basis only.

#### Upper Division Courses

#### ME2001 INTRODUCTION TO ENGINEERING (3-0).

The origins of engineering. The role of mathematics and the physical sciences in engineering. Definition of an engineering problem, including its formulation, assumptions and method of attack. Engineering analysis. The engineering design process. Engineering communications, including graphics. This course is intended for students with a non-engineering background. **PREREQUISITE:** MA 1117 (may be taken concurrently).

#### ME2101 ENGINEERING THERMODYNAMICS (4-1).

A comprehensive coverage of the fundamental concepts of classical thermodynamics, with insight toward microscopic phenomena. The laws of thermodynamics. Equations of state. Thermodynamic properties of substances. Entropy, irreversibility and availability. Cycle analysis. Gas-vapor mixtures. Combustion and dissociation. **PREREQUISITE:** MA1118.

#### ME2201 INTRODUCTION TO FLUID MECHANICS (3-2).

Properties of fluids, Hydrostatics and stability of floating and submerged bodies. Fluid flow concepts and basic equations in steady flows: mass, momentum, and energy considerations. Dimensional analysis and dynamic similitude. Viscous effects and fluid resistance. Drag and separated flow over simple bluff bodies. **PREREQUISITE:** ME 2502.

**ME2301 INTRODUCTION TO NAVAL ARCHITECTURE (3-1).**

Introduction to the hydrostatics and hydrodynamics of a monohull vessel. Hull structural strength using simple approximations and common ship building materials. Intact initial transverse and longitudinal stability. Stability at large angles of heel and under special circumstances such as docking and after damage to the hull. Resistance and powering of the hull; determination of effective horsepower. **PREREQUISITES:** ME 2201 and ME 2601.

**ME2410 MECHANICAL ENGINEERING LAB I (2-3).**

Fundamentals of mechanical measurement systems, structure laboratory experiments using resistance strain gages, pressure transducers, temperature, flow and velocity measurement devices. Use of data acquisition and control systems. **PREREQUISITES:** ME 2101, ME 2201, and ME 2601, any of which may be taken concurrently.

**ME2440 THE DIGITAL COMPUTER AS AN ENGINEERING TOOL (3-0).**

Introduction to high-level programming languages including FORTRAN and BASIC. Development of computer programs, subroutine organization, input and output. Application of programming techniques to the solution of selected problems in Mechanical Engineering. **PREREQUISITES:** MA 1118, ME 2101, ME 2501 (all may be taken concurrently), ME 2441 (must be taken concurrently).

**ME2441 ENGINEERING COMPUTATIONAL LABORATORY (0-2).**

Introduction to the computing facilities at the Naval Postgraduate School with particular emphasis on those unique to the Department of Mechanical Engineering. Familiarization with software available at the Naval Postgraduate School for solution of engineering problems. Various programming exercises. (ME 2440 must be taken concurrently). Graded on a Pass/Fail basis only.

**ME2501 STATICS (3-0).**

Forces and moments, particles and rigid bodies in equilibrium. Simple structures, friction, first moments and centroids. **PREREQUISITE:** MA 1118 (may be concurrent).

**ME2502 DYNAMICS (4-1).**

Kinematics and kinetics of particles and rigid bodies. Rectilinear, plane curvilinear and space curvilinear motion. Newton's laws, work and energy, impulse and momentum, and impact. Plane motion of rigid bodies and introduction to gyroscopic motion. **PREREQUISITE:** ME 2501.

**ME2601 MECHANICS OF SOLIDS I (3-2).**

Stress strain, Hooke's law. Elementary stress and deformation analysis for shafts, beams and columns. Supporting laboratory work. **PREREQUISITES:** ME 2501 and MA 1118.

**ME2801 INTRODUCTION TO ENGINEERING DYNAMICS (3-2).**

Generalized system modeling principles and reduction to mathematical forms. Analogies between electrical, mechanical, fluid, and thermal systems. Response of first and second order systems characteristics, transient response. **PREREQUISITES:** ME 2502 and MA 2121.

**ME3150 HEAT TRANSFER (4-2).**

Elementary treatment of the principles of Heat Transfer application to problems in Mechanical Engineering. Steady and unsteady conduction, Principles of forced and natural convection. Thermal radiation. Boiling. Condensation. Heat exchanger analysis. Use of the thermal circuit analog, numerical and graphical techniques. Selected laboratory experiments. **PREREQUISITES:** ME 2101, ME 2201, MA 3132 (may be taken concurrently).

**ME3201 INTERMEDIATE FLUID MECHANICS (3-2).**

Steady one-dimensional compressible flow. Fundamentals of ideal-fluid flow, potential function, stream function. Analysis of viscous flows, velocity distribution in laminar and turbulent flows, introduction to the elements of the Navier-Stokes equations, solution of classical viscous laminar flow problems. Boundary-layer concepts. PREREQUISITES: ME 2101, ME 2201, MA 3132 (may be taken concurrently).

**ME3220 STEAM POWER, REFRIGERATION, AND TURBOMACHINERY (3-2).**

The conventional Rankine cycle steam plants, including superheat, reheat, and regenerative cycles. Boiler, condenser, and feed-water heater description. Thermodynamics of refrigeration systems. Fundamentals of turbomachinery: energy and momentum equations, dimensional analysis, and velocity diagrams. Blade design and work determination from blade shape. Application to pumps, fans, compressors, and turbines. PREREQUISITES: ME 2101, and ME 2201.

**ME3230 NUCLEAR POWER SYSTEMS (3-1).**

Introduction to atomic and nuclear physics. Fundamentals of nuclear reactor analysis, including nuclear and thermal aspects in core design. Reactor system design and operation. Comparison of principal reactor types emphasizing significant features of marine reactors. Basic health physics considerations and reactor shielding. Basic insight into waste management and reactor safety. PREREQUISITE: MA 3132.

**ME3240 RECIPROCATING AND GAS TURBINE POWER PLANTS (3-0).**

Thermodynamic analyses and performance characteristics of single and multi-stage reciprocating air compressors, spark ignition engines (Otto Cycle), compression ignition engines (diesel cycle), and gas turbine engines (Brayton cycle). Gas turbine component characteristics including the aerodynamics of the compressor and turbine design, and the combustor. Ship propulsion requirements, propeller characteristics, and Ship/Propeller/Power Plant matching. PREREQUISITES: ME 2101, ME 2201, (ME 3241 must be taken concurrently).

**ME3241 POWER PLANTS LABORATORY (0-3).**

Selected experiments demonstrating power plant performance, e.g., diesel engine, and gas turbine engine. (ME 3240 must be taken concurrently.) Graded on Pass/Fail basis only.

**ME3430 MECHANICAL ENGINEERING LAB II (1-3).**

A project-oriented continuation of mechanical measurement systems. Application of measurement techniques using group projects in thermodynamics, mechanics of solids, heat transfer, fluid flow, vibrations and nuclear radiation detection. PREREQUISITES: ME 2410, ME 3150, ME 3521, and ME 3611. Graded on Pass/Fail basis only.

**ME3440 ENGINEERING ANALYSIS (4-0).**

Rigorous formulation of engineering problems arising in a variety of disciplines. Approximate methods of solution. Finite Difference methods. Introduction to finite Element methods. PREREQUISITES: ME 2201, ME 2440, ME 2502, and ME 2601.

**ME3521 MECHANICAL VIBRATIONS (3-2).**

Free and forced vibration of discrete-linear systems. Vibration isolation and suppression. Vibration of bars, shafts, and beams. Supporting laboratory work. **PREREQUISITES:** ME 2502, ME 2601, and MA 2401 or equivalent (may be taken concurrently).

**ME3611 MECHANICS OF SOLIDS II (4-0).**

Fundamentals of elasticity. Failure theories. Energy methods. Indeterminate structures. Stability of simple structures. Torsion of members, with non-circular cross section. Plate behavior. **PREREQUISITES:** ME 2601 and MA 2401 or equivalent (may be taken concurrently).

**ME3711 DESIGN OF MACHINE ELEMENTS (4-1).**

Design of representative machine elements with consideration given to materials selection, tolerances, stress concentrations, fatigue, factors of safety, reliability, and maintainability. Typical elements to be designed include fastener, columns, shafts, journal bearings, spur and helical gears, and clutches and brakes. In addition to traditional design using factors of safety against failure, particular emphasis is placed on design for specified reliability using probabilistic design methods. **PREREQUISITES:** ME 2410 and ME 2601.

**ME3801 LINEAR AUTOMATIC CONTROL (3-0).**

Classical control design for linear systems with single input, single output design requirements. PID control. Transient response analysis. Root locus and frequency response methods. Control design and compensation techniques. **PREREQUISITE:** ME 2801. ME 3802 must be taken concurrently.

**ME3802 CONTROLS LABORATORY (0-2).**

Adjunct laboratory for ME 3801. Must be taken concurrently with ME 3801.

Graduate Courses

**ME3160 APPLICATIONS OF HEAT TRANSFER (4-0).**

Application of heat transfer principles to engineering systems. Topics include heat exchangers (e.g., boilers, condensers, coolers), cooling electronic components, heat pipes, solar collectors, turbine blade cooling. **PREREQUISITE:** ME 3150.

**ME4161 CONDUCTION HEAT TRANSFER (4-0).**

Steady-state heat conduction in multi-dimensions with and without heat sources. Transient conduction. Numerical methods for heat conduction. Mechanical Engineering applications. **PREREQUISITE:** ME 3150.

**ME4162 CONVECTION HEAT TRANSFER (4-0).**

Fundamental principles of forced and free convection. Laminar and turbulent duct flows and external flows. Dimensionless correlations. Heat transfer during phase changes. Heat exchanger analysis with Mechanical Engineering applications. **PREREQUISITES:** ME 3150, ME 4220.

**ME4163 RADIATION HEAT TRANSFER (3-0).**

Basic laws and definitions. Radiation properties of surfaces. Radiant interchange among diffusely emitting and reflecting surfaces. Applications and solutions of the equations of radiant interchange. Radiant interchange through participating media. Combined conduction and radiation. **PREREQUISITE:** ME 3150.

**ME4202 COMPRESSIBLE FLOW (3-0).**

Review of simple one-dimensional flow. Generalized one-dimensional flow. Two-dimensional and axisymmetric flows. Subsonic flow with small perturbations. Mach lines. Methods of characteristics. Prandtl-Meyer expansion waves. Oblique shocks, unsteady, one-dimensional flow. Introduction to compressible boundary layer. Compressible flow coverage. PREREQUISITE: ME 3201.

**ME4211 APPLIED HYDRODYNAMICS (4-0).**

Fundamental principles of hydrodynamics. Brief review of the equations of motion and types of fluid motion. Standard potential flows: source, sink, doublet, and vortex motion. Flow about two-dimensional bodies. Flow about axisymmetric bodies. Added mass of various bodies and the added-mass moment of inertia. Complex variables approach to flow about two-dimensional bodies. Conformal transformations. Flow about hydro and aerofoils. Special topics such as dynamic response of submerged bodies, hydroelastic oscillations, etc. Course emphasizes the use of various numerical techniques and the relationship between the predictions of hydrodynamics and viscous flow methods. PREREQUISITE: ME 3201.

**ME4220 VISCOUS FLOW (4-0).**

Development of continuity and Navier-Stokes equations. Exact solutions of steady and unsteady viscous flow problems. Development of the boundary-layer equations. Similarity variables, numerical and integral techniques. Separation, boundary-layer control, compressibility effects. Time-dependent boundary layers. Origin and nature of turbulence, phenomenological theories, calculation of turbulent flows with emphasis on naval engineering applications. PREREQUISITE: ME 3201.

**ME4240 ADVANCED TOPICS IN FLUID DYNAMICS (4-0).**

Topics selected in accordance with the current interests of the students and faculty. Examples include fluid-structure interactions, cable strumming, wave forces on structures, free-streamline analysis of jets, wakes, and cavities. PREREQUISITES: ME 4220 and ME 4211.

**ME4321 REACTOR ENGINEERING PRINCIPLES AND DESIGN (4-2).**

Reactor heat generation and removal. Thermal hydraulic analysis of light water reactors. Principles of reactor shielding. Materials and safety considerations in reactor design. Group design project. PREREQUISITE: ME 3230 or equivalent.

**ME4420 MARINE GAS TURBINES (4-0).**

Thermodynamic analyses of gas turbine cycles, including airbreathing and closed cycle engines. Internal aerodynamics of compressor and turbine design. Combustor and source heat exchanger design. Materials considerations. Operational controls and instrumentation. Lubrication and fuels systems. Inlet, exhaust, and silencing systems. Propulsion of surface effect, hydrofoil, and conventional surface ships. Installation arrangements. Waste heat recovery systems and combined cycles (COGAS, CODOG). Auxiliary power generation. Repair and maintenance. PREREQUISITE: ME 3240.

**ME4522 SHIPBOARD VIBRATION AND NOISE (4-0).**

Mechanical impedance, transfer matrices and their application to transmission of vibratory motion from machinery sources to hull plating. Acoustic signal generation at the hull-fluid interface. Characteristics of viscoelastic materials and their use in vibration isolation. Multi-isolator mounts.

Study of accordian and flexural vibration of ship hulls using one-dimensional finite element modeling. Military vibration specifications. Use of Vibration measurements for machinery condition monitoring. PREREQUISITE: ME 3521.

**ME4525 NAVAL SHIP SHOCK DESIGN AND ANALYSIS (4-0).**

Characteristics of underwater explosion phenomena, including the shock wave, bubble behavior and bubble pulse loading, and bulk cavitation. Surface ship/submarine bodily response to shock loading. Application of shock spectra to component design. Dynamic Design Analysis Method (DDAM) and applications to shipboard equipment design. Fluid-Structure Interaction (FSI) analysis, including Doubly Asymptotic Approximation (DAA) and surface ship FSI. Current design requirements for shipboard equipment. PREREQUISITE: ME 3521 or equivalent.

**ME4550 RANDOM VIBRATIONS AND SPECTRAL ANALYSIS (3-2).**

Engineering application of spectral analysis techniques to characterize system responses under a random vibration environment. Characteristics of physical random data and physical system responses. Application of probability concepts to random data and response analysis. Correlation and spectral density functions. Transmission of random vibration. System responses to single/multiple random excitations. Failure due to random vibration. Supporting laboratory work. PREREQUISITE: ME 3521 or equivalent.

**ME4612 ADVANCED MECHANICS OF SOLIDS (4-0).**

Selected topics from advanced strength of materials, elasticity, and the theory of plates and shells. Applications of finite element codes to the solution of difficult problems. PREREQUISITE: ME 3611.

**ME4613 FINITE ELEMENT METHODS (4-0).**

Systematic construction of line, surface, and volume elements for continuous systems. Computer programming, and applications to structural mechanics, heat transfer and fluid flow. PREREQUISITE: ME 3611.

**ME4620 THEORY OF CONTINUOUS MEDIA (4-0).**

Tensor analysis. Stress and strain tensors. Motion of continuum. Energy and entropy. Constitutive equations. Applications to elasticity and fluid dynamics. PREREQUISITES: ME 3201 and ME 3611.

**ME4721 MARINE VEHICLE DESIGN (2-4).**

Various categories of marine vehicles are described; this includes single hull, multiple hull, submarine, surface effect, wing-in-ground effect and hydrofoil vehicles. A category of marine vehicle is selected to fulfill a stated mission. A vehicle configuration and specification of major facets of marine vehicle synthesis including structures, hull forces, propulsion, electronics, armament, crew, etc. PREREQUISITE: Consent of instructor.

**ME4722 MARINE ENGINEERING DESIGN (2-4).**

A major component of a marine vehicle is designed so as to meet stated specifications. Impact of the design features of the major component upon the overall vehicle performance is considered; emphasis is on design tradeoffs. Examples of major components to be designed include complete electrical power generation and distribution systems, steering, superconducting electrical motors for main propulsion, bulbous bow for sonar, armor protection of CIC, etc. PREREQUISITE: Consent of instructor.

**ME4731 ENGINEERING DESIGN OPTIMIZATION (4-0).**

Application of automated numerical optimization techniques to design of engineering systems. Algorithms for solution of nonlinear constrained design problems. Familiarization with available design optimization programs. State-of-the-art applications. Solution of a variety of design problems in mechanical engineering, using numerical optimization techniques. **PREREQUISITES:** ME 3150, ME 3201, ME 3611, ME 2440, MA 2400, or equivalent.

**ME4811 MODERN CONTROL SYSTEMS (3-2).**

Multivariable analysis and control concepts for MIMO systems. State Observers. Linear Optimal Control. Introduction to nonlinear systems analysis. Limit cycle behavior. **PREREQUISITE:** ME 3801.

**ME4812 FLUID POWER CONTROL (3-0).**

Fluids and fluid flows in high-performance actuators and controllers. Power flow and fluid power elements - valve and pump control, linear and rotary motion. State space descriptions. Design of electro-hydraulic position and velocity control servo-mechanisms for high performance with stability. ME 4813 must be taken concurrently. **PREREQUISITE:** ME 3801.

**ME4813 FLUID POWER LABORATORY (0-2).**

Adjunct laboratory course for ME 4812. Must be taken concurrently with ME 4812.

**ME4821 ADVANCED DYNAMICS (3-2).**

Introduction to the variational principle. Kinematics and kinetics of three-dimensional motion for complex systems utilizing Newton-Euler's method, Lagrange's method, and Kane's method. Computer

software implementation and simulation. Applications in robotics emphasizing the dynamic problems of design and control. **PREREQUISITE:** ME 3521.

**ME4823 DYNAMICS OF MARINE VEHICLES (4-0).**

Development of the nonlinear equations of motion in ship-fixed coordinates. Linear forms. Elements of pathkeeping and stability for ships and submersibles. Maneuverability. Hydrodynamic aspects of hull, propulsor, and appurtenances. Design tools for estimating hydrodynamic derivatives and their effects on vehicle performance. Selected topics. **PREREQUISITE:** ME 3201.

**ME4825 MARINE PROPULSION CONTROL (3-2).**

Introduction to dynamic propulsion systems modeling and analysis methods. Control design specifications and design strategies. Introduction to modern control design theory and multivariable methods. Theory and applications of optimal control and discrete-time control systems. Case studies of current Naval propulsion control systems. **PREREQUISITES:** ME3801, ME3240 (May be taken concurrently), and MA3132.

**ME4902 ADVANCED STUDY IN MECHANICAL ENGINEERING (V-0).**

Directed advanced study in mechanical engineering on a subject of mutual interest to student and staff member after most of a student's electives have already been taken. May be repeated for credit with a different topic. **PREREQUISITE:** Permission of Department Chairman. Graded on Pass/Fail basis only.

**MATERIALS SCIENCE**

## Upper Division Course

**MS0810 THESIS RESEARCH (0-0).**

Every student conducting thesis research will enroll in this course.

**MS2201 ENGINEERING MATERIALS (3-2).**

The basic principles of materials science are covered with emphasis on the factors involved in control of the strength and ductility of metallic materials of Naval interest. Atomic and crystal structure are discussed and emphasis is given to microstructural control and microstructure-property relationships. Additional topics include crystalline defects, deformation processes, strengthening mechanisms and heat treatment. The course aims to provide the student with the working vocabulary and conceptual understanding necessary to more advanced study and for communication with materials experts. **PREREQUISITE:** Undergraduate courses in physics and chemistry and consent of instructor.

Upper Division or Graduate Courses

**MS3201 MATERIALS SCIENCE AND ENGINEERING (3-2).**

Fundamental principles of materials science are presented with particular emphasis on and advanced coverage of the relationship between microstructure and mechanical properties of engineering materials. The effects of atomic structure, crystal structure and microstructure on properties are presented. Crystalline defects, deformation processes, strengthening mechanisms, fracture, phase equilibria, phase transformations and methods of microstructural control are discussed and practical examples are included. The course aims at providing the engineering student with the vocabulary and conceptual understanding necessary for further study and for communicating on materials engineering topics. **PREREQUISITE:** Undergraduate course in chemistry and physics.

**MS3202 FAILURE ANALYSIS AND PREVENTION (3-2).**

Properties, problems and failures of structural materials are studied in the context of actual case studies. Topics of interest to Naval, Aero and Weapons engineers are included. For a given case study, the cause(s) of failure are discussed, and the relevant fundamental knowledge to fully understand the observed phenomena is developed. Failure prevention, materials developments and modern methods of materials analysis are among the many aspects that are of interest. **PREREQUISITE:** MS 3201 or equivalent or consent of instructor.

**MS3304 CORROSION AND MARINE ENVIRONMENTAL DEGRADATION (3-2).**

Presents the basic chemical, electrochemical, mechanical, and metallurgical factors which influence the corrosion, oxidation, and deterioration of materials. Discusses standard methods of corrosion control, such as cathodic protection coatings, cladding, alloy selection, and inhibitors; special problems encountered in unfamiliar environments. **PREREQUISITE:** MS 2201 or equivalent.

**MS3401 MICROSCOPY (3-2).**

Electron microscopy and other sophisticated techniques are emphasized in a coverage of modern methods of microscopic observation. Techniques covered include scanning electron microscopy, transmission electron microscopy, conventional microprobe analysis, field ion microscopy, and polarized light, stereo, interference, phase contrast, and holographic light optical methods. Course and lab will simultaneously cover both theory and practice, including specimen preparation, instrument design and operation and applications. **PREREQUISITE:** Consent of instructor.

**MS3505 MATERIALS SELECTION FOR MILITARY APPLICATIONS (4-0).**

This course deals in depth with one of the most common and important problems in materials engineering, that of selecting the optimum material for a given application. Consideration is also given to evolution of new applications for existing materials, and to materials development for new and old applications. A variety of application areas are covered, including marine structures, aerospace applications, nuclear reactors, electronics, high temperature cryogenic services, and many other situations. Sources of information, methodology, and basic rationale for materials selection decisions are presented. Emphasis is put on the variation in properties of a given material with processing history, and on variation of properties in service. **PREREQUISITE:** MS 2201 or equivalent.

**MS3606 INTRODUCTION TO WELDING AND JOINING METALLURGY (3-2).**

Welding and joining are presented from the point of view of metallurgy. Topics include the nature and applications of welding and joining processes; the welding thermal cycle; metallurgical effects of the welding thermal cycle; welding and joining of steels, aluminum alloys, stainless steels and heat resistant alloys. Also, weldment inspection and quality assurance are introduced. **PREREQUISITE:** MS 2201/3201.

**MS4215 PHASE TRANSFORMATIONS (3-2).**

Structural changes which commonly occur in materials by various mechanisms are considered. Solidification, precipitation, recrystallization, and martensitic transformations are emphasized, both in principle and in

regard to their technological importance. Principles of nucleation and growth, diffusion and kinetics are presented and their relevance to practical heat treating and fabrication processes are considered. **PREREQUISITE:** MS 2201 or equivalent.

**MS4302 SPECIAL TOPICS IN MATERIALS SCIENCE (V-0).**

Directed advanced study in materials science on a subject of mutual interest to student and staff member after the student has taken most of his electives. May be repeated for credit with a different topic. **PREREQUISITE:** Permission of Department Chairman. Graded on Pass/Fail basis only.

**MS4312 ADVANCED MATERIALS (4-0).**

The course is structured to provide a vehicle for the study of materials pertinent to a specific area of environment utilization or design. Example categories are marine materials, elevated-temperature materials, aircraft alloys materials for energy conversion. Topics discussed may include material failures, materials selection testing, and new concepts in materials engineering. Course scope is decided by mutual agreement of students and instructor. **PREREQUISITES:** MS 2201, MS 3202 or equivalent.

**MS4811 MECHANICAL BEHAVIOR OF ENGINEERING MATERIALS (4-0).**

The response of structural materials to mechanical stress is discussed with emphasis on plastic deformation in metals. Topics include elastic response and the modulus of elasticity; plasticity; deformation mechanisms and dislocation theory; strengthening mechanisms; and fatigue and fracture. Application of subject to materials development is also considered. **PREREQUISITE:** MS3202 or permission of instructor.

## DEPARTMENT OF METEOROLOGY

**Robert J. Renard**, Chairman and Professor (1952)\*; PhD, Florida State University, 1970.

**Chih-Pei Chang**, Professor (1972); PhD, University of Washington, 1972.

**Kenneth L. Davidson**, Professor (1970); PhD, University of Michigan, 1970.

**George M. Dunnavan**, Lieutenant Commander, U.S. Navy, Instructor (1989); MS, Naval Postgraduate School, 1983.

**Philip A. Durkee**, Associate Professor (1984); PhD, Colorado State University, 1984.

**Russell L. Elsberry**, Professor (1968); PhD, Colorado State University, 1968.

**John W. Glendening**, Adjunct Professor (1987), PhD, University of Washington, 1985.

**George J. Haltiner**, Distinguished Professor Emeritus (1946); PhD, University of Wisconsin, 1948.

**Robert L. Haney**, Professor (1970); PhD, University of California at Los Angeles, 1971.

**Frank L. Martin**, Professor Emeritus (1947); PhD, University of Chicago, 1941.

**Wendell A. Nuss**, Adjunct Professor (1986); PhD, University of Washington, 1986.

**Melinda S. Peng**, Adjunct Research Professor (1984); PhD, State University of New York at Albany, 1982.

**William J. Shaw**, Associate Professor (1983); PhD, University of Washington, 1982.

**Willem van der Bijl**, Professor Emeritus (1961); PhD, State University, Utrecht, 1952.

**Carlyle H. Wash**, Associate Professor (1980); PhD, University of Wisconsin, 1978.

**Forrest R. Williams**, Adjunct Professor (1983); MS, Massachusetts Institute of Technology, 1972.

**Roger T. Williams**, Professor (1968); PhD, University of California at Los Angeles, 1963.

*\*The year of joining the Postgraduate School Faculty/Staff is indicated in parentheses.*

### Chairman:

Robert J. Renard, Professor,  
Code 63Rd, Root Hall, Room 252,  
(408) 646-2516, AV 878-2516.

### Associate Chairmen:

#### Research:

Carlyle H. Wash, Assoc. Prof.,  
Code 63Wx, Root Hall, Room 249,  
(408) 646-2295, AV 878-2295.

#### Curricular Matters:

Robert L. Haney, Professor,  
Code 63Hy, Root Hall, Room 245,  
(408) 646-2308, AV 878-2308.

The Department of Meteorology is one of six Departments in the Science and Engineering Division, and its history dates back to the 1940s when it was part of the Postgraduate Department at the Naval Academy. The Department's academic function is interdisciplinary in nature in that its supports separate Master of Science Degree programs in Meteorology, Meteorology and Oceanography, and Oceanography and also provides courses for the Space, Antisubmarine Warfare Electronic Warfare and C3 Curricula.

Department academic strengths include air/ocean dynamics, and numerical modeling and prediction, structure and dynamics of the atmospheric boundary layer, satellite remote sensing and its applications, and synoptic meteorology, including analysis and prediction in tropical, middle latitude and polar regions in both hemispheres. More than fifty courses are offered in Meteorology, primarily at the graduate level. The Department has fourteen teaching faculty, and four adjunct research faculty who are active researchers, with graduate student participation as research-team members through the MS thesis and PhD dissertation process. The current areas of research concentration encompass numerical and analytic air/ocean modeling and numerical weather prediction, tropical meteorology, including monsoon circulations and tropical cyclone forecasting, climate dynamics, marine boundary layer studies with emphasis on air/sea interactions and electromagnetic/optic propagation, remote sensing/satellite meteorology, and a wide range of synoptic studies (e.g., regional studies, maritime cyclogenesis, short range forecasting, numerical-model output verification).

Both Visiting Scientist and Navy-sponsored Research Chair programs are an integral part of the Department's operation. The PhD program in the Department is active with Navy and Air Force officers, DOD civilians and internationals among its recent graduates.

## DEPARTMENT REQUIREMENTS FOR DEGREES

### Master of Science in Meteorology

Entrance to a program leading to a Master of Science degree in Meteorology requires a baccalaureate degree with completion of mathematics through differential and integral calculus and a minimum of one year of college physics.

The degree of Master of Science in Meteorology requires completion of:

- a. Mathematics courses in vector analysis, partial differential equations, and application of numerical methods and computers to the solution of differential equations.
- b. A basic course in applied probability and statistics.
- c. The basic sequence of graduate courses in the fields of dynamical, physical and synoptic meteorology which must include eighteen quarter hours in the 4000 series.
- d. An acceptable thesis.

### Master of Science in Meteorology and Physical Oceanography

Direct entrance to a program leading to the degree Master of Science in Meteorology and Physical Oceanography requires a baccalaureate degree, preferably in physical sciences, mathematics or engineering. This normally permits the validation of a number of required undergraduate courses such as physics, differential equations, linear algebra, vector analysis and various courses in meteorology and/or oceanography, which are prerequisites to the graduate program. These prerequisites may be taken at the Naval Postgraduate School; however, in that event the program may be lengthened by one or more quarters.

The degree of Master of Science in Meteorology and Physical Oceanography requires:

- a. Completion of forty-eight quarter hours in meteorology and oceanography, to include at least twenty hours in the 4000 series.
- b. The basic sequence of graduate courses in the fields of dynamical, physical and synoptic meteorology/oceanography must be included in the forty-eight hours.
- c. Completion of an acceptable thesis on a topic approved by either department.

### DOCTOR OF PHILOSOPHY

The PhD program is offered in the Department of Meteorology in the following areas of study: numerical weather prediction, geophysical fluid dynamics, boundary-layer meteorology, analysis of atmospheric systems and tropical meteorology.

The requirements for the degree are grouped into three categories: course work, research in conjunction with an approved dissertation, and examination in both the major and a minor field. The minor field is usually in physical oceanography, mathematics or physics.

The required examinations are described in this Catalog in the section Requirements for the Doctor's Degree. The Department of Meteorology also may require a preliminary examination to show evidence of acceptability as a doctoral student.

Prospective students should consult with the Chairman of the Department of Meteorology for further guidance regarding doctoral programs.

### LABORATORIES

In addition to the standard synoptic laboratories, NPS meteorological facilities include the Joint Meteorology/Oceanography Interactive Digital Environmental Analysis Laboratory, which provides real-time acquisition and analysis of conventional and remotely-sensed data in support of the synoptic and physical meteorology programs. The laboratory consists of 13 image analysis and graphics workstations hosted by a number of VAX computers with two tape drives and greater than three gigabytes of disc storage.

The Department will also complete, in 1989, the installation of its new Marine Atmospheric Boundary Layer Laboratory. This facility features state-of-the-art instrumentation for calibration work and for probing the atmosphere with both in situ and remote sensing devices. The Laboratory features a doppler radar wind profiler,

a Vaisala rawinsonde system with both Omega and LORAN-C navigational aids and a controlled temperature/humidity chamber which operates to -10 C while controlling humidity in the range 5-98%.

The Department has a variety of instruments for observing the atmosphere, and equipment for receiving weather analyses and forecasts emanating from the National Weather Service, including the DIFAX facsimile network system, the COMEDS link to the Automated Weather Network and a RADAC Weather Radar Receiver, a real-time link to the nationwide weather radar network. Additional information is received from Fleet Numerical Oceanography Center via the Naval Environmental Display System (NEDS). Weather satellite data are received on a UNIFAX recorder via GOESTAP and displayed in animated form by the Digital Weather Image Processing System. Rawinsonde equipment, acoustic sounders and micrometeorologically instrumented masts, and an NSF-owned Research Vessel operated by the Moss Landing Marine Laboratory, are utilized by faculty and students in the meteorology and oceanography programs. Supplementing the School's extensive computer facilities, discussed in the General Information section of this Catalog, the Department also maintains its own Computer Facility to support faculty and staff research, and student thesis/dissertation projects. Equipment includes a number of networked microcomputers, data and graphics terminals, plotters and printers.

### DEPARTMENTAL COURSE OFFERINGS

#### MR0110 APPLICATIONS SEMINARS (NO CREDIT) (1-0).

Presentation of DOD related research activities, applications to weapons and warfare systems, utilization of oceanography and

meteorology in specific billets, presentations by faculty, staff, selected students and visiting authorities. MR 0110 is for orientation. PREREQUISITE: Enrollment in an Air-Ocean Sciences curriculum.

**MR0111 APPLICATIONS SEMINARS (NO CREDIT) (1-0).**

Presentation of DOD related research activities, applications to weapons and warfare systems, utilization of oceanography and meteorology in specific billets, presentations by faculty, staff, selected students and visiting authorities. MR 0111 is for intermediate students. PREREQUISITE: Enrollment in an Air-Ocean Sciences curriculum.

**MR0810 THESIS RESEARCH (0-0).**

Every student conducting thesis research will enroll in this course.

**MR0999 SEMINAR IN METEOROLOGY (NO CREDIT) (2-0).**

Students present results of thesis or other approved research investigation. PREREQUISITE: Concurrent preparation of thesis or other acceptable research paper.

Upper Division Courses

**MR2020 COMPUTER COMPUTATIONS IN AIR-OCEAN SCIENCES (1-2).**

Introduction to FORTRAN and NPS main-frame computer as applied to elementary problems in oceanography and meteorology. PREREQUISITES: Calculus and college physics.

**MR2200 INTRODUCTION TO METEOROLOGY (4-0).**

A introductory course that treats the composition and structure of the atmosphere, thermodynamic processes, forces and related small- and large-scale motions, air masses, fronts, severe storms, solar and terrestrial radiation, general circulation and weather forecasting. PREREQUISITE: Department approval.

**MR2210 INTRODUCTION TO METEOROLOGY/LABORATORY (4-2).**

Same course as MR 2200 plus laboratory periods illustrating lecture material, including weather map analysis over oceanic areas using satellite imagery. PREREQUISITE: Department approval.

**MR2220 MARINE METEOROLOGY (4-1).**

An introductory course covering forces and related small-and large-scale atmospheric motions and their interaction with the ocean, severe rotating storms, fronts, general circulation and radiation, atmospheric stability, observation techniques, synoptic charts over marine regions, basics of remote sensing and satellite imagery interpretation, forecasting, climates over the ocean, and sea ice and icebergs. Laboratory exercises illustrate lecture material. PREREQUISITE: Department approval.

**MR2262 ELEMENTS OF WEATHER FORECASTING (1-2).**

Survey of subjective and objective methods of atmospheric prognosis. Weather briefings illustrate applications of forecasting principles and use of satellite imagery. PREREQUISITES: MR 3222, MR 3230 or consent of instructor.

**MR2300 OBSERVATIONS, INSTRUMENTS AND CLIMATOLOGY (3-2).**

Surface and upper-air observations, including rawinsondes. Instruments used in synoptic observations. Climate classifications, changes and controls; basic statistical quantities used in climatology; applications to world climates. PREREQUISITE: Introductory Meteorology course (may be taken concurrently).

**MR2413 METEOROLOGY OF AN-TISUBMARINE WARFARE (3-1).**

Atmospheric factors affecting the air-sea interface and the marine atmospheric boundary layer; local and synoptic-scale atmospheric features relevant to electromagnetic and electro-optical wave propagation; hands-on experience with existing environmental effects assessment models. **PREREQUISITES:** Differential and integral calculus (may be taken concurrently).

**MR2416 METEOROLOGY FOR ELECTRONIC WARFARE (2-0).**

A survey of environmental factors affecting the propagation and attenuation of electromagnetic waves. Synoptic and climatological conditions associated with anomalous refraction are studied. Ionospheric phenomena associated with longer wavelength (Hf) propagation. Layers associated with high aerosol concentration and optical turbulence are identified. Hands-on experience with existing environmental effects assessment models. **PREREQUISITES:** Differential and integral calculus. (May be taken concurrently).

**MR2419 ATMOSPHERIC FACTORS IN C3 (2-0).**

A survey of atmospheric properties and processes affecting propagation of electromagnetic (EM) and electro-optical (EO) waves. Tropospheric phenomena associated with standard and anomalous EM wave propagation at wavelengths greater than 10 meters. Ionospheric phenomena associated with larger wavelength (Hf) propagation. **PREREQUISITE:** Enrollment in C3 curriculum.

**MR2520 SURVEY OF AIR-OCEAN REMOTE SENSING (3-0).**

Overview of systems for remote sensing of the atmosphere and oceans from space, and operational applications. **PREREQUISITES:** Undergraduate Physics and Calculus, or consent of instructor.

**MR3140 PROBABILITY AND STATISTICS FOR AIR-OCEAN SCIENCES (3-2).**

Basic probability and statistics in the air-ocean science context. Techniques of statistical data analysis. Structure of a probability model, density distribution function, expectation and variance. Binomial, Poisson and Gaussian distributions. Conditional probability and independence. Joint distributions, covariance and central limit theorem. Transformations of random variables. Histograms and empirical distributions and associated characteristics such as moments and percentiles. Standard tests of hypotheses and confidence intervals for both one- and two-parameter situations. Regression analysis as related to least squares estimation. **PREREQUISITE:** Calculus.

**MR3150 ANALYSIS OF AIR/ OCEAN TIME SERIES (3-2).**

Analysis methods for atmospheric and oceanic time series. Fourier transforms applied to linear systems and discrete data. Correlation functions, power density spectra and cospectra. Optimal design of air-ocean data networks. Laboratory work involves analysis of actual atmospheric and oceanic time series using principles developed in class. **PREREQUISITES:** MA 3132, and a probability and statistics course.

**MR3212 POLAR METEOROLOGY/OCEANOGRAPHY (4-0).**

Operational aspects of arctic and antarctic meteorology. Polar oceanography. Sea-ice; amount, its seasonal distribution, melting and freezing processes, physical and mechanical properties, drift and predictions. **PREREQUISITES:** OC 3240, MR 3222 or consent of instructor.

**MR3220 METEOROLOGICAL ANALYSIS (4-0).**

Techniques of evaluation, interpretation and analysis of pressure, wind, temperature and moisture data, including weather satellite observations, with emphasis on the low and middle troposphere. Synoptic models of extratropical vortices, waves and frontal systems, with emphasis on three dimensional space structure and time continuity, including isentropic surfaces and vertical cross-section analysis. Introduction to analysis in the high troposphere and low stratosphere. **PREREQUISITES:** MR 3420, MR/OC 3321.

**MR3222 METEOROLOGICAL ANALYSIS/LABORATORY (4-3).**

Same as MR 3220 plus laboratory sessions on the concepts considered in the lectures, with emphasis on the analysis of the low and middle troposphere, streamline and isotach analysis techniques, satellite interpretation, and vertical cross-section analyses. **PREREQUISITE:** MR 3420, MR/OC 3321.

**MR3230 TROPOSPHERIC AND STRATOSPHERIC METEOROLOGY. (4-0).**

An analytic and synoptic interpretation of tropospheric and stratospheric systems with emphasis on the middle and high latitude aspects of extratropical cyclones, jet streams and fronts, and related dynamical properties. **PREREQUISITES:** MR 3222; MR 4322 (may be concurrent).

**MR3234 TROPOSPHERIC AND STRATOSPHERIC METEOROLOGY LABORATORY (4-3).**

Same as MR 3230 plus laboratory sessions utilizing the IDEA Lab to facilitate the physical understanding of dynamical relationships, including vorticity, divergence and vertical velocity. **PREREQUISITES:** Enrollment in Operational Physical Oceanography Curriculum or consent of Chairman; MR 3222; MR 4322 (may be concurrent).

**MR3235 TROPOSPHERIC AND STRATOSPHERIC METEOROLOGY LABORATORY (0-7).**

Laboratory sessions utilizing the IDEA Lab to facilitate physical understanding of dynamical relationships, including vorticity, divergence and vertical velocity. Practice in 4-dimensional synoptic-scale analysis of variables considered in MR 3230. **PREREQUISITES:** MR 3222; MR 4322 (may be concurrent); usually concurrent with MR 3230.

**MR3240 RADAR METEOROLOGY. (3-0).**

Principles of radar meteorology. Topics covered include radar systems, meteorological radar equation, doppler radar basics, propagation, attenuation, precipitation and velocity estimation, and characteristic echoes. **PREREQUISITES:** MR 3222 and MR 3522.

**MR3250 TROPICAL METEOROLOGY (3-0).**

Structure and mechanisms of synoptic-scale wave disturbances, cloud clusters, upper-tropospheric systems, the intertropical convergence zone; structure, development and motion of tropical cyclones; monsoon circulations. Emphasis on analysis and energetics. **PREREQUISITES:** MR 4322, MR 3230, MR 3234 or MR 3235 (may be concurrent).

**MR3252 TROPICAL METEOROLOGY LABORATORY (3-4).**

Same as MR 3250 plus laboratory sessions on analysis of tropical systems emphasizing streamline and isotach analysis and incorporating aircraft and satellite observations. Exercises stress tropical cyclone regimes. Satellite imagery is used as an analysis tool and also in forecasting tropical cyclone intensity. A track forecasting exercise provides an exposure to the use of various dynamic, climatological and statistical forecast models. **PREREQUISITES:** MR 4322; MR 3230; and MR 3235 or MR 3234 (may be concurrent).

**MR3254 TROPICAL METEOROLOGY LABORATORY (3-2).**

Same as MR3250, plus laboratory sessions stressing tropical general circulation, satellite interpretation and tropical cyclone structure. Tropical summary briefs and track forecasting exercises provide an understanding of the tropical cyclone warning system and the uses of various dynamical, climatological and statistical forecast models. **PREREQUISITES:** Enrollment in Operational Oceanography Curriculum or consent of Chairman, MR 4322, either MR 3230 and MR 3235 (may be concurrent) or MR 3234 (may be concurrent).

**MR3260 OPERATIONAL ATMOSPHERIC PREDICTION (3-0).**

Subjective and objective methods of atmospheric prognosis and techniques for forecasting operationally-important weather elements from surface to 100 mb. Interpretation, use and systematic errors of computer-generated products. Weather satellite briefs and applications of forecasting principles to current situations. **PREREQUISITES:** MR 3230, or MR 3234; MR/OC 4323 or consent of instructor.

**MR3262 OPERATIONAL ATMOSPHERIC PREDICTION LABORATORY (3-5).**

Same as MR3260 plus laboratory sessions on the application of lecture material. Also, practice in weather briefing, including diagnosis and forecasting of current weather situations using weather satellite observations and National Meteorological Center and Fleet Numerical Oceanography Center products. **PREREQUISITES:** MR 3230, or MR 3234; MR/OC 4323 or consent of instructor.

**MR3321 AIR-OCEAN FLUID DYNAMICS (4-0).**

The hydrodynamical equations for a rotating stratified fluid. Forces, kinematics, boundary conditions, scale analysis. Simple balanced flows; baroclinicity, thermal wind; vorticity and divergence: rotational and divergent part of the wind; circulation theorem. Vorticity and potential vorticity equations. **PREREQUISITE:** MA 2047.

**MR3420 ATMOSPHERIC THERMODYNAMICS (3-0).**

The physical variables; properties of gases, water and moist air; equations of state and the laws of thermodynamics applied to the atmosphere; adiabatic processes and potential temperature; meteorological thermodynamic diagrams; geopotential and hydrostatic equilibrium, vertical motion in the atmosphere, stability criteria and condensation levels. **PREREQUISITE:** MA1116 or equivalent.

**MR3421 CLOUD PHYSICS (3-0).**

Basic principles of cloud and precipitation physics and application to weather modification. Selected topics in atmospheric pollution. **PREREQUISITE:** MR 3420.

**MR3445 OCEANIC AND ATMOSPHERIC OBSERVATIONAL SYSTEMS (2-2).**

Principles of measurement: sensors, data acquisition systems, calibration, etc. Methods of measurement for thermodynamic and dynamic variables in the ocean and atmosphere, including acoustics and optics. **PREREQUISITES:** OC 3230 and MR 3420, MR/OC 3150 or consent of instructor.

**MR3455 MEASUREMENT SYSTEMS FOR THE MARINE AND COASTAL ATMOSPHERIC BOUNDARY LAYER (2-2).**

The course treats a broad spectrum of measurement techniques for atmospheric dy-

dynamic and thermodynamic variables. Laboratory sessions provide hands-on experience with various state of the art sensing systems, including NPS's new Doppler Radar Wind Profiler. Topics include sensor static and dynamic characteristics; calibration; in situ measurements of wind, pressure, temperature, humidity and radiation on the surface, on balloon-borne sounding systems and on aircraft; and surface-based remote sensing systems, including wind profiler, SODAR and LIDAR. **PREREQUISITES:** MR 3222 and MR 3150, or consent of instructor.

**MR3520 REMOTE SENSING OF THE ATMOSPHERE AND OCEAN (4-0).**

Principles of radiative transfer and satellite sensors and systems; visual, infrared and microwave radiometry and radar systems; application of satellite remotely-sensed data in the measurement of atmospheric and oceanic variability. **PREREQUISITES:** Undergraduate physics and differential/integral calculus, ordinary differential equations or consent of instructor.

**MR3522 REMOTE SENSING OF THE ATMOSPHERE AND OCEAN LABORATORY (4-2).**

Same as MR 3520 plus laboratory sessions on the concepts considered in the lecture series. **PREREQUISITES:** Same as MR 3520.

**MR3540 RADIATIVE PROCESSES IN THE ATMOSPHERE (3-0).**

Applications of radiation theory to atmospheric energy budgets, general circulation and anthropogenic climate changes. Radiational imbalance at the surface leading to heat fluxes and temperature changes in atmosphere and earth. Upper atmosphere phenomena (ozonosphere and ionosphere). Radiative effects of clouds and aerosols, and optical phenomena. **PREREQUISITES:** MR 3420, MR 3520 or MR 3522.

**MR3570 OPERATIONAL OCEANOGRAPHY AND METEOROLOGY (2-4).**

Experience at sea acquiring and analyzing oceanographic and atmospheric data using state of the art instrumentation. Integration of satellite remote sensing and other operational products with in situ data. Includes survey of instrumentation, pre-cruise planning, operations at sea and post-cruise analysis. **PREREQUISITES:** OC 3240 and MR 3220, or consent of instructor.

**MR4241 MESOSCALE METEOROLOGY (3-0).**

Descriptive and physical understanding of subsynoptic-scale weather systems and their relation to the synoptic-scale environment. Applications to short-range and local-area forecasting utilizing satellite and numerical-model products relevant to mesoscale weather phenomena. **PREREQUISITES:** MR 3230, MR/OC 4323, or MR 4322 with consent of instructor.

**MR4242 ADVANCED TROPICAL METEOROLOGY (3-0).**

Theories and observations of equatorial waves and low-frequency oscillations; energy sources and instabilities; monsoon circulations. Tropical cyclone models and forecasting; selected topics in diagnostic and theoretical studies of tropical flows. **PREREQUISITE:** MR 3250 and consent of instructor.

**MR4250 ATMOSPHERIC GENERAL CIRCULATION (3-0).**

The observed circulation. Zonal mean and eddy motions. Balances of momentum, heat and moisture. Energetics. Maintenance of circulation. Zonally asymmetric circulations. Other selected topics of the general circulation of the atmosphere. **PREREQUISITE:** MR 4322 and consent of instructor.

**MR4322 DYNAMIC METEOROLOGY (4-0).**

Pressure coordinates, scale analysis, perturbation method; solutions of equations of motion for sound, gravity and synoptic waves; baroclinic and barotropic instability; energetics; geostrophic adjustment. PREREQUISITES: MR 3420, MR/OC 3321, MA 2047, MA 2121 or equivalent.

**MR4323 NUMERICAL AIR AND OCEAN MODELING (4-2).**

Numerical models of atmospheric and oceanic phenomena. Finite difference techniques for solving hyperbolic, parabolic and elliptic equations, linear and nonlinear computational instability. Spectral and finite element models. Filtered and primitive equation prediction models. Sigma coordinates. Objective analysis and initialization. Moisture and heating as time permits. PREREQUISITES: MR 4322, OC 4211, MA 3132; MA 3232 desirable.

**MR4324 ADVANCED NUMERICAL WEATHER PREDICTION (3-0).**

Initialization, boundary conditions; sensible, latent and radiative heat transfer; simulation of sub-grid scale processes such as convection and friction; spectral methods and finite element models; general circulation models. PREREQUISITE: MR/OC 4323 or consent of instructor.

**MR4331 ADVANCED GEOPHYSICAL FLUID DYNAMICS I (3-0).**

Advanced topics in the dynamics of the atmosphere and the oceans including scale analysis; geostrophic adjustment; dispersion, and barotropic and baroclinic instabilities. PREREQUISITE: Consent of instructor.

**MR4332 ADVANCED GEOPHYSICAL FLUID DYNAMICS II (3-0).**

Normal mode and absolute baroclinic instability; frontogenesis; boundary layer analysis with application; finite amplitude baroclinic waves. PREREQUISITE: consent of instructor.

**MR4413 AIR-SEA INTERACTION (4-1).**

Fundamental concepts in turbulence. The atmospheric planetary boundary layer, including surface layer and bulk formulae for estimating air-sea fluxes. The oceanic planetary boundary layer including the dynamics of the well-mixed surface layer. Recent papers on large-scale air-sea interaction. PREREQUISITES: MR/OC 3150 and OC 3240 or MR 4322, or consent of instructor.

**MR4414 ADVANCED AIR/SEA INTERACTION (3-0).**

Advanced topics in the dynamics of the atmospheric and oceanic planetary boundary layers. PREREQUISITE: MR/OC 4413 or consent of instructor.

**MR4415 ATMOSPHERIC TURBULENCE (3-0).**

Approaches for defining the structure of the turbulent atmospheric boundary layer. Review of statistical descriptions of atmospheric turbulence; averaging, moments, joint moments, spectral representation. Equations for turbulent regime in a stratified, shear flow. Scaling parameters and similarity theories for surface layer profiles, spectra; Kolmogorov hypotheses, Manin-Obukhov similarity theory. Measurement of atmospheric turbulence. Examination of observed spectra and scales of atmospheric turbulence. PREREQUISITE: MR/OC 3150 or consent of instructor.

**MR4416 ATMOSPHERIC FACTORS IN ELECTROMAGNETIC AND OPTICAL PROPAGATION (4-0).**

Principles of microwave and optical wave propagation in the atmosphere. Effects of surface and boundary layers on propagation; refraction, scattering, attenuation, ducting, etc. Hands-on experience with existing environmental effects assessment models. **PREREQUISITE:** MR/OC 4413 (may be concurrent).

**MR4520 TOPICS IN SATELLITE REMOTE SENSING (3-0).**

Selected topics in the advanced application of satellite remote sensing to the measurement of atmospheric and oceanic variables. **PREREQUISITE:** MR/OC 3522.

**MR4800 ADVANCED TOPICS IN METEOROLOGY (Variable).**

Advanced topics in various aspects of meteorology. Topics not covered in regularly offered courses. The course may be repeated for credit as topics change. **PREREQUISITE:** Consent of Department Chairman and instructor.

**MR4900 SPECIAL TOPICS IN METEOROLOGY (Variable).**

Directed study of selected areas of meteorology to meet the needs of the individual student. **PREREQUISITE:** Consent of Department Chairman and instructor. Graded on Pass/Fail basis only.

DEPARTMENT OF  
NATIONAL SECURITY AFFAIRS

**Thomas C. Bruneau**, Chairman and Professor (1987)\*; PhD, University of California at Berkeley, 1970.

**Donald Abenheim**, Assistant Professor (1985); PhD, Stanford University, 1985.

**John William Amos, II**, Associate Professor (1970); PhD, University of California at Berkeley, 1972.

**Loftur L. Bjarnason**, Professor Emeritus (1958); PhD, Stanford University, 1951.

**Sherman Wesley Blandin, Jr.**, Professor Emeritus (1968); PhD, University of Santa Clara, 1977.

**Jan S. Breemer**, Adjunct Professor (1988); PhD, University of Southern California, 1987.

**Claude A. Buss**, Adjunct Professor (1976); PhD, University of Pennsylvania, 1927.

**Ralph Norman Channell**, Adjunct Professor (1987); MA, Boston University, 1964.

**Thomas B. Grasse**y, Associate Professor (1987); PhD, University of Chicago, 1983.

**Boyd Francis Huff**, Professor Emeritus (1958); PhD, University of California, Berkeley, 1955.

**Kerry M. Kartchner**, Assistant Professor (1984); PhD, University of Southern California, 1987.

**Edward John Laurance**, Associate Professor (1972); PhD, University of Pennsylvania, 1973.

**Robert Edward Looney**, Professor (1979); PhD, University of California at Davis, 1969.

**Ralph Harry Magnus**, Associate Chairman and Associate Professor (1976); PhD, University of California at Berkeley, 1971.

**Edward Allan Olsen**, Associate Chairman and Professor (1980); PhD, The American University, 1974.

**Patrick Johnston Parker**, Professor (1974); MBA, University of Chicago, 1955.

**Kamil T. Said**, Adjunct Professor (1975); MA, San Jose State College, 1967.

**Joseph Sternberg**, Professor (1985); PhD, Johns Hopkins University, 1955.

**Russel Henry Stolfi**, Professor (1966); PhD, Stanford University, 1966.

**Frank Michael Teti**, Associate Professor (1966); PhD, Syracuse University, 1966.

**Scott D. Tollefson**, Adjunct Professor (1988); PhD, Johns Hopkins University, 1989.

**James John Tritten**, Associate Professor (1986); PhD, University of Southern California, 1984.

**Mikhail Tsympkin**, Assistant Professor (1987); PhD, Harvard University, 1985.

**David Scott Yost**, Associate Professor (1979); PhD, University of Southern California, 1976.

\* *The year of joining the Postgraduate School Faculty is indicated in parentheses.*

**Chairman:**

Thomas C. Bruneau, Professor,  
Code 56Bn, Root Hall, Room 100,  
(408) 646-2521, AV 878-2521.

**Associate Chairmen:****Administration:**

David S. Yost, Assoc. Professor,  
Code 56Yo, Root Hall, Room 103A,  
(408) 646-2597, AV 878-2597.

**Instruction:**

Ralph H. Magnus, Assoc. Professor,  
Code 56Mk, Root Hall, Room 201C  
(408) 646-2294, AV 878-2294.

**Research:**

Edward A. Olsen, Professor,  
Code 56Os, Root Hall, Room 201J,  
(408) 646-3163, AV 878-3163.

The Department of National Security Affairs offers programs of study in three major fields, supporting eight different curricula. The three major fields encompass Geographic Area Studies, Strategic Planning and Intelligence. The area studies are subdivided into five groups as follows:

Middle East, Africa and South Asia  
Far East, Southeast Asia and the  
Pacific Europe and USSR  
Western Hemisphere  
International Organizations and  
Negotiations

Individual programs in the Area Studies focus on one of the subregions listed or contain a blend of all subregions in the area. The Area Studies program may include a program of study in a language of the area at the Defense Language Institute, located in Monterey.

The field of Strategic Planning includes both general and nuclear strategic planning. Individual programs focus on the evolutionary history of the planning process, strategies for na-

tional security, naval and maritime strategy, and management and planning systems.

The Intelligence Curriculum is an interdisciplinary program which integrates political science, mathematics, operations analysis, oceanography, aeronautical engineering, electrical engineering, physics, information systems, and managerial economics into an understanding of intelligence. Approximately half of the coursework in this technical (non-engineering) curriculum is undertaken in Naval Postgraduate School academic departments under the Dean of Science and Engineering; the remaining courses are in the information and policy sciences.

Coursework addresses three broad fields: defense technology, analysis and management, and national security affairs. The defense technology courses are designed to address the special problems of technical intelligence, emphasizing technical literacy and the ability to communicate concerning technological and environmental problems. This sequence seeks to provide the perspective that will assist assessment of the reality and significance of technical and environmental data, as well as ensure familiarity with the resources in these fields that may be applied to intelligence problems.

The analysis and management coursework provides the student with a grounding in quantitative techniques, substantive research methods, and the concepts of resource management. Students are introduced by various means to structure given problems, formulate possible solutions, organize and compile supporting data, assess the reliability, and communicate the significance of the results obtained.

Graduate courses in National Security Affairs outline the interface between international politics, national security objectives, resource management and weapons technology. The sequence synthesizes the political, technological, economic, cultural, social

and ideological forces that influence the actors in the international system and models varying scenarios of interaction between them.

### **DEPARTMENTAL REQUIREMENTS FOR THE DEGREE MASTER OF ARTS IN NATIONAL SECURITY AFFAIRS**

1. At least 44 units of approved graduate study pertinent to the field of National Security Affairs, of which at least 16 units must be at the 4000 level.

2. The completion of an approved sequence of courses in one of the areas of concentration:

a. Area specialization: Completion of graduate courses in the geographic area of specialization, including a 4000 level course.

b. Functional Specialization: Completion of graduate courses in either Strategic Planning or International Organizations and Negotiations, including a 4000 level course.

3. Successful completion of departmental comprehensive examination or completion of an acceptable thesis.

4. Language proficiency, when applicable, for geographic area specialization.

### **DEPARTMENTAL REQUIREMENTS FOR THE DEGREE MASTER OF SCIENCE IN NATIONAL SECURITY AFFAIRS**

The degree Master of Science in National Security Affairs will be awarded upon the completion of an interdisciplinary program carried out in accordance with the following degree requirements:

a. A minimum of 45 quarter hours of graduate level work of which at least 12 hours must represent courses at the 4000 level. Graduate courses in at least three different academic disciplines

must be included, and in two disciplines a course at the 4000 level must be included.

b. An approved sequence of at least three courses constituting advanced study in an area of specialization must be included.

c. In addition to the 45 hours of course credit, an acceptable thesis must be completed.

d. The program must be approved by the Chairman of the Department of National Security Affairs.

### **DEPARTMENTAL COURSE OFFERINGS**

#### Lower Division Courses

#### **NS1500 AMERICAN LIFE AND INSTITUTIONS (3-0).**

American political institutions and the political, social, economic, and cultural aspects of American Life. OPEN TO ALLIED OFFICERS. Graded on Pass/Fail basis only.

#### **NS2000 MILITARY HISTORY: WAR IN THE MODERN WORLD (3-0).**

Study of the history of war primarily since 1815. Course emphasizes the connection among battles, strategic doctrine, and political objectives. Students have the opportunity to extract the lessons of modern war fighting and the political situations associated with war. Course prepares students to recognize and use historical analogy and to gain more effective understanding of contemporary military and maritime strategy by being able to apply the lessons of history to it.

#### **NS2050 MARITIME STRATEGY (3-0).**

This course supports all other NPS curricula. A policy-oriented analysis of the maritime and naval components of our national military strategy. Introduces the students to the relationship of war at sea and other uses of the sea to what happens ashore. Introduces the student to the use of maritime assets for political gain, and the

impact of technology on maritime roles, missions, and capabilities. **PREREQUISITE:** NS 2000 or permission of instructor.

**NS2154 INTELLIGENCE AND THE MILITARY (4-0).**

An overview of the intelligence structure and a survey of the intelligence process focusing on the application of intelligence to the military mission. The organization and functions of the various elements of the intelligence community are presented. Primary emphasis is placed on the use of intelligence by military decision makers. Included are overviews of systems supporting the collection, production and dissemination of intelligence. The course is intended for the non-intelligence specialist and is available to any student wishing to learn about the intelligence community and its ability to provide support to the military.

Upper Division or Graduate Courses

**NS3000 MILITARY HISTORY: WAR IN THE MODERN WORLD (4-0).**

Study of the history of war since 1815. Course emphasizes the connection between the events of war, strategy and policy in the international system of states. The class compares the military experience of the leading world powers, seeking to demonstrate how war has become total in the modern age. The different national experiences with policy, strategy, operations and tactics form the central focus of the course. Students are expected to prepare an individual project on a selected problem of the history of war for presentation to the class.

**NS3011 POLICY ANALYSIS AND RESEARCH METHODS FOR AREA STUDIES (4-0).**

Survey of the methods and techniques for synthesis, analysis, interpretation and reporting of data used in the assessment of elites/countries regions, and events such as

low-intensity and regional conflict, and military intervention. topics include the components of a policy research design, sampling, the comparative case study approach, methods of generating data, and the analysis of policy options through hypothesis testing. **PREREQUISITE:** NS 1010.

**NS3012 FORECASTING AND RESEARCH METHODS FOR STRATEGIC PLANNING (4-0).**

Survey of the methods and techniques used in conducting research, hypothesis testing and forecasting. The focus is on those national security issues related to the strategic planning and international negotiations process. Topics include policy research design, generation and statistical analysis of data, and forecasting techniques such as trend analysis and extrapolation, cross-impact matrix analysis, probabilistic forecasting, structuring techniques, delphi, expert judgment and genius forecasting, scenario building, and simulation modeling to include war gaming. **PREREQUISITE:** NS 1010.

**NS3021 THE ROLE OF THE SUPER-POWERS IN THE THIRD WORLD (4-0).**

An analysis of evolving bi-polar influences on the developing nations focusing on the role of the United States, Soviet Union, Great Britain, Japan, and emerging nations politico-military and economic systems in the Third World. **PREREQUISITE:** NS 3040.

**NS3022 THE INTERNATIONAL CONTEXT FOR STRATEGIC PLANNING (4-0).**

Survey of concepts, processes and historical developments which define the present and future international environment for strategic planning, international negotiations, and intelligence. This course will utilize the systems approach to integrate the strategic

planning effort at the institutional level with regional and global factors. These factors include actors interactions, and environmental components such as technology, ideologies, value systems, geopolitics, and ecology.

**NS3023 CONCEPTS OF INTERNATIONAL RELATIONS AND COMPARATIVE POLITICS (4-0).**

Examination of critical concepts and analytical frameworks used in studying inter-state and intra-state politics. The study of the international environment emphasizes elements of national power, dynamics of state conflict, forces affecting state actions, conflicting values, ideologies and the international order. The comparative politics portion of the course focuses on models of nation building, mobilization, elite recruitment, regime types, the dynamics of intra-state political violence, and the impact of varying socio-economic conditions on political structures and functions.

**NS3030 AMERICAN NATIONAL SECURITY POLICY/ DEFENSE ORGANIZATION (4-0).**

An institutional and functional analysis of the national and international factors which shape U.S. defense policy. Attention in the course is focused on two major areas: 1) the decision-making process, including the legislative-executive budgetary process, as well as the influence of bureaucratic politics and interest group participation upon defense decisions; 2) the problems of strategic choice, including security assistance, threat analysis, net assessment, deterrence theory, and limited war.

**NS3040 THE POLITICS OF GLOBAL ECONOMIC RELATIONS (4-0).**

An integrated analysis on the economic and political factors that together determine national and international economic arrange-

ments. The student first addresses the general principles of public finance as a prerequisite for the analysis of budgets and policy priorities in specific countries and areas. The remainder of the course is concerned with the changing world economic order including issues such as trade, aid, cross national security assistance, multi-national corporations technology and strategic resources.

**NS3050 MARITIME STRATEGY (4-0).**

A policy-oriented analysis of the maritime and naval components of our national military strategy. Introduces to the student the relationship of war at sea and other uses of the sea to what happens ashore. Introduces to the student the use of maritime assets for political gain and the impact of technology on maritime roles, missions, and capabilities. Students are expected to prepare an individual project for presentation to the class. **PREREQUISITE:** NS 3000 or permission of instructor.

**NS3150 INTELLIGENCE DATA ANALYSIS AND RESEARCH METHODS (4-2).**

A survey of methods and techniques for synthesis, analysis, interpretation, and reporting of data. Topics include sampling methods, content analysis, data handling and processing, scaling techniques, parametric and non-parametric tests, with emphasis on application to intelligence. **PREREQUISITES:** NS 1010, OS 3101, MA 2311 or equivalent. **TOP SECRET Clearance** with eligibility for **SPECIAL INTELLIGENCE Information.**

**NS3151 INTELLIGENCE SYSTEMS AND PRODUCTS (4-0).**

This course is intended for students in the command and control program. It provides an introduction to intelligence systems and products which support command decision

making, an overview of Soviet command and control concepts and practices required for an appreciation of the significance of intelligence reporting, an insight into intelligence procedures to provide perspective for operational security planning, and material on Soviet intelligence organizations and capabilities. **PREREQUISITES:** TOP SECRET clearance with eligibility for SI/SAO, U.S. Citizenship. **SPECIAL INTELLIGENCE** information.

**NS3152 NAVAL WARFARE AND THE THREAT ENVIRONMENT (4-0).**

This course supports NPS warfare curricula. It concentrates on the threat posed by Soviet naval warfare forces to successful accomplishment of the U.S. Navy's missions. Issues include: U.S. missions in conflict situations; U.S. intelligence and analysis of the Soviet threat; the politico-military and strategic contexts underlying the use of Soviet naval and other forces for maritime warfare; current status and trends in Soviet naval warfare capabilities; continuities and changes in the missions and operations of Soviet naval and related forces; trends in the superpower naval warfare balance. **SECRET CLEARANCE** is required.

**NS3230 STRATEGIC PLANNING AND U.S. NATIONAL SECURITY POLICY (4-0).**

The focus of this course will be on long term strategic planning and will include such topics as: Strategic Goal Analysis, national and transnational power assessment, analysis of the decision making and administrative processes at the national level, indigenous constraints on the policy process, forecasting and future research techniques and the application of the concepts of strategic planning to the national defense effort. **PRE-REQUISITE:** NS 3030.

**NS3250 DEFENSE RESOURCES ALLOCATION (4-1).**

A presentation of the concepts, principles and methods of defense resources allocation as they pertain to planning, programming, budgeting and related activities. Emphasis is placed on the analytical aspects of decision making drawn from the disciplines of management theory, economics and quantitative analysis. The laboratory sessions include problems and case studies in which the concepts and methods are applied to illustrative situations.

**NS3263 STRATEGIC PLANNING FOR SOUTHWEST ASIA (4-0).**

Examination of the political and military factors necessary for consideration in the development of a successful Western strategy for the defense of Asia.

**NS3279 DIRECTED STUDIES IN NATIONAL SECURITY AFFAIRS (Credit open) (V-0).**

Format and content vary. Normally involves extensive assigned readings, individual discussions with the instructor, papers and/or examinations.

**NS3280 NUCLEAR WEAPONS AND FOREIGN POLICY (4-0).**

An interdisciplinary course which covers both the technology and political influences of nuclear weapon systems with the foreign policies of the major powers and the political blocs from 1945 to the present.

**NS3300 FOUNDATIONS OF MIDDLE EASTERN POLITICS: PEOPLE, SOCIETIES, CULTURES AND RELIGIONS (4-0).**

An intensive course in Middle Eastern history from the viewpoint of geographical and military factors which have shaped the course of events in the area. The geographic (including oceanographic) environment within which military campaigns have been

conducted, which continues to present military problems, is examined. Indigenous and foreign techniques and tactics for dealing with this environment, as well as the historical development of Middle Eastern military organizations are studied.

**NS3310 PROBLEMS OF GOVERNMENT AND SECURITY IN THE MIDDLE EAST (4-0).**

An introductory course in Middle Eastern society and politics designed to provide the maximum background area knowledge to be utilized in follow-on courses in Middle Eastern politics.

**NS3320 INTERNATIONAL RELATIONS AND SECURITY IN THE MIDDLE EAST (4-0).**

The course focuses on selected problems affecting American security interests in the Middle East: Strategic waterways, including the Suez Canal, the Turkish Straits, and the Indian Ocean; the politics and problems of access to the area's oil resources; the development of U.S. and Soviet policies toward area. The foregoing problems will be set in the context of regional international politics.

**NS3330 UNITED STATES INTERESTS AND POLICIES IN THE MIDDLE EAST (4-0).**

This course offers an analysis of the historical backgrounds and the current status of United States cultural, economic, political and strategic interests in the Middle East. It traces the changing definitions of these interests over time and the alternative policies which have been adopted in order to secure them. The relationship of these policies to broader aspects of United States foreign policy is discussed along with the impact of the policy-making process upon the substance of policies.

**NS3350 THE MIDDLE EAST: THE MILITARY DIMENSION (4-0).**

An examination of the political, sociological, cultural and strategic roles of the military in Middle Eastern history and politics. Among the topics considered are: traditional military patterns, military recruitment, organization doctrine, and learning experiences.

**NS3360 NORTH AFRICA: PROBLEMS OF GOVERNMENT AND SECURITY IN THE MAGHREB (4-0).**

This course is designed to extend the student's knowledge of selected North African and Red Sea littoral countries, and to provide some insight into the security problems presented by their domestic politics. In addition, some coverage of central African countries will be included.

**NS3361 PROBLEMS OF GOVERNMENT AND SECURITY IN ISRAEL (4-0).**

Israeli cultural, social, and political patterns: Hebraic traditions, Zionism and the creation of Israel, institutional and sociological frameworks for Israeli politics, elite recruitment, perceptions and strategic orientations, security issues in Israeli domestic and foreign policy. **PREREQUISITES:** NS 3310 or NS 3320, or their equivalent.

**NS3362 PROBLEMS OF GOVERNMENT AND SECURITY IN THE NORTHERN TIER: TURKEY, IRAN, AFGHANISTAN, PAKISTAN (4-0).**

An examination of internal and external political, economic, and social forces in the major non-Arab Middle Eastern states as reflected in their internal development and international policies. Cooperation and conflict in the behavior of these nations toward each other will be explored in the context of their recent efforts at regional cooperation and regional organization (the Sadabad Pact, Cento, and RCD). Examination of

their relationships to the major outside powers interested in the area, i.e., the U.S. and the Soviet Union. Their relationships both as individual states and as sub-region with the Arab states of the Middle East. **PREREQUISITES:** NS 3310 and NS 3320.

**NS3400 DOMESTIC CONTEXT OF SOVIET NATIONAL SECURITY POLICY (4-0).**

An examination of the role of domestic factors shaping Soviet international conduct, including historical influences, ideology, political and economic systems, nationalities and political culture.

**NS3410 SOVIET NATIONAL SECURITY (4-0).**

A follow-up course to NS 3400. Examination of the evolution of Soviet national security policy. Introductory part of the course deals with pre-World War II roots of Soviet national security policy and evolution of Soviet national security decision-making. The main part of the course deals with Soviet national security policy from the end of World War II to the present, with special emphasis on US-Soviet relations, relations between the USSR and China, and Soviet use of force in Eastern Europe and the Third World (Middle East, Angola, Ethiopia, Afghanistan). **PREREQUISITE:** NS 3400 or consent of instructor.

**NS3450 SOVIET MILITARY STRATEGY (4-0).**

Examination of international and external factors conditioning Soviet military doctrine and strategy and their development through the Stalin, Khrushchev and Brezhnev eras and beyond. Emphasis is on contemporary Soviet strategic concepts and strategy: surprise and deception, war-fighting capabilities,

external role of the Soviet armed forces, strategy for nuclear war, Warsaw Treaty Organization strategy, and Soviet naval strategy in the Third World.

**NS3452 THE NAVY IN SOVIET STRATEGY (4-0).**

Examination of the roles played by the Soviet Navy, Merchant Marine, fishing fleet, and Oceanological establishment in securing the objectives of the Soviet Government. Topics include: geographic factors affecting Soviet ocean strategies; non-naval strategy trends; international and domestic factors affecting post-1953 naval strategy, development of Soviet naval warfare capabilities; doctrinal and functional analysis of post-1953 trends in naval strategy; command structure; personnel training; law of the sea positions; U.S.-Soviet naval interaction. **PREREQUISITE:** NS 3450 or permission of instructor and SECRET clearance.

**NS3460 PROBLEMS OF GOVERNMENT AND SECURITY IN EASTERN EUROPE (4-0).**

This course analyzes the political, economic, national security and international affairs of the communist-ruled states of Europe other than the Soviet Union.

**NS3500 PERSPECTIVES ON AMERICAN CIVILIZATION (4-0).**

This course, especially designed for the foreign area studies (attache) program, is an interdisciplinary study of American culture, involving the political economic, social, philosophical and literary development of the Nation from 1789 to the present.

**NS3501 HISTORY AND CULTURE OF LATIN AMERICA (4-0).**

Identifies those aspects of the heritage most relevant to understanding contemporary conditions in Latin America, from pre-Columbian Indian traditions and Iberian

colonial patterns through the independence movements of the early 19th century and the global economic relationships which re-oriented the region toward Northwestern Europe and the United States.

**NS3510 PROBLEMS OF GOVERNMENT AND SECURITY IN LATIN AMERICA (4-0).**

Considers the nature of political legitimacy in Latin America. Comparative studies indicate the relative role of revolutionary movements, constitutionalism, and economic output as sources of social cohesion. Major political factors such as technocrats, organized labor, the church, political parties and the military are studied in reference to how they respond to demand for radical change. Critical analysis of government capacity to meet challenges indicates the degree to which countries in the region face a significant likelihood of instability stemming from internal and/or external sources. Specific countries are given attention based on the future assignments of the students.

**NS3520 INTERNATIONAL RELATIONS AND SECURITY PROBLEMS OF LATIN AMERICA (4-0).**

Surveys the attempts by countries from various parts of the world - including the Soviet bloc - to penetrate Latin America. The influences of cultural and economic ties, military sales and political subversion have created links between Latin America and Europe with an undercurrent of African relations. The activities coming from outside the region are evaluated in comparison with the efforts of Latin American states to gain diplomatic influence in global organizations and to establish economic links to serve development goals.

**NS3530 UNITED STATES INTERESTS IN LATIN AMERICA (4-0).**

A critical look at Latin America, and at the case made by analysts who argue that U.S. policy has neglected the region as compared

with that of the critics of U.S. influence. Traditional views of neighbors sharing a common heritage and geo-political interest are evaluated. The importance of cultural, economic, and military views are considered in the context of American global economic and security concerns.

**NS3540 POLITICAL ECONOMY OF LATIN AMERICAN DEVELOPMENT STRATEGIES (4-0).**

Examination of the forces affecting the interface of economic and political interests in development strategies, especially since the end of World War II. The objectives sought, obstacles encountered, and means utilized are evaluated. External and internal factors are compared in reference both to measurable contributions and to the perceptions of Latin American leaders.

**NS3550 THE ROLE OF THE MILITARY IN LATIN AMERICA (4-0).**

A broad view of the variety of functions served by the military in Latin American societies. Many Latin American military organizations have had training and advisory links with several countries from the outside region. A number of countries have also developed comprehensive doctrines of both military and other activities as part of research and training at advanced staff schools. Some have overseas combat experience, while many have been involved in internal security operations. These factors are considered by this course along with inter-service and civil-military relations.

**NS3600 GEOGRAPHY, HISTORY AND CULTURES OF ASIA (4-0).**

An introduction to Asia. This basic course addresses the peoples of Asia and their cultures, civilizations, social organization, economic, political and military development before the coming of Europeans. This course is a prerequisite for the advanced courses on Asia.

**NS3620 INTERNATIONAL CONFLICTS OF ASIA TO WORLD WAR II (4-0).**

An analysis of the impact of the West on the peoples of Asia, showing the historical roots of many contemporary conflicts of policy.

**NS3630 FOUNDATIONS OF U.S. POLICY IN ASIA (4-0).**

A study of 19th and early 20th century U.S. interests and policy toward Asia. Focuses on the emergence of Asian affairs as an issue for American policy-makers and the public from the U.S. revolution through World War II. Emphasis is placed on trading Asian-American political, economic, strategic, and cultural interaction as it influenced U.S. policy and the policies of key Asian states.

**NS3631 U.S. SECURITY INTERESTS AND POLICIES IN ASIA SINCE WORLD WAR II (4-0).**

A study of the national interests of the United States in East Asia, South Asia and adjacent oceans from World War II to the present. The development of hostilities in Korea and Vietnam and their aftermath. Evaluation of relations with the new Japan, the PRC and Taiwan, and the independent nations of Asia, produced by the breakup of traditional empires.

**NS3661 PROBLEMS OF GOVERNMENT AND SECURITY IN CHINA (4-0).**

The rise of the Chinese Communist Party and the establishment of the Communist state; its domestic achievements and problems; the special problem Taiwan; changing foreign policies and the current role of the Peoples Republic of China in world affairs.

**NS3662 PROBLEMS OF GOVERNMENT AND SECURITY OF CONTEMPORARY JAPAN (4-0).**

The place of Japan in the modern world; an examination of Japan's political dynamics, economic evolution, social transformation, the National Self Defense Forces and alternatives for providing for national security.

**NS3663 PROBLEMS OF GOVERNMENT AND SECURITY OF CONTEMPORARY KOREA (4-0).**

Division of the Korean nation into two states; the aftermath of Korean war; domestic political, economic and social problems of North Korea and South Korea; the prospects for reunification; the military balance and the changing strategic environment; the relations of Pyongyang and Seoul, with their key allies.

**NS3667 PROBLEMS OF GOVERNMENT AND SECURITY IN SOUTH ASIA, SOUTHEAST ASIA, AND OCEANIC REGIONS (4-0).**

Internal problems and foreign relations among the states in the region of South Asia, Southeast Asia, Australia, New Zealand, and Melanesia. Strategic interests of the major powers and importance of Indian Ocean and Southwestern Pacific ocean area to superpowers and nations of the region

**NS3700 HISTORY OF EUROPE AND RUSSIA, PRE-1917 (4-0).**

Review and analysis of the political and military history of Europe, including Russia, from the Congress of Vienna to the outbreak of World War I.

**NS3701 HISTORY OF EUROPE AND THE USSR, POST-1917 (4-0).**

This course continues the narrative and analysis begun in NS3700, bringing the student from World War I and the Bolshevik Revolution to the conclusion of World War II.

**NS3710 PROBLEMS OF GOVERNMENT AND SECURITY IN CONTEMPORARY WESTERN EUROPE (4-0).**

Review and analysis of the history of Western Europe since 1945, including an introduction to the institutions of the European Economic Community and the North Atlantic Treaty Organization. Emphasis is on the political systems and security policies of Britain, France, Italy, and the Federal Republic of Germany.

**NS3720 INTERNATIONAL RELATIONS AND SECURITY PROBLEMS OF THE NORTH ATLANTIC ALLIANCE (4-0).**

The origins and evolution of NATO in relation to the provided threat from the East and the postwar recovery of Europe. Problems of strategy, force posture, alliance cohesion, nuclear policy and the differing interests of NATO states. Current issues facing the alliance and their relation to U.S. foreign and defense policy.

**NS3765 PROBLEMS OF GOVERNMENT AND SECURITY ON NATO'S FLANKS (4-0).**

Introduction to the security problems in the Mediterranean and Scandinavian Baltic regions and the naval role on the flanks of NATO.

**NS3766 PROBLEMS OF GOVERNMENT AND SECURITY IN THE NATO CENTER (4-0).**

Examination of political, economic, social and security problems, post-World War II history, and central foreign policy problems faced by the Federal Republic of Germany and France.

**NS3900 INTERNATIONAL ORGANIZATIONS AND NEGOTIATION (4-0).**

The first part of the course traces the evolution of international organizations from the Concert of Europe, through the League of

Nations, United Nations, European Economic Community, NATO, and various current forms of multi-national and transnational organizations. The emphasis is on policy-making in these organizations. The second part of the course is an analysis of international negotiations, with emphasis on applying theories of negotiations to such issues as Law of the Sea and Arms Control.

**NS3902 MODERN REVOLUTION AND POLITICAL TERRORISM (4-0).**

Study of the general historical framework of modern revolution to include systematical analysis of the development of modern revolutionary situations. Examination of the more important revolutions of modern times, including study of the historical events, testing of the methods of systematic analysis, with emphasis on revolutionary tactics, e.g., political terrorism.

**NS3960 INTERNATIONAL LAW AND THE LAW OF WAR (4-0).**

An introduction to the principles of international law including origins, sources, sovereignty, states, territory, jurisdiction, persons, treaties, settlement of disputes, and the Law of the Sea. The law of war is analyzed as it is to be observed and enforced by the Armed Forces of the United States. Special attention is paid to the 1949 Geneva Convention, the Navy's Law of Naval Warfare and the Army's Law of Land Warfare.

**NS3962 OCEAN, MARITIME AND TORT LAW FOR THE HYDROGRAPHIC COMMUNITY (4-0).**

This course is designed to provide a detailed introduction to the personal and institutional liabilities and immunities of the hydrographic community. As such, it will consist of a general introduction to governmental tort law, including the applicable sections of the Federal Tort Claims Act and pertinent cases; relevant areas of Admiralty law and international law, both public and private, as it applies to the rights and duties

pertaining to access to, and use of both international and sovereign waters. In addition, special emphasis will be given to the historical and legal developments of the law of the sea; and to present day trends in international conventions leading up to the law of the Sea Treaty.

Graduate Courses

**NS4010 SEMINAR IN COMPARATIVE REGIONAL SECURITY (4-0).**

A seminar designed for geographical security area students to address global security issues on a comparative basis. PREREQUISITES: NS 3310, 3410, 3630, 3710 or 3810.

**NS4020 SEMINAR IN COMPARATIVE FOREIGN POLICY (4-0).**

The objective of this Seminar is to develop the student's ability to analyze and predict the international behavior of states. Emphasis will be placed on comparing the impact of different factors such as international structure, domestic politics, bureaucratic institutions, economic resources and ideology, on the foreign policies of different countries. Students will be expected to write a seminar paper using the theoretical material covered in the course to compare the foreign policies of two or more countries. PREREQUISITE: NS 3020 or permission of the instructor.

**NS4030 SPECIAL TOPICS IN NATIONAL SECURITY POLICY (4-0).**

Advanced study and research in special topics and issues related to national security policy. Topics may include policy outputs such as foreign trade, public diplomacy, deterrence, low-intensity conflict, etc., or aspects of the policy making process such as the role of Congress, public opinion and the press, bureaucratic politics, etc. The seminar is used to examine topics not covered in depth in other seminars. PREREQUISITE: Permission of the instructor. Graduated on a Pass/Fail basis only.

**NS4040 STRATEGIC RESOURCES AND U.S. NATIONAL SECURITY POLICY (4-0).**

Analysis of the problems of access to global resources and their utilization: agricultural production access to critical raw materials; problems and policies of oil; national and international implications of various strategies of self-sufficiency and interdependency. Emphasis is placed on the security problems arising from the geographic distribution of international resources. PREREQUISITES: NS 3030, NS 3020.

**NS4041 ECONOMICS OF THIRD WORLD MILITARY EXPENDITURES (4-0).**

A comparative analysis of problems of politic-economic growth and development, focusing on selected developing nations. Alternate systems are compared with respect to development goals, theories of economic organizations, institutions and development processes. Emphasis is placed on forecasts of likely changes in economic and political conditions and their effect on the political-military situation in each country. PREREQUISITE: NS 3040 or consent of instructor.

**NS4042 NATIONAL SECURITY AND TECHNOLOGY TRANSFER (4-0).**

Examines patterns of East-West Trade, U.S. policies regarding technology transfer to the Eastern bloc. PREREQUISITE: NS 3040 or consent of instructor.

**NS4050 GAMING AND SIMULATION LAB FOR NATIONAL SECURITY AFFAIRS (Credit Open) (0-V)**

Description and operation of the RAND Strategy Assessment System (RSAS), to include the general architecture of the system, nature of the models, and the many variables that can be controlled. The methodology involved in defense analysis at the

NCL, JCS, and CINC levels for joint and combined operations will be covered. Students will participate in sessions in the WARLAB using the RSAS to conduct experiments in sensitivity analysis, net assessment, strategic planning, threat assessment, and high level gaming. Hands-on experience will be provided as appropriate on this state of the art system. The course is designed to primarily support thesis research. **PREREQUISITES:** Any introductory microcomputer course. SECRET clearance, U.S. citizenship, U.S. military or U.S. government employees.

**NS4079 ADVANCED DIRECTED STUDIES IN NATIONAL SECURITY AFFAIRS (Credit open) (V-0).**

Format and content vary. Normally involves extensive individual research under direction of the instructor and submission of a substantial paper of graduate seminar quality and scope.

**NS4152 PROBLEMS OF INTELLIGENCE AND THREAT ANALYSIS (4-0).**

This advanced course focuses on problems in analyzing the intentions and capabilities of a military competitor, especially the Soviet Union. This course is specifically intended to draw on the knowledge and experience of practitioners and analysts in the Naval intelligence community. Students will be given the opportunity to undertake analyses where they apply methods and concepts acquired in earlier courses. **PREREQUISITE:** NS 3150 or NS 3154 or permission of the instructor. TOP SECRET clearance with eligibility for SPECIAL INTELLIGENCE information.

**NS4179 ADVANCED DIRECTED STUDIES: INTELLIGENCE (Variable).**

Format and content vary. Normally involves extensive individual research under the direction of the instructor and submission of a substantial paper of graduate quality and scope.

**NS4220 THREAT ANALYSIS AND THE CONTEMPORARY INTERNATIONAL ENVIRONMENT (4-0).**

An appreciation for other threats to U.S. interests and those of its allies including; Muslim fundamentalism, the Arab/Israeli conflict the Persian Gulf and Southwest Asia, threats to the Pacific Rim including Philippine insurgency, North Korea, Vietnam, Central and South American instability, and Africa. Functional threats will also be examined; technological breakthroughs, chemical and biological warfare, as well as the military uses of space. Graded on a Pass/Fail basis only.

**NS4230 SEMINAR IN STRATEGIC PLANNING (4-0).**

Advanced study in the concept and methods of strategic planning and analysis, particularly with respect to iterative aggregation and synthesis in the Military Departments, the Joint Chiefs of Staff, the Office of the Secretary of Defense, the Department of State, the National Security Council/White House, and the Congress. Students are expected to research and report on a major strategic issue/strategic planning process/case study which has/had a significant long-term impact. **PREREQUISITES:** SECRET Clearance and NS 3230 or consent of the instructor.

**NS4231 SCIENCE, TECHNOLOGY AND PUBLIC POLICY (4-0).**

Advanced study and research in the role of science and technology in the formulation and conduct of U.S. national policy, to include interactions among scientific communities, government and the military services. A research focus will be determined for each course. **PREREQUISITE:** Consent of the instructor.

**NS4250 PROBLEMS OF SECURITY ASSISTANCE AND ARMS TRANSFER (4-0).**

An analysis of the patterns, purposes and effects of cross-national security assistance, including arms sales and the transfer of technology. Special topics include: factors dominating the arms transfer policies of the major powers; the role of the military attache; the design, execution and evaluation of security assistance programs. **PREREQUISITE:** NS 3030 or NS 3020.

**NS4251 AMERICAN NATIONAL SECURITY OBJECTIVES AND NET ASSESSMENT (4-0).**

Comparative analysis of trends in U.S. and Soviet security policies, military forces, manpower, and capabilities. Special attention is paid to familiarizing students with original source material and major elements in current controversial national security issues. Topics covered include nuclear capabilities and doctrine, BMD and air defense, civil defense, combined arms employment, NATO Warsaw Pact military balance, naval forces, and trends in the U.S. and Soviet economies, especially as they may affect the allocation of resources to defense. **PREREQUISITE:** TOP SECRET clearance with eligibility for SPECIAL INTELLIGENCE information.

**NS4261 SURVEY OF STRATEGIC STUDIES (4-0).**

An extensive survey of the classical and contemporary literature on strategic thinking; national objectives and strategic alternatives; deterrence, counterforce, arms control, counter insurgency, compellence; components and rules of the international strategic system; arms competitions, nuclear proliferation, terrorism. Student projects on current strategic problems are a major component of the course. **PREREQUISITE:** NS 3020.

**NS4279 ADVANCED DIRECTED STUDIES: STRATEGIC PLANNING (Variable).**

Format and content vary. Normally involves extensive individual research under direction of the instructor and submission of a substantial paper of graduate seminar quality and scope.

**NS4280 ADVANCED TOPICS IN NUCLEAR STRATEGY AND DETERRENCE (4-0).**

A follow-up course to NS 3280 that examines advanced issues in nuclear strategy, strategic and crisis stability, and deterrence. In addition to advanced theoretical issues of deterrence, this course will specifically investigate the role and importance of nuclear force planning and strategy formulation in deterrence, stability, and foreign policy implementation. Some of this analysis will be done using both static measurement models and dynamic computer nuclear exchange modeling. **PREREQUISITE:** NS 3280 or permission of the instructor; SECRET clearance.

**NS4290 SEMINAR ON THE ORIGINS OF SOVIET AMERICAN RELATIONS (4-0).**

This course examines the origins of contemporary U.S. and Soviet military and political relationships and focuses on the 1945 to 1963 time period. Topics covered include theories of the Cold War (including orthodox, revisionist, post-revisionist, and neo-orthodox), Allied wartime diplomacy and contrasting post-war objectives, Cold War alliance strategies, formulation of American post-war foreign policy, Soviet perspectives on the origins of U.S.-Soviet antagonisms, as well as decolonization and the Cold War in Asia and the Near and Middle East. **PREREQUISITE:** NS 3030 or consent of the instructor.

**NS4300 SEMINAR IN MIDDLE EAST-ERN CIVILIZATION (4-0).**

Description and analysis of the four major cultural traditions of the Middle East: Arabic, Persian, Judaic, and Turkish. Students read translations of selected classical and contemporary writings from each of these traditions, and secondary materials concerning social and cultural institutions. **PREREQUISITES:** NS 3310 or NS 3300, or consent of instructor.

**NS4310 SEMINAR IN SECURITY PROBLEMS OF THE MIDDLE EAST (4-0).**

Advanced Middle Eastern politics and the security problems they present to the U.S. decision-makers. The central theme of the course is U.S. interests in the Middle East, how these interests are threatened, and what policy alternatives have been proposed to secure them. **PREREQUISITE:** NS 3310 or NS 3320.

**NS4410 SEMINAR: SECURITY PROBLEMS OF THE SOVIET UNION AND WARSAW TREATY ORGANIZATION (WTO) (4-0).**

This advance seminar addresses the whole complex of security problems of the Soviet Union and her WTO Allies. The issues include domestic determinants (political culture, economy, etc.) of Soviet and Warsaw Pact international conduct, Soviet conduct within the Sino-Soviet-American triangle, arms control and Soviet military strategy within the context of Soviet-West European relations, problems of Soviet control over and political stability in Eastern Europe, reliability of East European armed forces, Soviet relations with Vietnam and Cuba, and Soviet involvement in Third World conflicts (Afghanistan and Angola). **PREREQUISITES:** NS 3400, NS 3410 and NS 3450 or consent of the instructor.

**NS4451 ADVANCED TOPICS IN SOVIET NAVAL AFFAIRS (4-0).**

Advanced study and research in Soviet naval and maritime affairs. Topics include: decision-making processes, scenarios, warfare capabilities and support systems, missions methodology, gaming, and U.S. Soviet naval interactions. **PREREQUISITE:** NS 3452, TOP SECRET clearance with eligibility for SPECIAL INTELLIGENCE information, or permission of instructor.

**NS4500 SEMINAR IN THE NATIONAL INTEREST (4-0).**

An advanced study of the underlying assumptions and objectives of American security and foreign policy. The core of the course is an in-depth analysis of the American national interest in the international context. Students are required to write a major seminar paper on American national interests in a specific country or region.

**NS4510 SEMINAR IN GOVERNMENT AND POLITICS IN LATIN AMERICA (4-0).**

This seminar will consist of intensive readings of advanced topics in Latin American politics and government, including the interplay between economic, political, military, and social factors in the process of political change at play in the region. Students will be required to prepare classroom lectures on selected subjects and present an article length paper on a separate topic. Reading assignments will be extensive, which presupposes a significant level of knowledge and preparation prior to the course. **PREREQUISITES:** NS 3510, 3520, 3540 and 3550.

**NS4560 SEMINAR IN INTERNATIONAL SECURITY PROBLEMS OF LATIN AMERICA (4-0).**

Reviews the history of Latin America as part of an inter-American system, and the case of joint foreign policy action on econom-

ic, political, and military fronts. Case studies draw attention to the role of the United States in the region, both within the formal regional institutions and in bilateral relations including military advisor activities. The relations are put in the context of the attitudes of Latin American leaders toward hemispheric solidarity.

**NS4660 ASIA AND SOVIET UNION (4-0).**

An advanced study of the interests and policies of the Soviet Union in Asia and the adjacent oceans, with special reference to the impact of Soviet expansiveness on the policies of the United States, China, Japan and other Asian states. This course is open both to Soviet and Asian area specialists.

**NS4690 INTERNATIONAL SECURITY PROBLEMS OF ASIA AND THE ADJACENT OCEANS (4-0).**

Advanced study of Asian security issues with special emphasis on the balance of forces, regional and external alliances, prospects for conflict, and Asian concepts of security and strategy. **PREREQUISITE:** Consent of instructor.

**NS4710 SEMINAR IN POLITICAL AND SECURITY PROBLEMS OF EUROPE (4-0).**

A research seminar on political and security issues in contemporary Europe. Students conduct and present original research on a selected issue, or related issues, in specific European countries or sub-regions. The issue around which the seminar is structured varies from term to term. It is chosen to meet the research interests of each group of students enrolled in the course.

**NS4720 SEMINAR IN SOVIET-EUROPEAN RELATIONS (4-0).**

A seminar intended to deepen the student's knowledge of current issues in Soviet and European affairs.

**NS4900 SEMINAR IN INTERNATIONAL NEGOTIATIONS (4-0).**

Advanced study and research in the international negotiating process, designed to provide students with an opportunity to analyze specific topics related to negotiating national security.

**NS4901 SEMINAR IN OCEAN POLICY. (4-0).**

An advanced consideration of ocean policy issues and problems. Emphasis in on legal, political, military, and oceanographic matters in the context of the Law of the Sea and the new U.S. National Oceans Policy.

**NS4902 SEMINAR ON MODERN REVOLUTION AND TERRORISM (4-0).**

A research seminar on modern revolution and terrorism. Students will be introduced to the general sources of information and accomplish the research necessary to complete a seminar paper in a related area of their choice. **PREREQUISITE:** NS 3902.

**NS4950 SEMINAR IN ARMS CONTROL AND NATIONAL SECURITY (4-0).**

An analysis of international negotiation processes as related to the control of armaments, including a review of the history of modern arms control efforts, examination of the domestic political context of arms limitation, the implications of international law relevant to treaty negotiations, ratification and enforcement, the intellectual contributions of scientists to the development of arms control theory, and a review of selected substantive issues with respect to security concerns, verification capabilities and compliance measures. **PREREQUISITES:** NS 3450 and 3900 or consent of instructor and **SECRET** clearance.

## DEPARTMENT OF OCEANOGRAPHY

- Curtis Allan Collins**, Chairman and Professor (1987)\*; PhD, Oregon State University, 1967.
- Mary Louise Batteen**, Associate Professor (1985); PhD, Oregon State University, 1984.
- Robert Hathaway Bourke**, Professor (1971); PhD, Oregon State University, 1972.
- Ching-Sang Chiu**, Assistant Professor (1988); ScD, Massachusetts Institute of Technology and Woods Hole Oceanographic Institution, 1985.
- Pecheng Chu**, Adjunct Research Professor (1986); PhD, University of Chicago, 1985.
- Nicholas Dodd**, Adjunct Research Professor (1987); PhD, University of Bristol, 1987.
- Arne Foldvik**, Adjunct Research Professor (1988); PhD, University of Bergen, 1968.
- Roland William Garwood**, Professor (1976); PhD, University of Washington, 1976.
- Jean-Claude Gascard**, Adjunct Research Professor (1988); PhD, University of Paris, 1977.
- Eugene Clinton Haderlie**, Adjunct Distinguished Professor Emeritus (1965); PhD, University of California at Berkeley, 1950.
- John Hannah**, Adjunct Research Professor (1988); PhD, Ohio State University, 1982.
- Glenn Harold Jung**, Professor Emeritus (1958); Texas A & M University, 1955.
- Dale Fredrick Leipper**, Professor Emeritus (1968); PhD, Scripps Institution of Oceanography, 1950.
- Jeffrey Aaron Nystuen**, Assistant Professor (1986); PhD, Scripps Institution of Oceanography, 1985.
- Robert George Paquette**, Adjunct Professor Emeritus (1971); PhD, University of Washington, 1941.
- Steven Richard Ramp**, Assistant Professor (1986); PhD, University of Rhode Island, 1986.
- Felix Michael Reynolds**, Commander, U.S. Navy, Instructor (1989); MS, Naval Postgraduate School, 1976.
- Leslie K. Rosenfeld**, Adjunct Research Professor (1989); PhD, Woods Hole Oceanographic Institution, 1987.
- Kurt John Schnebele**, Commander, NOAA, Instructor (1987); MS, Naval Postgraduate School, 1979.
- Albert Julius Semtner**, Professor (1986); PhD, Princeton University, 1973.
- David Clement Smith, IV**, Assistant Professor (1985); PhD, Texas A & M University, 1980.
- Timothy Peter Stanton**, Adjunct Research Professor (1978); MS, University of Auckland, 1977.
- Warren Charles Thompson**, Professor Emeritus (1953); PhD, Texas A & M University, 1953.
- Edward Bennett Thornton**, Professor (1969); PhD, University of Florida, 1970.
- Eugene Dewees Traganza**, Professor Emeritus (1970); PhD, University of Miami, 1966.
- Stevens Parrington Tucker**, Assistant Professor (1968); PhD, Oregon State University, 1972.
- Joseph John von Schwind**, Associate Professor (1967); PhD, Texas A & M University, 1968.
- Jack B. Wickham**, Professor Emeritus (1951); MS, Scripps Institution of Oceanography, 1949.
- Chung-Shang Wu**, Adjunct Research Professor (1983); PhD, Cornell University, 1983.

\*The year of joining the Postgraduate School Faculty is indicated in parentheses.

**Chairman:**

Curtis A. Collins, Professor,  
Code 68Co, Spanagel Hall, Rm. 350,  
(408) 646-2673, AV 878-2673.

**Associate Chairmen:****Research:**

Edward B. Thornton, Professor,  
Code 68Tm, Spanagel Hall, Rm. 327,  
(408) 646-2847, AV 878-2847.

**Instruction:**

Roland W. Garwood, Jr., Professor,  
Code 68Gd, Spanagel Hall, Rm. 308,  
(408) 646-3260, AV 878-3260.

**Mapping, Charting and Geodesy:**

Joseph J. von Schwind, Assoc. Prof.,  
Code 68Vs, Bldg. 224, Room 106,  
(408) 646-3271, AV 878-3271.

The Oceanography Department primarily supports curricula sponsored by the Oceanographer of the Navy; viz, #373 Air-Ocean Science, #374 Operational Oceanography, #440 Oceanography, #441 Mapping, Charting, and Geodesy.

The department focuses on Physical Oceanography including courses in Mapping, Charting and Geodesy (MC&G) in accordance with naval priorities.

In Physical Oceanography topics include ocean dynamics, numerical ocean circulation modeling, satellite remote sensing of the ocean, air-sea interaction, Arctic oceanography, upper ocean dynamics and thermodynamics, near-shore processes, mesoscale dynamics, synoptic/mesoscale ocean prediction, coastal ocean circulation, and environmental acoustics. The MC&G program includes hydrographic surveying, electronic navigation, marine geodesy, photogrammetry, marine geophysics (bathymetry, gravity, magnetics), naval astronomy and precise time. The department also provides core courses for

Naval Intelligence, ASW, engineering acoustics and the space curricula.

The Mapping, Charting and Geodesy Curriculum has International Hydrographic Organization-International Federation of Surveyor Category A Certification.

### MASTER OF SCIENCE IN PHYSICAL OCEANOGRAPHY

Entrance to a program leading to the degree Master of Science in Physical Oceanography requires a baccalaureate degree. Minimal requirements include mathematics through differential and integral calculus, and one year of calculus-based physics.

The degree of Master of Science in Oceanography requires:

a. Completion of at least eight physical oceanography graduate courses, with at least four courses in the OC 4000 series. The entire sequence of courses selected must be approved by the Department of Oceanography. Significant educational experience at sea on a research vessel is required for the degree. (OC 3570 satisfies this requirement).

b. Completion of an acceptable thesis on a topic approved by the Department of Oceanography.

### MASTER OF SCIENCE IN HYDROGRAPHIC SCIENCES

Entrance to a program leading to the degree Master of Science in Hydrographic Sciences requires a baccalaureate degree. Minimal requirements include mathematics through differential and integral calculus and one year of calculus-based physics.

The degree of Master of Science in Hydrographic Sciences requires:

a. Completion of forty quarter hours of graduate courses in the GH series of which twelve hours must be at the 4000 level. The entire sequence of

courses must be approved by the Department of Oceanography. Significant educational experience at sea on a research vessel is required for the degree. (GH 3910 and GH 3911 satisfy this requirement).

b. Completion of an acceptable thesis on a topic approved by the Department of Oceanography.

### **MASTER OF SCIENCE IN METEOROLOGY AND PHYSICAL OCEANOGRAPHY**

Direct entrance to a program leading to the degree Master of Science in Meteorology and Physical Oceanography requires a baccalaureate degree in one of the physical sciences, mathematics, or engineering. This normally permits the validation of a number of required undergraduate courses such as physics, differential equations, linear algebra, vector analysis, and various courses in meteorology and/or oceanography, which are prerequisites to the graduate program. These prerequisites may be taken at the Naval Postgraduate School; however, in that event the program may be lengthened by one or more quarters.

The degree of Master of Science in Meteorology and Physical Oceanography requires:

a. Completion of forty-eight quarter hours in meteorology and oceanography, to include at least twenty hours in the 4000 series, in other than directed study.

b. The basic sequence of graduate courses in the fields of dynamical, physical and synoptic meteorology/oceanography must be included in the forty-eight hours.

c. A significant and educational experience at sea on a research vessel.

d. Completion of an acceptable thesis on a topic approved by either department.

### **DOCTOR OF PHILOSOPHY**

Department of Oceanography admission requirements for the degree of Doctor of Philosophy include:

a. A Master's degree (or the equivalent) in one of the physical sciences, mathematics, or engineering or

b. A Bachelor's degree with a high QPR or

c. A highly successful first graduate year in a Master's program, with clear evidence of research ability.

The PhD Program is in Physical Oceanography, including areas of study in ocean circulation theory, air-sea interaction, ocean acoustics, and nearshore oceanography among others.

To undertake doctoral work in oceanography, a student must apply to the Chairman, Department of Oceanography. A copy of the Oceanography PhD Program Guidelines is available from the Department of Oceanography, which should be followed.

### **OCEANOGRAPHIC LABORATORIES**

NPS is an Associate Member of UNOLS (University National Oceanography Laboratory System) and a full member of CENCAL (Central California Cooperative). UNOLS operates the Nation's academic oceanographic research fleet, while CENCAL promotes and coordinates research vessel operations between several academic institutions in Central California. The nearby Moss Landing Marine Laboratory operates the NSF-owned 135-foot R/V POINT SUR for the benefit of CENCAL, with NPS a major user.

A Physical Ocean Observation Laboratory (POOL) provides for instruction in the practical design, deployment and recovery of state-of-the-art oceanographic instrumentation. Real-time observations of currents, temperature, salinity, and sound velocity structure in a variety of oceanic re-

gimes are analyzed, applying theoretical and mathematical techniques learned in the classroom to Naval Oceanography problems.

NPS is also a member of UCAR (University Corporation for Atmospheric Research), which serves some of the computational and other research facility needs of the oceanographic community. Together with the Meteorology Department, the Oceanography Department operates the Interactive Digital Experimental Analysis Laboratory (IDEA), that is equipped with several workstations for the analysis of satellite images or other digital fields, e.g., numerical model output. In addition, the Department operates a 14-terminal color graphics instructional laboratory for simulation and analysis of oceanographic data.

### DEPARTMENT COURSE OFFERINGS

#### OCEANOGRAPHIC SCIENCES

#### OC0110 APPLICATION SEMINARS (1-0).

Presentation of DOD related research activities, applications to weapons and warfare systems, utilization of oceanography and meteorology in specific billets, presentations by faculty, staff, selected students, visiting authorities. OC 0110 is for orientation. PREREQUISITE: Enrollment in an Air/Ocean Sciences curriculum.

#### OC0111 APPLICATIONS SEMINARS (1-0).

Presentation of DOD related research activities, applications to weapons and warfare systems, utilization of oceanography and meteorology in specific billets, presentations by faculty, staff, selected students, visiting authorities. OC 0111 is for intermediate students. PREREQUISITE: Enrollment in an Air/Ocean Sciences curriculum.

#### OC0810 THESIS RESEARCH (3-0).

Every student conducting thesis research will enroll in this course.

#### OC0999 THESIS SEMINARS (2-0).

Students in various oceanography curricula present their theses for discussion. PREREQUISITE: Preparation of a thesis. Graded on Pass/Fail basis only.

#### Upper Division Courses

#### OC2001 OCEAN SYSTEMS (4-0).

This course is designed to support the Naval Intelligence Curriculum by providing an overview of significant oceanographic factors, data networks and their products, sound propagation in the ocean, active and passive sonar, and ocean vehicle design practices.

#### OC2020 COMPUTER COMPUTATIONS IN AIR-OCEAN SCIENCES (1-2).

Introduction to FORTRAN, and the NPS mainframe computer, as applied to elementary problems in oceanography and meteorology. PREREQUISITES: Calculus and college physics.

#### OC2120 SURVEY OF OCEANOGRAPHY (4-0).

An integrated view of the whole field of oceanography including physical, biological, geological and other chemical aspects. PREREQUISITES: None.

#### OC2520 SURVEY OF AIR-OCEAN REMOTE SENSING (3-0).

Overview of systems of remote sensing of the atmosphere and oceans from space, and operational applications. PREREQUISITES: Undergraduate physics and calculus, or consent of instructor.

#### Upper Division or Graduate Courses

#### OC3120 BIOGEOCHEMICAL PROCESSES IN THE OCEAN (4-3).

Basic biological, geological, and chemical processes in the ocean. Biocoustics, deep scattering layers, and bio-deterioration. Geomorphic features of the ocean floor; kinds and distribution of ocean bottom features. Chemical composition of the ocean.

**OC3130 MECHANICS OF FLUIDS (4-2).**

Fundamentals of the mechanics of fluids as a basis for geophysical fluid dynamics; introduction to field concepts, conservation principles, forces and effects, stress and rate of strain, momentum, energy, irrational flow; introduction to turbulence and boundary-layer flow. Emphasis on problem solving. **PREREQUISITE:** MA 2121 equivalent (may be concurrent).

**OC3140 PROBABILITY AND STATISTICS FOR AIR-OCEAN SCIENCES (3-2).**

Basic probability and statistics, in the air-ocean science context. Techniques of statistical data analysis. Structure of a probability model, density distribution function, expectation, and variance. Binomial, Poisson and Gaussian distributions. Conditional probability and independence. Joint distributions, covariance and central limit theorem. Transformations of random variables. Histograms and empirical distributions and associated characteristics such as moments and percentiles. Standard tests of hypotheses and confidence intervals for both one- and two-parameter situations. Regression analysis as related to least squares estimation. **PREREQUISITE:** Calculus.

**OC3150 ANALYSIS OF AIR OCEAN TIME SERIES (3-2).**

Analysis methods for atmospheric and oceanic time series. Fourier transforms applied to linear systems and discrete data. Correlation functions, power density spectra and cospectra. Optimal design of air-ocean data network. Laboratory work involves analysis of actual atmospheric and ocean time series using principles developed in class. **PREREQUISITES:** MA 3132 and a probability and statistics course.

**OC3210 POLAR OCEANOGRAPHY (3-0).**

Covers the sea ice characteristics and physical oceanography of polar seas. Sea ice: types, physical and mechanical properties, heat flux, temporal and spatial distribution, melting and freezing processes, forecasting models, and remote sensing of ice/snow covered surfaces. Oceanography: currents and water masses, deep and bottom water formation, fronts and eddies, polynya processes, and underwater acoustics. Discuss naval and research operations in polar waters. **PREREQUISITE:** OC 3240.

**OC3212 POLAR METEOROLOGY/OCEANOGRAPHY (4-0).**

Operational aspects of Arctic and Antarctic meteorology. Polar oceanography. Sea ice: amount, its seasonal distribution, melting and freezing processes, physical and mechanical properties, drift, and predictions. **PREREQUISITES:** MR 3222, OC 3240, or consent of instructor.

**OC3230 DESCRIPTIVE PHYSICAL OCEANOGRAPHY (3-1).**

Physical properties of seawater. Processes influencing the distribution of heat, salt and density in the ocean. Static stability in the ocean. Circulation and water masses in the ocean. Laboratory work involves analyses of actual ocean data-using principles developed in class. **PREREQUISITE:** MR/OC 2020 or equivalent (may be concurrent).

**OC3240 OCEAN DYNAMICS I (4-2).**

Application of dynamical concepts of ocean circulation, including conservation of mass, momentum and energy. Oceanic currents without friction: inertial and geostrophic flows. Frictional currents: Reynolds equations, Ekman and wind-driven flows. Vorticity balance: Sverdrup transport, potential vorticity, topographic steering, western intensification, and Rossby waves. Thermohaline effects and thermocline theory. **PREREQUISITES:** OC 3230 and OC 3321 or equivalent.

**OC3260 SOUND IN THE OCEAN (4-0).**

The fundamentals of ocean acoustics including the acoustic wave equation, ray tracing, acoustic arrays and filters, ambient noise, scattering, absorption and an introduction to normal mode theory. Examples from acoustical oceanography including ocean tomography, flow visualization and acoustic probing of the ocean surface and bottom. **PREREQUISITES:** OC 3230 and MA 3132 or equivalent.

**OC3261 OCEANIC FACTORS IN UNDERWATER SOUND (4-2).**

Examines the oceanic factors which influence sound propagation in the ocean and the effects in acoustic forecasting. Factors considered include temporal and spatial variations in sound speed profiles, ambient noise, biological effects, reflection characteristics of ocean surface and bottom, signal fluctuations, and forecasting ocean thermal structure, transmission loss, and ambient noise. This course is designed for the Engineering Acoustics Curriculum. **PREREQUISITE:** PH 3452.

**OC3266 OPERATION ACOUSTIC FORECASTING (2-2).**

A laboratory-oriented course to demonstrate operational sonar performance techniques. Realistic naval scenarios utilized to determine target sonar and environmental input parameters for various operational transmission loss and ambient noise models. Input environmental data bases, threat submarine acoustic parameters, and active and passive sonar parameters discussed. **PREREQUISITES:** OC 3264; SECRET clearance.

**OC3321 AIR-OCEAN FLUID DYNAMICS (4-0).**

The hydrodynamical equations for rotating stratified fluid. Forces, kinematics, boundary conditions, scale analysis. Simple balanced flows, baroclinicity, thermal wind, vorticity and divergence; rotational and divergent part of the wind; circulation theorem. Vorticity and potential vorticity equations. **PREREQUISITE:** MA 2047.

**OC3325 MARINE GEOPHYSICS (3-0).**

Theory and methods of marine geophysics surveys, and emphasis on gravity, magnetism, seismic and acoustic wave propagation; geophysical anomalies associated with major seafloor features; marine geodesy. **PREREQUISITE:** MR 2121 (may be concurrent).

**OC3445 OCEANIC AND ATMOSPHERIC OBSERVATIONAL SYSTEMS (2-2).**

Principles of measurement; sensors, data acquisition systems, calibration, etc. Methods of measurement for thermodynamic and dynamic variables in the ocean and atmosphere, including acoustics and optics. **PREREQUISITES:** OC 3230 and MR 3420, MR/OC 3150 or consent of instructor.

**OC3520 REMOTE SENSING OF THE ATMOSPHERE AND OCEAN (4-0).**

Principles of radiative transfer and satellite sensors and systems; visual, infrared and microwave radiometry, and radar systems; application of satellite remotely-sensed data in the measurement of atmospheric and oceanic variability. **PREREQUISITE:** Undergraduate physics and differential/integral calculus; ordinary differential equations or consent of instructor.

**OC3522 REMOTE SENSING OF THE ATMOSPHERE AND OCEAN LABORATORY (4-2).**

Same as OC 3520 plus laboratory sessions on the concepts considered in the lecture series. **PREREQUISITE:** Same as OC 3520.

**OC3570 OPERATIONAL OCEANOGRAPHY/METEOROLOGY (2-4).**

Experience at sea acquiring and analyzing oceanographic and atmospheric data using state of the art instrumentation. Integration of satellite remote sensing and other operational products with in situ data. Includes

survey of instrumentation, pre-cruise planning, operations at sea, and post-cruise analysis. **PREREQUISITE:** OC 3240 or MR 3220 or consent of instructor.

## **OC3610 WAVE AND SURF FORECASTING (2-2).**

Theory and prediction of wind-generated ocean waves. Spectral transformation of waves from deep to shallow water. Prediction of surf and wave related influences on operations. **PREREQUISITES:** OC 3150, OC 4211.

### Graduate Courses

## **OC4211 OCEAN DYNAMICS II (4-0).**

Linear theory of surface, internal, inertial-internal and Rossby waves. Coastal and equatorial trapped waves. Barotropic and baroclinic instabilities in the ocean. **PREREQUISITES:** MA 3132 and OC 3240.

## **OC4212 TIDES (4-0).**

Development of the theory of tides including the tide-producing forces, equilibrium tides, and the dynamic theory of tides; harmonic analysis and prediction of tides; tidal datum planes and their relationship with geodetic datum planes, short-term and secular changes in sea level. **PREREQUISITES:** OC 3130 or OC 4211.

## **OC4213 NEARSHORE AND WAVE PROCESSES (3-1).**

Shoal-water wave processes, breakers and surf; nearshore water circulation; beach characteristics; littoral drift; coastal hydraulics; storm surge. **PREREQUISITE:** OC 4211 or consent of instructor.

## **OC4220 COASTAL OCEANOGRAPHY (4-1).**

Coastal ocean physical processes. Dynamics and models of coastal ocean circulations driven by wind, thermohaline, tidal, boundary currents, and ocean eddy forces. Recent papers on coastal ocean circulation. Laboratory sessions on computing properties of coastal trapped waves and wind-driven motions over the shelf and slope. **PREREQUISITE:** OC 4211.

## **OC4250 GENERAL CIRCULATION OF THE ATMOSPHERE AND OCEANS (3-0).**

Selected topics on the general circulation of the atmosphere (e.g., heat momentum and moisture fluxes; energetics) and ocean (e.g. linear and non-linear theories of the wind-driven ocean circulation, nonlinear thermocline theories, mesoscale eddies, mixed-layer theories); coupled ocean-atmosphere general circulation models. **PREREQUISITE:** Consent of instructor.

## **OC4262 THEORIES AND MODELS IN UNDERWATER ACOUSTICS (3-0).**

The second in a three-course sequence of underwater acoustics courses. Development of the underlying theories and algorithms of ray, normal mode, and parabolic equation acoustic models for both range independent and dependent environments. Examination of the strengths and weaknesses of and similarities between the various models. **PREREQUISITES:** OC 3260, and MA 3132 or equivalent.

## **OC4264 OCEAN ACOUSTIC PREDICTION (3-2).**

The third in a three-course sequence of underwater acoustics courses. Examines the temporal and spatial influence of oceanic viability on underwater sound propagation and ambient noise. Emphases on empirically-derived quantities representative of all oceanic area and seasons. Operational prediction models of transmission loss, ambient noise, and reverberation are described and used in laboratory exercises to evaluate sonar performance. **PREREQUISITE:** OC 3260.

## **OC4267 OCEAN INFLUENCES AND PREDICTION: UNDERWATER ACOUSTICS: (4-3).**

Examines sound speed profiles (time and space variability), ambient noise, absorption, and reflection from the sea surface and

bottom as they affect sound propagation in the ocean. Synoptic prediction techniques for ambient noise and transmission loss are reviewed. Environmental data input and computational approximations for acoustic models are evaluated against observed signal fluctuations and transmission loss. The course is designed for the Air-Ocean Science, Operational Oceanography, and ASW Curricula. PREREQUISITES: OC 2120 and OC 3260.

#### **OC4323 NUMERICAL AIR AND OCEAN MODELING (4-2).**

Numerical models of atmospheric and oceanic phenomena. Finite difference techniques for solving elliptic and hyperbolic equations, linear and non-linear computational instability. Spectral and finite element models. Filtered and primitive equation prediction models. Sigma coordinates. Objective analysis and initialization. Moisture and heating as time permits. PREREQUISITES: MR 4322, or OC 4211, MA 3132; MA 3232 desirable.

#### **OC4324 ADVANCED NUMERICAL OCEAN MODELING (3-0).**

Advanced techniques for simulating and predicting ocean circulation, including recent modeling results. Topics to include multi-layer quasi-geostrophic models, multi-level primitive equation models, treatment of irregular geometry and open boundary conditions, satellite data assimilation and computer technology considerations. PREREQUISITES: MR/OC 4323.

#### **OC4331 MESOSCALE OCEAN VARIABILITY (4-0).**

Contemporary knowledge of nonlinear eddy phenomena: Kinematics, dynamics and energetics determined from observations, theories and models. Ocean eddies, ocean fronts, meandering currents, and geostrophic turbulence. PREREQUISITES: OC 4211.

#### **OC4335 ELEMENTS OF OCEAN PREDICTION (3-2).**

Analyze, forecast, and interpret synoptic information on mesoscale, synoptic scale, and large scale processes on a regional basis. Use is made of dynamical and statistical principles and methods and of diagnostic and prognostic models. PREREQUISITES: OC 4330, and MR/OC 4323 (may be concurrent).

#### **OC4413 AIR-SEA INTERACTION (4-1).**

Fundamental concepts in turbulence. The atmospheric planetary boundary layer, including surface layer, and bulk formulae for estimating air-sea fluxes. The oceanic planetary boundary layer including the dynamics of the well-mixed surface layer. Recent papers on large-scale air-sea interaction. PREREQUISITES: MR/OC 3150 and OC 3240 or MR 4322, or consent of instructor.

#### **OC4414 ADVANCED AIR/SEA INTERACTION (3-0).**

Advanced topics in the dynamics of the atmospheric and oceanic planetary boundary layers. PREREQUISITE: MR/OC 4413 or consent of instructor.

#### **OC4415 OCEAN TURBULENCE (3-0).**

Advanced topics in the dynamics of ocean turbulence, wakes and microstructure. PREREQUISITE: MR/OC 4413 or consent of instructor.

#### **OC4520 TOPICS IN SATELLITE REMOTE SENSING (3-0).**

Selected topics in the advanced application of satellite remote sensing to the measurement of atmospheric and oceanic variables. PREREQUISITE: MR/OC 3522.

#### **OC4610 SOVIET OCEANOGRAPHY (3-0).**

Soviet civilian and naval oceanography program including centers, research vessels, instrumentation, remote sensing, numerical modeling and current ocean research areas. Relation to naval strategy and operations. Recent Soviet papers. PREREQUISITE: OC 3240 or consent of instructor.

**OC4800 ADVANCED COURSES IN OCEANOGRAPHY (Variable).**

Advanced courses in various aspects of oceanography. Typically these are advanced topics not covered in regularly offered courses. The course may be repeated for credit as topics change. **PREREQUISITE:** Consent of the Department Chairman and instructor.

**OC4900 DIRECTED STUDY IN OCEANOGRAPHY (Variable).**

Independent study of advanced topics in oceanography. **PREREQUISITE:** Consent of the Department Chairman and instructor. Graded on Pass/Fail basis only.

**OC4930 OCEAN ACOUSTIC TOMOGRAPHY (3-0).**

An introduction to Ocean Acoustic Tomography, an underwater acoustic inverse technique for mapping ocean sound speed and current fields. Covers the major aspects of Ocean Acoustic Tomography, including the underlying concepts, the design and transmission of tomographic signals, and linear inverse methods for the reconstructions of ocean fields. **PREREQUISITES:** OC 3260 or EC 3450 or PH 4453 or equivalent; MA 2042; MA 3132 or equivalent.

**MAPPING, CHARTING,  
AND GEODESY**

Lower Division Course

**GH1101 NAUTICAL SCIENCE FOR HYDROGRAPHERS (2-0).**

Basic principles of nautical science for hydrographers with little or no previous sea experience. Topics include piloting and navigation, rules of the road, use of radar, radar plotting, small boat handling, ship capabilities, seamanship, emergency procedures, safety at sea, marine communications, and magnetic and gyro compasses.

Upper division or Graduate Courses

**GH3901 MAPPING, CHARTING, AND GEODESY (4-2).**

Principles and fundamentals of geodesy, photogrammetry, and cartography. The application of these disciplines to mapping and charting with emphasis on the propagation of random errors inherent in each phase: data acquisition, data reduction, generalization, and portrayal.

**GH3902 HYDROGRAPHIC AND GEODETIC SURVEYING (4-2).**

Principles and applications of hydrographic and geodetic surveying. Introduction to surveying procedures, both at sea and on land, including use of surveying instruments. **PREREQUISITE:** GH 3901.

**GH3903 ELECTRONIC SURVEYING AND NAVIGATION (4-0).**

Introduction to the theory and practice of electronic surveying and navigation including principles of electronics, electronic surveying systems and basic components, geometry of electronic surveying, ray path curvature, propagation velocity, and velocity applications to surveying. **PREREQUISITE:** GH 3902.

**GH3906 HYDROGRAPHIC SURVEY PLANNING (2-2).**

Planning and management of a hydrographic survey project. Gathering of sufficient background data (geodetic control, historic tide station locations, etc.) and its implementation in planning a complete basic hydrographic survey of Monterey Bay. **PREREQUISITE:** GH 3902.

**GH3910 HYDROGRAPHIC SURVEYING FIELD EXPERIENCE (2-9).**

Conduct a basic hydrographic survey of a portion of Monterey Bay. Field work consists of locating horizontal control stations through photogrammetric methods,

installing and monitoring a tide gage, and running sounding lines using various types of positioning control. Data acquisition, reduction, and presentation will be emphasized. **PREREQUISITES:** GH 3906 and concurrent registration in GH 3911.

**GH3911 GEODETIC SURVEYING FIELD EXPERIENCE (1-5).**

Conduct a geodetic survey project in the Monterey Bay area to support GH 3910. Methods include triangulation, trilateration, traverse, resection, and intersection. Azimuth determination by observation on Polaris. **PREREQUISITES:** GH 3906 and concurrent registration in GH 3910.

**GH3914 ADJUSTMENT COMPUTATIONS (2-2).**

Solution and analysis of geodetic networks and photogrammetric problems using least squares with matrices. Variance and covariance. Weights. Condition and observation equations, and combinations. Statistical tests. **PREREQUISITE:** MA 2047.

**GH3950 NAVAL ASTRONOMY AND PRECISE TIME (2-0).**

Positional astronomy. Coordinate systems. Solar system dynamics. Astrometry (measurements of positions and motions of stars). Time, earth rotation, and atomic clocks. Naval applications of astronomy. Overview of astrophysics and cosmology. **PREREQUISITE:** College physics and calculus.

Graduate Courses

**GH4800 ADVANCED TOPICS IN GEODETIC SCIENCE (Variable).**

Advanced topics in various aspects of the

geodetic science. Topics not covered in regularly offered courses. The course may be repeated for credit as topics change. **PREREQUISITES:** Consent of the Department Chairman and instructor.

**GH4906 GEOMETRIC AND ASTRONOMIC GEODESY (4-0).**

Properties of the ellipsoid, geometric aspects of geodesy including triangulation, trilateration, traverse, and leveling techniques and instrumentation; datum transformation, astronomic determination of latitude, longitude, and azimuth; time and astronomic instrumentation. **PREREQUISITES:** OC 3325 and GH 3902.

**GH4907 GRAVIMETRIC AND SATELLITE GEODESY (4-0).**

Potential theory as applied to the gravity field of the earth; application of Stokes' Formula, integral, and function; deflection of the vertical; gravimetric reduction; geometric and dynamic applications of satellites, orbital geometry and satellite orbit dynamics. **PREREQUISITE:** GH 4906.

**GH4908 PHOTOGRAMMETRY AND REMOTE SENSING (3-2).**

Application of photogrammetric instruments and techniques to planimetric, topographic, and hydrographic data compilation. Use of analog, semi-analytical and analytical photogrammetry in geodetic control extension. Planning and execution of aerial photography. Principles and fundamentals of remote sensing. Application of remote sensing imagery to mapping and charting. **PREREQUISITE:** GH 3902.

## DEPARTMENT OF OPERATIONS RESEARCH

**Peter Purdue**, Chairman and Professor (1986)\*; PhD, Purdue University, 1972.

**Michael Page Bailey**, Assistant Professor (1988); PhD, University of North Carolina, 1988.

**Dan Calvin Boger**, Associate Professor (1979); PhD, University of California at Berkeley, 1979.

**Gordon Hoover Bradley**, Professor (1973); PhD, Northwestern University, 1967.

**Gerald Gerard Brown**, Professor (1973); PhD, University of California at Los Angeles, 1974.

**James Norfleet Eagle, II**, Associate Professor (1982); PhD, Stanford University, 1975.

**James Daniel Esary**, Professor (1970); PhD, University of California at Berkeley, 1957.

**Robert Neagle Forrest**, Professor (1964); PhD, University of Oregon, 1959.

**Donald Paul Gaver, Jr.**, Distinguished Professor (1970); PhD, Princeton University, 1956.

**Thomas Eugene Halwachs**, Commander, U.S. Navy, Director of Wargaming (1988); MS, Naval Postgraduate School, 1976.

**Thomas Harry Hoivik**, Captain, U.S. Navy, Chair of Applied Systems Analysis (1987); MS, Naval Postgraduate School, 1973.

**Gilbert Thoreau Howard**, Associate Professor and Director of Research Administration (1967); PhD, Johns Hopkins University, 1967.

**Wayne Philo Hughes, Jr.**, Adjunct Professor (1979); MS, Naval Postgraduate School, 1964.

**Patricia Anne Jacobs**, Professor (1978); PhD, Northwestern University, 1973.

**Laura Derelle Johnson**, Assistant Professor (1987); PhD, University of California at Berkeley, 1983.

**Harold Joseph Larson**, Professor (1962); PhD, Iowa State University, 1960.

**Siriphong Lawphongpanich**, Assistant Professor (1987); PhD, University of Florida, 1983.

**Peter Adrian Walter Lewis**, Distinguished Professor (1971); PhD, University of London, 1964.

**Judith Harris Lind**, Instructor (1985); MS, Naval Postgraduate School, 1985.

**Glenn Frank Lindsay**, Associate Professor (1965); PhD, Ohio State University, 1966.

**Bard Knox Mansager**, Lieutenant Colonel, U.S. Army, Instructor (1987); MA, University of California San Diego, 1977.

**Kneale Thomas Marshall**, Professor and Dean of Information and Policy Sciences (1968); PhD, University of California at Berkeley, 1966.

**Alan Wayne McMasters**, Professor (1965); PhD, University of California at Berkeley, 1966.

**Paul Robert Milch**, Professor (1963); PhD, Stanford University, 1966.

**Thomas Mitchell**, Lieutenant Commander, U.S. Navy, Assistant Professor (1986); PhD, University of Georgia, 1979.

**Samuel Howard Parry**, Associate Professor (1964); PhD, Ohio State University, 1971.

**Gary Kent Poock**, Professor (1967); PhD, University of Michigan, 1967.

**Robert Richard Read**, Professor (1961); PhD, University of California at Berkeley, 1957.

**Edward Brandt Rockower**, Associate Professor (1984); PhD, Brandeis University, 1975.

**Richard Edwin Rosenthal**, Professor (1985); PhD, Georgia Institute of Technology, 1975.

**David Alan Schrady**, Professor (1965); PhD, Case Institute of Technology, 1965.

**Bruno Otto Shubert**, Associate Professor (1969); PhD, Stanford University, 1968.

**Rex Hawkins Shudde**, Associate Professor (1962); PhD, University of California at Berkeley, 1956.

**Michael Graham Sovereign**, Professor (1970); PhD, Purdue University, 1965.

**James Grover Taylor**, Professor (1968); PhD, Stanford University, 1966.

**David Barry Wadsworth**, Commander, U.S. Navy (1988); MS, Naval Postgraduate School, 1985.

**William John Walsh**, Lieutenant Commander, U.S. Navy, Instructor (1987); MS, Naval Postgraduate School, 1985.

**Alan Robert Washburn**, Professor (1970); PhD, Carnegie Institute of Technology, 1965.

**Roger Kevin Wood**, Associate Professor (1982); PhD, University of California at Berkeley, 1982.

**Walter Max Woods**, Professor (1962); PhD, Stanford University, 1961.

*\*The year of joining the Postgraduate School Faculty is indicated in parentheses.*

#### Chairman:

Peter Purdue, Professor,  
Code 55, Root Hall, Room 272,  
(408) 646-2381, AV 878-2381.

#### Associate Chairmen:

##### Operations:

Thomas E. Halwachs, Instructor,  
Code 55Ha, Root Hall, Room 265,  
(408) 646-2413, AV 878-2413.

##### Research:

Robert R. Read, Professor,  
Code 55Re, Root Hall, Room 259,  
(408) 646-2382, AV 878-2382.

##### Instruction:

James D. Esary, Professor,  
Code 55Ey, Root Hall, Room 273,  
(408) 646-2780, AV 878-2780.

The Operations Research Department was founded in 1961, primarily to service students in the rapidly expanding OA (360) Curriculum. Graduates of that Curriculum receive the Master of Science in Operations Research degree, as will graduates of the recently inaugurated Operational Logistics (361) Curriculum. The Department consists of approximately forty faculty located in Root Hall. The Department operates three laboratories: the Man/Machine Systems Design Lab on the first floor of Root Hall, the Wargaming Lab in Ingersoll Hall and the Micro-computer Lab in Ro-262.

In addition to being the primary Department for the 360 and 361 curricula, the Operations Research Department also provides an extensive sequence of

service courses for students in other curricula, and is charged with teaching all probability and statistics courses at NPS. Nearly half of the Department's teaching effort is devoted to these courses.

Active research areas within the Department include statistics, stochastic processes, mathematical programming, human factors, wargaming, simulation, combat models, logistic systems and the study of Soviet military operations research.

### **MASTER OF SCIENCE IN APPLIED SCIENCE**

Students with acceptable academic backgrounds may enter a program leading to a degree in Applied Science with a major in Operations Research. The program of each student seeking this degree must contain a minimum of 20 quarter hours in operations research at the graduate level, including work at the 4000 level. Additionally, the program must contain a minimum of 12 graduate quarter hours in an approved sequence of courses outside the Department of Operations Research. A total minimum of 12 quarter hours at the 4000 level plus an acceptable thesis is required. This program provides depth and diversity through specially arranged course sequences to meet the needs of the Navy and the interests of the individual. The Department Chairman's approval is required for all programs leading to this degree. Applications to include this degree in dual Master's programs will not be approved.

### **MASTER OF SCIENCE IN OPERATIONS RESEARCH**

The degree of Master of Science in Operations Research requires that:

1. A candidate shall previously have satisfied the requirements for the degree of Bachelor of Science in Operations Research or the equivalent.
2. Completion of a minimum of 40 quarter hours of graduate level courses with:
  - a. At least 18 quarter hours of 4000 level operations research/systems analysis courses.
  - b. An elective sequence approved by the Department of Operations Research.
  - c. At least two but not more than three quarter courses devoted to a thesis. This credit shall not count toward the requirement as stated in (a) above.
3. Submission of an acceptable thesis on a subject previously approved by the Department of Operations Research.

The Department offers the Ph.D. degree in Operations Research. The program begins with advanced coursework guided by the student's doctoral committee and leading to qualifying examinations in mathematical programming, statistics and stochastic processes, as well as completion of a minor field of study outside of Operations Research. The primary emphasis then shifts to the student's research program culminating in the Ph.D. dissertation.

Students wishing to enter directly into the doctoral program should write to the Department Chairman. Applicants should include transcripts, Graduate Record Examination (or equivalent) scores, and a brief statement of purpose. Detailed admission procedures may vary depending on the individual's location and position. However, in all cases the student must fulfill the general school requirements for the Doctor's degree. Residency for this program generally requires 2-3 years beyond completion of a Master's Degree.

### **DEPARTMENTAL COURSE OFFERINGS**

#### **OA0001 SEMINAR FOR OPERATIONS ANALYSIS STUDENTS (NO CREDIT) (0-2).**

Guest lecturers. Review of experience tours. Thesis and research presentations.

**OA0200 INTRODUCTION TO COMPUTATIONAL METHODS FOR OPERATIONS RESEARCH (NO CREDIT) (Meets last 6 weeks of quarter) (2-2).**

Introduction to proper computer use methods with the NPS mainframe computer. Emphasis of the lectures is on fundamentals and conceptual entities of the computer system, including major building blocks and system limitations. Operating systems will be introduced, with emphasis on the IBM mainframe's VM/CMS system. Laboratories will stress proper use of the mainframe, including programming in REXX, document processing with GML, and batch processing with the MVS system. **PREREQUISITE:** None.

**OA0810 THESIS RESEARCH FOR OPERATIONS ANALYSIS STUDENTS (0-0).**

Every student conducting thesis research will enroll in this course.

Upper Division Courses

**OA2200 COMPUTATIONAL METHODS OPERATIONS RESEARCH I (3-2).**

An introduction to interactive computing using A Programming Language (APL) and the graphics package GRAFSTAT. APL and GRAFSTAT provide the student with the capability to analyze, manipulate, and graph data sets and functions of one or two variables. Extensive project work will use APL and GRAFSTAT to solve OR problems. **PREREQUISITE:** None.

**OA2600 INTRODUCTION TO OPERATIONS ANALYSIS (4-0).**

A first course in Operations Analysis, covering its origins in World War II to current practice. Introduces concepts, tools and methods of analysis, with tactical examples. Emphasis is on measuring combat effectiveness and developing better tactics. **PREREQUISITE:** None.

**OA2910 SELECTED TOPICS IN OPERATIONS ANALYSIS (V-0).**

Presentation of a wide selection of topics from the current literature. This course may be repeated for credit if course content changes. **PREREQUISITE:** A background in operations research.

**OA3101 PROBABILITY (4-1).**

Probability axioms and event probability. Random variables and their probability distributions. Moment generating functions, moments and other distribution characteristics, distribution families. Functions of a random variable, including the probability integral transformation. **PREREQUISITE:** MA 1117 or equivalent.

**OA3102 PROBABILITY AND STATISTICS (4-1).**

Jointly distributed random variables, independence and conditional distributions, covariance and correlation. Functions of several random variables, sampling distributions, limiting distributions, the central limit theorem, approximations. Order statistics, the t and f distributions, the bivariate normal distribution. Point estimation, properties of estimators. **PREREQUISITES:** OA 2200, OA 3101 and MA 1118 or equivalent; MA 3110 taken concurrently.

**OA3103 STATISTICS (4-1).**

Confidence intervals, hypothesis testing, regression, analysis of variance, nonparametric inference. Applications to reliability, test and evaluation and operations research problems. **PREREQUISITE:** OA 3102 or equivalent.

**OA3104 DATA ANALYSIS (3-1).**

Techniques of analyzing, summarizing, and comparing sets of real data. The exploratory nature of data analysis is featured through a variety of plotting methods and interactive work on computer terminals. Includes model building, and the discovery and overcoming of shortcomings in data collected in actual situations. **PREREQUISITE:** OA 3103.

**OA3105 NONPARAMETRIC STATISTICS (4-0).**

Tests based on the binomial distribution; confidence intervals for percentiles, tolerance intervals and goodness-of-fit tests; contingency tables; one sample tests, two sample tests and tests for independence based on ranks and scores; nonparametric analysis of variance and regression. Applications will illustrate the techniques. **PREREQUISITE:** Acourse in statistical inference.

**OA3200 COMPUTATIONAL METHODS FOR OPERATIONS RESEARCH II (3-2).**

Asecond course in computer programming, with emphasis on the use of a higher level programming language directed toward computational methods particularly appropriate to operations research. Primary emphasis on the planning and structuring of computer programs using FORTRAN 77. In depth analysis of proper program logic flow, program listings and debugging techniques. Introduction to Mathematical and Statistical subroutine libraries. Assigned projects involve file management, data structures, OR modelling, numerical analysis, data analysis, basic complexity analysis, and computer simulation. **PREREQUISITE:** OA 2200 or consent of the Instructor.

**OA3201 LINEAR PROGRAMMING (4-1).**

Theory of optimization of linear functions subject to linear constraints. The simplex algorithm, duality, sensitivity analyses, parametric linear programming. Applications to resource allocation, manpower planning, transportation and communications, network models, ship scheduling, etc. Introduction to computer-based linear programming systems. **PREREQUISITES:** MA 2042, MA 3110, and OA 3200.

**OA3301 STOCHASTIC MODELS I (4-0).**

The homogeneous and inhomogeneous Poisson process, filtered and compound Poisson process. Stationary Markov chains and their applications in modeling random phenomena. **PREREQUISITE:** OA 3101 or consent of instructor.

**OA3302 OA SYSTEM SIMULATION (4-0).**

Discrete event digital simulation methodology. Monte Carlo techniques, use of FORTRAN and other available simulation languages. Variance reduction techniques, design of simulation experiments and analysis of results. **PREREQUISITES:** OA 3200 or equivalent, OA 3103 or equivalent, OA 3301.

**OA3401 HUMAN FACTORS IN SYSTEMS DESIGN I (4-0).**

The human element in man-machine systems. Selected topics in human engineering and psychophysics with emphasis on their relation to military systems. Man-machine interface and man's motor and sensory capacities. **PREREQUISITE:** A course in statistics.

**OA3402 HUMAN FACTORS IN SYSTEMS DESIGN II (3-0).**

The human element in man-machine systems. Selected topics in human engineering and psychophysics with emphasis on their relation to military systems. Man-machine interface and man's motor and sensory capacities. **PREREQUISITE:** A course in statistics.

**OA3501 INVENTORY I (4-0).**

Astudy of deterministic and approximate stochastic inventory models. Deterministic economic lot size models with infinite production rate, constraints, quantity discounts. An approximate lot size-reorder point model with stochastic demand. An approximate stochastic periodic review model. Single period stochastic models. Applications to Navy supply systems. **PREREQUISITE:** OA 3101 or consent of instructor.

**OA3601 COMBAT MODELS AND GAMES (4-0).**

This course provides a discussion of measures of effectiveness and a quantitative introduction to dynamic programming, target coverage models, Kalman filters, Lanchester Systems, and two-person zero-sum games. PREREQUISITES: MA 3110, OA 3102.

**OA3602 SEARCH THEORY AND DETECTION (4-0).**

Search and detection as stochastic processes. Characterization of detection devices, use and interpretation of sweep widths and lateral range curves, true range curves. Measures of effectiveness of search-detection systems. Allocation of search efforts, sequential search. Introduction to the statistical theory of signal detection. Models of surveillance fields, barriers, tracking and trailing. PREREQUISITES: OA 3301, SE 3321.

**OA3900 WORKSHOP IN OPERATIONS RESEARCH/SYSTEMS ANALYSIS (V-0).**

This course may be repeated for credit if course content changes. PREREQUISITE: Departmental approval. Graded on Pass/Fail basis only.

**OA3910 SELECTED TOPICS IN OPERATIONS RESEARCH/SYSTEMS ANALYSIS (V-0).**

Presentation of a wide selection of topics from the current literature. This course may be repeated for credit if course content changes. PREREQUISITE: A background of advanced work in operations research. Consent of Instructor.

## Graduate Courses

**OA4101 DESIGN OF EXPERIMENTS (3-1).**

Theory and application of the general linear hypothesis model. Analysis of variance and analysis of covariance. Planning experiments, traditional and hybrid experimental designs. Use of standard computer pack-

ages for analysis of experimental data. PREREQUISITE: OA 3103 or equivalent.

**OA4102 REGRESSION ANALYSIS (4-0).**

Construction, analysis and testing of regression models. An in-depth study of regression and its application in operations research, economics and the social sciences. PREREQUISITES: OA 3102, OA 3103, and OA 3104.

**OA4103 ADVANCED PROBABILITY (3-0).**

Probability spaces, random variables as measurable functions, expectation using the Lebesgue Stieltjes integral and abstract integration. Modes of convergence, characteristic functions, the continuity theorem, central limit theorems, the zero-one law. Conditional expectation. PREREQUISITE: MA 3605 or departmental approval.

**OA4104 ADVANCED STATISTICS (3-0).**

Foundations of statistics from a decision-theoretic viewpoint. Robust estimation techniques, biased estimation. Fisher's and Kullback information asymptotic methods. Sufficiency, completeness, the Cramer-Rao inequality. Sequential tests, empirical Bayes tests. Statistical computation methods. PREREQUISITE: OA 3103 and consent of Instructor.

**OA4201 NONLINEAR PROGRAMMING (4-0).**

Introduction to modern optimization techniques, Karush-Kuhn-Tucker necessary and sufficient conditions for optimality, quadratic and separable programming, basic gradient search algorithms and penalty function methods. Applications to weapons assignment, force structuring, parameter estimation for nonlinear or constrained regression, personnel assignment and resource allocation. PREREQUISITES: OA 3201, MA 3110.

**OA4202 NETWORK FLOWS AND GRAPHS (4-0).**

Introduction to formulation and solution of problems involving networks. Elements of graph theory, data structures, search algorithms, max-flow mincut theorem, shortest route problems, minimum cost flows, and PERT/CPM. Applications to production and inventory, routing, scheduling, network interdiction, and personnel management. PREREQUISITE: OA 3201.

**OA4203 MATHEMATICAL PROGRAMMING (4-0).**

Advanced topics in linear programming, large scale systems, the decomposition principle, additional algorithms, bounded variable techniques, linear fractional programming, formulation and solution procedures for problems in integer variables. Applications to capital budgeting, large scale distribution systems, weapon systems allocation and others. PREREQUISITE: OA 3201.

**OA4204 GAMES OF STRATEGY (4-0).**

Mathematical models of conflict situations, emphasizing the theory of decision making against a completely opposed enemy. Topics include matrix games, Blotto games, stochastic games, and the Shapley value. Applications to combat, resource allocation, cost sharing, etc. PREREQUISITES: OA 3201 and OA 3101 or consent of instructor.

**OA4205 ADVANCED NONLINEAR PROGRAMMING (4-0).**

Continuation of OA 4201. Advanced topics in non-linear programming including duality theory, further consideration of necessary and sufficient conditions for optimality, additional computational methods examination of recent literature in non-linear programming. PREREQUISITES: OA 4201.

**OA4206 DYNAMIC PROGRAMMING AND OPTIMAL CONTROL (4-0).**

The basic theory, including Bellman's equation and the Maximum Principle. Applications to tactical and economic problems. PREREQUISITE: OA 3201.

**OA4301 STOCHASTIC MODELS II (3-2).**

Course objectives are to teach methods of stochastic modeling beyond those taught in OA 3301 and to give students an opportunity to apply these tools to real world problems. Suitably selected projects that entail data collection and analysis are undertaken, with emphasis on problem formulation, choice of appropriate assumptions and attainment of practical results. Topics include renewal processes, and further topics in queueing, illustrated by several military and industrial applications. PREREQUISITES: OA 3301, OA 3302, OA3104.

**OA4302 RELIABILITY AND WEAPONS SYSTEM EFFECTIVENESS MEASUREMENT (4-0).**

Component and system reliability functions and other reliability descriptors of system effectiveness. Relationships between system and component reliability. Point and interval estimates of reliability parameters under various life testing plans. PREREQUISITE: OA 3301.

**OA4303 SAMPLE INSPECTION AND QUALITY ASSURANCE (4-0).**

Attribute and variables sampling plans. MILSTD sampling plans with modifications. Multi-level continuous sampling plans and sequential sampling plans. Structure and implementation of quality assurance programs and analysis of selected quality assurance problems. PREREQUISITE: OA 3101 or consent of instructor.

**OA4304 DECISION THEORY (3-0).**

Basic concepts, Bayes, admissible, minimax, and regret strategies. Principles of choice. Relation of statistical decision functions to the theory of games. Application in the planning of operational evaluation trials. PREREQUISITE: OA 3103.

**OA4305 STOCHASTIC MODELS III (4-0).**

Lecture topics include, non-stationary behavior of Markov processes, point process models, regenerative processes, Markovian queueing network models, and non-Markovian systems. Applications to include reliability, computer system modeling, combat modeling and manpower systems. Students are given exercises entailing data analysis, formulation of probability models, and application of models to answer specific questions concerning particular phenomenon. **PREREQUISITES:** OA 3104, OA 3301, OA 4301.

**OA4306 STOCHASTIC PROCESSES I.(4-0).**

A selection of topics from the Kolmogorov theorem, analytic properties of sample functions, continuity and differentiability in quadratic mean, stochastic integrals, stationary processes, non-stationary processes, Martingale limit theorems, the invariance principle, Markov and Gaussian processes. **PREREQUISITE:** OA 4103.

**OA4307 STOCHASTIC PROCESSES II (4-0).**

A continuation of OA 4306. **PREREQUISITE:** OA 4306.

**OA4308 TIME SERIES ANALYSIS. (4-0).**

Second order stationary processes. Harmonic analysis of correlation functions. Filters and spectral windows. Ergodic properties. Problems of inference in time series analysis. Box-Jenkins techniques. Introduction to the analysis of multivariate processes. **PREREQUISITE:** OA 3301, OA 3104.

**OA4321 DECISION SUPPORT SYSTEMS (3-1).**

An introduction to the topic; includes an overview of organizational decision making,

discussion of OR techniques integral to DDS, relationships to artificial intelligence and expert systems, specialized computer languages, and non-traditional techniques for handling uncertainty. Current operational systems, both military and civilian, will be used as examples. **PREREQUISITES:** OA 3200 and OA 3101 or consent of instructor.

**OA4333 SIMULATION METHODOLOGY (4-0).**

Advanced techniques of model development and simulation experimentation. Discussion of current research. Actual topics selected will depend on interests of students and Instructor. **PREREQUISITE:** OA 3302.

**OA4401 HUMAN PERFORMANCE EVALUATION (4-0).**

Experimental considerations, strategy, and techniques in evaluation of human performance characteristics and capabilities. Detailed examination of special methods to include multivariate designs, psychophysiological methods. Review of important variables affecting human performance and criteria, measures of effectiveness, and figures of merit as indicants of performance quality. **PREREQUISITE:** OA 3401.

**OA4402 SKILLED OPERATOR PERFORMANCE (3-2).**

First part of the course is devoted to an examination of the theoretical foundations of skilled performance. The second half of the course is devoted to the study of the acquisition, development and prediction of skilled operator performance in the operational setting. **PREREQUISITE:** OA 3401.

**OA4404 OPERATIONS RESEARCH IN MAN-MACHINE SYSTEMS (4-0).**

Application of operations research techniques to man-machine design and evaluation problems. Quantitative methods for performance will be treated using such concepts as reliability, information theory, and signal detection theory. A portion of the course is devoted to summarizing approaches to real world problems incorporating current methods from the literature. PREREQUISITES: OA 3401, OA 3201, OA 3301 and OA 4301 (may be taken concurrently).

**OA4501 SEMINAR IN SUPPLY SYSTEMS (4-0).**

Asurvey of the supply system for the U.S. Navy. Topics include the inventory models at all levels for consumables and repairables, budget formulation and execution, provisioning and allowance lists, planned program requirements, transaction item reporting and current topics of research such as stock migration, and material distribution studies. PREREQUISITE: OA 3501.

**OA4502 INVENTORY II (4-0).**

A study of stochastic inventory models. Single period models with time dependent costs, constrained multiple item single period models, deterministic and stochastic dynamic inventory models, the periodic review model, the Q-1 continuous review model. PREREQUISITES: OA 3301, OA3501.

**OA4602 CAMPAIGN ANALYSIS (4-0).**

The development, use and state-of-the-art of maritime campaign analysis. Emphasis is on formulating the analysis, measures of effectiveness, handling assumptions, and parametric evaluations. Communicating results in speech and writing is an important part of the course. Students conduct a project as study team members. They research and report on major portions of major U.S. Navy analyses. PREREQUISITES: OA 3103, OA 3302, OA 3601, OA 3602, OA 4604, and SECRET NOFORN clearance.

**OA4603 TEST AND EVALUATION (3-2).**

This course relates the theory and techniques of operations research to the problems associated with test and evaluation. Specific examples of exercise design, reconstruction, and analysis are examined. PREREQUISITE: OA 3104.

**OA4604 WAR GAMING ANALYSIS (4-0).**

Analysis of problems in the design, construction and application of manual, computer and interactive gaming. Emphasis is on gaming as a means of evaluating Naval Warfare tactics. NWISS and NAVTAG gaming facilities will be used. PREREQUISITES: OA 3302 and SECRET NOFORN clearance.

**OA4605 OPERATIONS RESEARCH PROBLEMS IN NAVAL WARFARE (3-0).**

Analysis of fleet exercises. Changes in tactics and force disposition arising from the introduction of nuclear weapons and missiles. Relationship of air defense to strike capability and ASW. Current radar, sonar, communications and ECM problems. PREREQUISITES: OA 3601, OA 4604.

**OA4606 APPLICATIONS OF SEARCH, DETECTION AND LOCALIZATION MODELS TO ASW (3-0).**

Applications of search, detection and localization models to search planning, target localization and tracking procedures, and ASW sensor evaluation. Both acoustic and non-acoustic ASW sensors are considered. PREREQUISITES: OS 3601 or OA 4604. SECRET NOFORN clearance.

**OA4607 TACTICAL DESIGN AND ANALYSIS (4-0).**

Use of hand-held programmable calculators (HPCs) and their application to tactical problems in the operational environment. Characteristics of currently available HPCs will be discussed and compared with special emphasis on the use of their more sophisticated features. Methods for implementing environmental, search, localization and tracking algorithms on the HPC. Individual and/or group projects allow the student to apply the concepts presented in class to problems in this area of expertise. **PREREQUISITES:** OA3602 or OS 3601 or consent of instructor and SECRET NOFORN clearance.

**OA4608 SOVIET MILITARY OPERATIONS RESEARCH (4-0).**

This course provides an introduction to Soviet military operations research, with an emphasis on asymmetries in Soviet and American use of military OR. It will focus on how OR influences Soviet military theory and practice. It will begin by examining the Soviet military mind as influenced by the Russian/Soviet historical experience, Marxist-Leninist ideology, and Soviet social and military institutions. It will then trace the historical development of military OR in the Soviet Union and discuss its nature today. Students will receive English translations of major Soviet works on military OR. **PREREQUISITES:** Course on combat modeling (e.g. OA 3601 or OA 4654) or consent of instructor, and SECRET NOFORN clearance.

**OA4610 MOBILIZATION (4-0).**

Introduction to the military and civilian systems for mobilization, linear programming and simulation formulations of strategic mobility and munitions scheduling. Planning and controls of the logistics systems, including planning factors and joint operations planning. Integration of mobilization with Navy operational logistics.

**OA4654 AIRLAND COMBAT MODELS I (4-0).**

Introduction to modeling air/ground combat operations with emphasis on detailed approaches for modeling small-scale combat. Topics include: types of models, the modeling process, verification, target acquisition models, target selection, weapon accuracy, lethality models, terrain effects, tactical decision making, and integration of these models into large scale simulation models of combat. Models currently in use in DOD analysis are used as examples throughout the course. **PREREQUISITE:** OA 3301.

**OA4655 AIRLAND COMBAT MODELS II (4-0).**

Modeling of large scale air/ground combat operations using aggregated force on force combat models. Topics include: Aggregation and disaggregation, types of models used for large scale operations, firepower index and Lanchester equation approaches to attrition modeling, movement rate of advance models, air warfare models, and air allocation, logistics, C3 I process models, artificial intelligence applications. Models currently in use for DOD analysis are used as examples throughout the course. **PREREQUISITE:** OA 3301 or consent of the Instructor.

**OA4701 ECONOMETRICS (4-0).**

Construction and testing of econometric models, analysis of economic time series, and the use of multivariate statistical analysis in the study of economic behavior. **PREREQUISITE:** OA 3103.

**OA4702 COST ESTIMATION (4-0).**

Advanced study in the methods and practice of systems analysis with emphasis on cost analysis; cost models and methods for total program structures and single projects; relationship of effectiveness models and measures to cost analysis; public capital budgeting of interrelated projects; detailed examples from current federal practices. **PREREQUISITE:** AS 3611 or equivalent.

**OA4703 DEFENSE EXPENDITURE AND POLICY ANALYSIS (4-0).**

A presentation of the major components of defense budgeting and policy formulation from the standpoint of the three major institutions involved, the agency, executive and congress. The use of quantitative models of institutional behavior is emphasized when examining both individual institutions and the interaction between them. **PREREQUISITE:** AS 3611.

**OA4704 OR TECHNIQUES IN MANPOWER MODELING (4-0).**

The most frequently applied manpower models are studied including Markov Chain and Renewal Models using grade and/or length of service categories. Statistical techniques to estimate relevant attrition and promotion rates from cohort and census data are also included in the course to provide both longitudinal and cross-sectional views of personnel systems. Career aspects are analyzed with respect to attrition, promotion opportunity and time to promotion in hierarchical systems with or without promotion zones. Examples emphasize the personnel systems of the military services. **PREREQUISITES:** OA 3201, 3301, and 3103.

**OA4910 SELECTED TOPICS IN OPERATIONS ANALYSIS (V-0).**

Presentation of a wide selection of topics from the current literature. This course may be repeated for credit if course content changes. **PREREQUISITE:** A background of advanced work in operations research and departmental approval.

**OA4930 READINGS IN OPERATIONS ANALYSIS (V-0).**

This course may be repeated for credit if course content changes. **PREREQUISITE:** Departmental approval. Graded on Pass/Fail basis only.

Service Course

**OS0810 THESIS RESEARCH FOR C3 STUDENTS (0-0).**

Every student conducting thesis research will enroll in this course.

Upper Division Courses

**OS2101 ANALYSIS OF EXPERIMENTAL DATA (4-0).**

Introduction to statistical analysis of measurements and experimental data. Frequency distributions, graphical representation. Populations and sampling. Principle of least squares, estimation of mean and standard deviation. Curve fitting and regression, propagation of errors. Confidence intervals, tests and contingency tables. Elementary ANOVA. Relevant probabilistic concepts introduced as needed.

**OS2102 INTRODUCTION TO APPLIED PROBABILITY FOR ELECTRICAL ENGINEERING (4-1).**

First course in probability. Structure of a probability model, density, distribution functions, expectation and variance. Some basic models, Binomial, Poisson and Gaussian distributions. Conditional probability and independence. Joint distributions, covariance and central limit theorem. Transformations of random variables. **PREREQUISITE:** MA 1118 or equivalent.

**OS2103 APPLIED PROBABILITY FOR SYSTEMS TECHNOLOGY (4-1).**

First course in probability for students in operational curricula. Topics include classical probability calculation, discrete and continuous random variables, basic probability distributions, introduction to modeling, expectation, variance, covariance and rudiments of discrete-time processes. Emphasis is on developing familiarity with basic concepts and computational skills rather than mathematical rigor. Problem session is used in part to refresh and reinforce necessary calculus topics. **PREREQUISITE:** MA 1118.

**OS2210 INTRODUCTION TO COMPUTER PROGRAMMING (4-1).**

An introduction to the operation and programming of the mainframe computer and portable programmable computers used in the ASW Curriculum. The FORTRAN and BASIC languages are emphasized.

Upper Division or Graduate Courses

**OS3001 OPERATIONS RESEARCH FOR COMPUTER SCIENTISTS (4-0).**

An introduction to some methodology and techniques of operations research that are relevant to computer system performance modeling and specification. Topics include Poisson processes, reliability theory and queueing theory.

**OS3002 OPERATIONS RESEARCH FOR NAVAL INTELLIGENCE (4-0).**

This course provides an introduction to the approach and methods of operations research, with special emphasis on military applications of interest to intelligence. It focuses on the mathematical modeling of combat operations and considers intelligence aspects (particularly Soviet use of OR). Students develop basic skills in such modeling. Topics include: operational definitions, measurement of combat effectiveness, model validation/verification, and models versus modeling. Also included are modeling of processes of target acquisition, fire assessment (kill probabilities and target coverage), tactical decision making, and games.

**OS3003 OPERATIONS RESEARCH FOR ELECTRONIC WARFARE (4-0).**

This course deals with applications of quantitative models to operational electronic warfare problems, with the underlying idea being to make decisions by optimizing some measure of effectiveness (MOE). Topics covered include ESM, ECM/ECCM, strike warfare. ASMD, and cost-effectiveness tradeoffs. PREREQUISITES: Calculus and OS 2103.

**OS3004 OPERATIONS RESEARCH FOR COMPUTER SYSTEMS MANAGERS (5-0).**

A one-quarter survey of Operations Research techniques of particular interest to students in computer systems management. Model formulation, decision theory, linear programming, project management techniques, inventory models, queueing and simulation, reliability and maintainability. Examples will illustrate the application of these techniques to the management of computer systems. PREREQUISITES: MA 2300, OS 3101.

**OS3005 OPERATIONS RESEARCH FOR COMMUNICATIONS MANAGERS (4-0).**

A one-quarter survey of Operations Research techniques of particular interest to students in communications management. Model formulation, decision theory, games, linear programming, network flows, CPM and PERT, reliability and maintainability, Queueing theory, and systems simulation. PREREQUISITES: MA 2300, OS 3101 or OS 3105.

**OS3006 OPERATIONS RESEARCH FOR MANAGEMENT (4-0).**

A survey of problem solving techniques for operations research. Topics include decision theory, linear programming, models, project scheduling, inventory, queueing and simulation. PREREQUISITES: MA 2300, OS 3101 or OS 3105.

**OS3007 OPERATIONS RESEARCH METHODOLOGY (4-0).**

Survey of Operations Research techniques not covered in OS 3006. Topics may include simulation, search theory, extensions of combat models, network flows, and Markov chains. PREREQUISITES: OS 3106 and OS 3006 concurrently.

**OS3008 ANALYTICAL PLANNING  
METHODOLOGY (4-0).**

A one-quarter survey of operations research techniques of particular interest to students in the C3 curriculum, with emphasis on model formation. Topics include linear and nonlinear programming, integer programming, networks, shop flow and project scheduling, decision analysis, queueing and simulation. **PREREQUISITE:** MA 2300.

**OS3101 STATISTICAL ANALYSIS  
FOR MANAGEMENT (4-1).**

A specialized course covering the basic methods of probability and statistics with emphasis on managerial applications. The course includes applications of probability models, statistical inference and regression analysis. Computation for these applications are carried out on a computer, using commercial software packages. Topics in probability include the binomial, geometric, Poisson and normal distributions, risk and expected value. Parametric statistical techniques include significance testing and confidence intervals, together with point estimation of model parameters. Regression analysis includes simple linear regression and multiple regression, with estimation of parameters and tests of hypothesis and confidence intervals for regression coefficients and the variance of the error term. **PREREQUISITE:** College algebra.

**OS3104 STATISTICS FOR SCIENCE  
AND ENGINEERING (4-0).**

Acquaint the engineering student with the techniques of statistical data analysis with examples from quality control, life testing, reliability and sampling inspection. Histograms and empirical distributions and random variables are introduced along with their probability distributions and associated characteristics such as moments and percentiles. Following a brief introduction to decision making, standard tests of hypothe-

ses and confidence intervals for both one and two parameter situations are treated. Regression analysis is related to least squares estimation and associated tests of hypotheses and confidence intervals treated. **PREREQUISITE:** Calculus.

**OS3105 STATISTICAL ANALYSIS  
FOR MANAGEMENT I (4-1).**

The first of a two-quarter course in the use of the tools of probability and statistics oriented toward management applications. Skills in numerical computation are developed in laboratory periods through the use of MINITAB. Emphasis in the lectures is placed on modeling problems and interpreting results. Those aspects of probability structure that are germane to distributions such as the binomial and normal. Standard topics of statistical inference for one and two variables are introduced in the settings of both hypothesis testing and confidence interval estimation. **PREREQUISITE:** MA 2300.

**OS3106 STATISTICAL ANALYSIS  
FOR MANAGEMENT II (4-1).**

The second of a two-quarter course in the use of the tools of probability and statistics oriented toward management applications. Using the tools and skills developed in OS 3105, the course consists of a general study of linear models, Analysis of variance for one and two way models is followed by simple linear and multiple regression including such topics as curve fitting, residual analysis, and stepwise regression, along with correlation analysis. Again the computer is used as a tool to facilitate computations with emphasis on statistical packages for large data bases, such as SPSS and SAS. The course concludes with a sampling of nonparametric procedures. **PREREQUISITE:** OS 3105.

**OS3301 SYSTEMS EFFECTIVENESS CONCEPTS AND METHODS (4-0).**

An introduction to system reliability, maintainability, and effectiveness analysis. Failure (repair) rates and mean times to failure (repair). Models for aging and completion. Block diagrams and fault trees. Life testing, availability, interval reliability, and the synthesis of reliability, maintainability, and effectiveness analysis. **PREREQUISITES:** OS 3105, OS 3106.

**OS3303 COMPUTER SIMULATION (4-1).**

Design, implementation and use of digital simulation models will be covered with special emphasis on features common to ASW problems. War gaming will be discussed and a game using the digital computer will be played and critiqued by the class. Exercise planning and analysis will be treated. Basic topics are explained including computer generation of random variates, statistical design and monitoring of model progress, machine representation of dynamic data structures, model verification and validation on special purpose simulation and gaming languages. **PREREQUISITES:** OS 2103, OS 3604 or equivalent, and a working knowledge of FORTRAN programming.

**OS3401 HUMAN FACTORS ENGINEERING (3-0).**

An introduction to human factors engineering for students in fields such as engineering. Designed to give the student an appreciation of man's capacities and limitations and how these can affect the optimum design of the man-machines system. Emphasis on integration of human factors into the system development cycle considering such topics as manpower/personnel costs, control and display design, human energy expenditure, physiological costs, and evaluation systems. **PREREQUISITE:** A previous course in probability and statistics.

**OS3402 HUMAN VIGILANCE-PERFORMANCE (3-1).**

Course involves an examination of man's attentiveness and capability in the detection of changes in stimulus events over prolonged periods of observation. Topics to be covered include theories of vigilance; task, signal, subject and environmental influences on performance, physiological and psychological responses and vigilance performance measurement. This course is designed for the ASW curriculum. **PREREQUISITE:** None.

**OS3403 HUMAN FACTORS IN ELECTRONIC WARFARE (3-1).**

This course will provide the student with the ability to evaluate and predict human performance in specified operational environments. The effects of stress factors such as noise, temperature, motion, work load, etc., on various aspects of human performance will be studied. Students will identify the control and display requirements of an EW system and design a workspace to accommodate an EW data reduction/analysis system. **PREREQUISITE:** OS 3604.

**OS3404 MAN-MACHINE INTERACTION (3-2).**

An introduction to the man-machine interface problems in C3. Information, display and human communication requirements for effective C3. Applied orientation with student receiving his own computerized mailbox on the ARPANET enabling him to experience message handling systems, query languages, computer to computer communications between the U.S. and Europe, command and control applications programs, file transfer between host computers, etc. **PREREQUISITE:** Enrollment in C3.

**OS3601 SEARCH, DETECTION, AND LOCALIZATION MODELS (4-0).**

An introduction to the decision problems associated with Navy detection systems. The relation of detection models to search and localization models, measures of effectiveness of search/detection systems, and the optimum allocation of search effort are discussed. This course is designed for the ASW curriculum. **PREREQUISITES:** OS 2103, PH 2401 or consent of instructor and SECRET clearance.

**OS3602 INTRODUCTION TO COMBAT MODELS AND WEAPONS EFFECTIVENESS (4-1).**

This course deals with the application of quantitative models to military problems. Topics include Lanchester's theory, game theory, reliability theory, systems effectiveness, and war gaming. This course is designed for the ASW curriculum. **PREREQUISITES:** OS 2103 and MA 2129.

**OS3603 SIMULATION AND WAR GAMING (3-1).**

Design, implementation and use of digital simulation models will be covered with special emphasis on features common to C3 and EW problems. War gaming will be discussed and a game using the digital computer will be played and critiqued by the class. Exercise planning and analysis will be treated. Basic topics are explained including computer generation of random variates, statistical design and monitoring of model progress, machine representation of dynamic data structures, model verification and validation on special purpose simulation and gaming languages. **PREREQUISITES:** OS 2103, OS 3604 or equivalent, and a working knowledge of FORTRAN programming, and SECRET clearance.

**OS3604 DECISION AND DATA ANALYSIS (4-0).**

This course provides an introduction to the techniques of decision analysis, statistics and data analysis. It is primarily for students in the ASW, EW and C3 curricula. Emphasis is placed on the analysis of data and decision making in the ASW, EW and C3 environments. **PREREQUISITES:** OS 2103 or equivalent.

**OS3636 ARCHITECTURE OF C3I SYSTEMS (4-0).**

This course is primarily intended for students in the command and control program. It provides an introduction to the evaluation and modeling of command-control-communications-and intelligence (C3I) systems, with an emphasis on the comparative anatomy of Blue and Red systems and operational intelligence. The student is introduced to concepts pertaining to the design, functioning, and evaluation of such large-scale systems and their architecture. **PREREQUISITES:** U.S. citizenship and TOP SECRET clearance with eligibility for SBI.

**OS3637 SOVIET OPERATIONS AND SYSTEMS (4-0).**

This course is intended for students in any of the operational curricula (but primarily the C3 program). It provides an introduction to Soviet thinking, conceptualization of military affairs, systems, and operations. Soviet control concepts, including troop control, control of combat means, and the role of automation, are emphasized. The systems approach to integrating different types of intelligence data to support U.S. defense (including command) decision making is considered. The course stresses the understanding of Soviet key words and concepts in military affairs. **PREREQUISITES:** U.S. citizenship and TOP SECRET clearance with eligibility for SI/SAO.

**OS3702 MANPOWER REQUIREMENTS DETERMINATION (4-0).**

The objective is to enable the student to use some of the tools of industrial engineering in the determination of the quantity and quality of manpower required in military systems. Techniques include motion and time study, work sampling, predetermined time standards, work design and layout, materials handling, procedures review and process design. Applications for ship and squadron manning documents and SHORESTAMPS are included. PREREQUISITES: OS 3006, or OA 3201 and OA 3301.

**OS4601 TEST AND EVALUATION (4-0).**

Designed for system technology students, this course examines problems associated with tests and evaluations of weapon systems and tactics. Included are concepts from experimental design, regression analysis. Realistic data sets and examples are discussed and analyzed. PREREQUISITE: Inferential statistics.

**OS4602 C3 SYSTEMS EVALUATION (2-4).**

This course is designed for Systems Tech-

nology students in the Command, Control and Communications Curriculum. The course deals with techniques for the design, implementation and analysis of experiments or exercises aimed at the test and evaluation of systems, tactics, or operational concepts. Course topics include modeling, experimentation methodology, design of experiments, multi-criteria decision analysis, reliability, and man-machine interaction. Case studies and real data will be examined and students will actively participate in evaluations through laboratory experiments. PREREQUISITES: OS 3008, OS 3603, OS 3604, SECRET NORFORN clearance.

**OS4701 MANPOWER AND PERSONNEL MODELS (4-0).**

The objective of this course is to introduce the student to the major types of manpower and personnel models for estimating the effects of policy changes on the personnel system. Topics include longitudinal and cross-section models, optimization models, data requirements and validation. Applications in the form of current military models are included. PREREQUISITES: OS 3006, and OS 3106.

---

**DEPARTMENT OF PHYSICS**

**Karlheinz Edgar Woehler**, Chairman and Professor (1962)\*; PhD, University of Munich, 1962.

**Robert Louis Armstead**, Associate Professor (1964); PhD, University of California at Berkeley, 1964.

**Anthony A. Atchley**, Associate Professor (1985); PhD, University of Mississippi, 1985.

**Steven Richard Baker**, Assistant Professor (1985); PhD, University of California at Los Angeles, 1985.

**Fred Ramon Buskirk**, Professor, (1960); PhD, Case Institute of Technology, 1958.

**David Dempster Cleary**, Assistant Professor (1988); PhD, Colorado, 1985.

**Alfred William Madison Cooper**, Professor (1957); PhD, the Queen's University of Belfast, 1961.

**Alan Berchard Coppens**, Associate Professor (1964); PhD, Cornell University, 1965.

**Harvey Arnold Dahl**, Assistant Professor (1964); PhD, Stanford University, 1963.

**Steven Lurie Garrett**, Professor (1982); PhD, University of California at Los Angeles, 1977.

**Otto Heinz**, Professor (1962); PhD, University of California at Berkeley, 1954.

**George Anthony Knott**, Instructor (1987); MS, Naval Postgraduate School, 1985.

**Xavier K. Maruyama**, Professor (1987); PhD, Massachusetts Institute of Technology, 1971.

**Edmund Alexander Milne**, Associate Professor (1954); PhD, California Institute of Technology, 1954.

**John Robert Neighbours**, Professor (1959); PhD, Case Institute of Technology, 1953.

**Richard Christopher Olsen**, Associate Professor (1987); PhD, University of California at San Diego, 1980.

**James Vincent Sanders**, Associate Professor (1961); PhD, Cornell University, 1961.

**Gordon Everett Schacher**, Professor (1964); PhD, Rutgers, 1961.

**Fred Richard Schwirzke**, Professor (1967); PhD, University of Karlsruhe, 1959.

**Donald Lee Walters**, Associate Professor (1983); PhD, Kansas State University, 1971.

**Oscar Bryan Wilson, Jr.**, Professor (1957); PhD, University of California at Los Angeles, 1951.

**William Bardwell Zeleny**, Associate Professor (1962); PhD, Syracuse University, 1960.

*\*The year of joining the Postgraduate School Faculty is indicated in parentheses.*

**Chairman:**

Karlheinz E. Woehler, Professor, Code 61Wh, Spanagel Hall, Rm. 100, (408) 646-2486, AV 878-2486.

**Associate Chairmen:**
**Administration:**

William B. Zeleny, Assoc. Professor, Code 61Zl, Spanagel Hall, Rm. 206C, (408) 646-2952, AV 878-2952.

**Instruction:**

Robert L. Armstead, Assoc. Prof., Code 61Ar, Spanagel Hall, Rm. 112, (408) 646-2125, AV 878-2125.

Expertise in the Department of Physics and efforts in research and teaching of graduate specialization courses for the last twenty years can be sum-

marized under the heading "physics of propagation phenomena in realistic, complex environments". Specialized course sequences are offered in the following areas:

1. Optical Signal Propagation and Detection.
2. Directed Energy Weapons Systems.
3. Nuclear Weapons and their Effects.
4. Underwater Acoustics.
5. Physics of the Space and Satellite Environment.
6. Physics of Solids and Solid State Devices.
7. Stochastic Physics of Large Scale Systems.
8. Classical Field Theory.

All of these specializations, except the last, are of obvious relevance to modern and future weapons technologies. The faculty supports an ongoing research program in these areas, and student thesis topics are available in all of them.

### DEGREE REQUIREMENTS

The Department of Physics offers the MS degree in Physics and in Engineering Science. In addition, the Ph.D. is offered by the Department. Upon approval by the Department, courses taken at other institutions may be applied towards satisfying degree requirements.

### MASTER OF SCIENCE IN PHYSICS

A candidate for the degree Master of Science in Physics must complete satisfactorily a program of study which includes a minimum of 30 quarter hours of physics courses (not including thesis) distributed among courses at the graduate (3000 or 4000) level; of these 30 hours at least 15 hours must be at the 4000 level. Upon approval of the Chairman of the Physics Department, a maximum of 4 hours of courses taken

in another department may be applied toward satisfying the above requirements. In lieu of the preceding requirements, students who are qualified to pursue graduate courses in physics when they arrive at the Naval Postgraduate School may complete a minimum of 20 hours entirely of 4000 level physics courses. In addition, all students must satisfy the general Postgraduate School minimum requirements for the Master's degree and present an acceptable thesis.

The following specific course requirements must be successfully completed for a student to earn the degree of Master of Science in Physics:

- a. PH3152: Mechanics II - Extended Systems,  
PH3352: Electromagnetic Waves,  
PH3683: Intermediate Quantum Physics,  
PH3990: Methods of Theoretical Physics,  
PH3782: Thermodynamics and Statistical Physics,  
or equivalents to the above courses.
- b. Either PH4353: Topics in Advanced Electricity and Magnetism  
or PH4984: Advanced Quantum Physics
- c. In addition to the above, a graduate sequence containing at least two Physics courses, at least one of which must be at the 4000 level.

All programs leading to the degree Master of Science in Physics must be approved by the Chairman of the Department of Physics.

### MASTER OF SCIENCE IN ENGINEERING SCIENCE

Students of the Weapon Systems Engineering Curriculum (530) who elect a Physics area as their specialization option will receive the degree Master of Science in Engineering Science. The

program must include at least 36 credit hours of graduate work in engineering, science and mathematics, at least 12 of which must be at the 4000 level. Of these 36 hours, at least 20 hours, including work at the 4000 level, must be in the Department of Physics. This will be the major department, and cognizance over the specialization course sequences, thesis research areas and the degree resides with the Chairman of the Department of Physics.

In addition to the major, the program must contain at least 12 hours at the graduate level in courses representing areas other than the major.

The candidate must present an acceptable thesis on a topic given prior approval by the Department of Physics. Final approval of the program leading to the Master of Science in Engineering Science with major in Physics shall be obtained from the Chairman of the Department of Physics.

### DOCTOR OF PHILOSOPHY

The PhD degree is offered in the Department in several areas of specialization which currently include Acoustics, Atomic Physics, Solid State Physics, Theoretical Physics, Nuclear Physics and Plasma Physics.

Requirements for the degree may be grouped into 3 categories: courses, thesis research and examinations in major and minor fields.

The required examinations are outlined under the general school requirements for the Doctor's degree. In addition to the school requirements, the Department requires a preliminary examination to show evidence of acceptability as a doctoral student.

The usual courses to be taken by the candidate include Classical Electrodynamics, Quantum Mechanics and Statistical Physics. (PH 4371, 4971, 4972, 4973, 4771, 4772.) Suitable electives are to be chosen in physics and the minor fields, mainly from the list of graduate level courses.

### PHYSICS LABORATORIES

The physics laboratories are equipped to carry on instruction and research work in atomic physics, nuclear physics, solid state physics, electro-optics, plasma physics, spectroscopy, and acoustics.

The 100 MeV electron liner accelerator provides a pulsed electron beam of 1 microampere average current and is used for radiation studies. This machine is being augmented by a Pulsarad 112 single pulse electron accelerator producing a 1.8 MeV, 40 kiloampere beam of 50 nanosecond duration. Both machines are suitable for studies of radiation effects in semiconductor devices and electromagnetic pulse generation.

The electro-optics laboratory uses imaging and detecting systems from the far infrared to the visible range including instrumentation for seagoing experiments in optical propagation. The laser laboratory contains a giant pulse laser and associated detection equipment for the visible spectrum as well as a high power laser in the IR region.

The spectroscopy equipment includes two infrared spectrophotometers and a near IR-visible-UV spectrophotometer. The spectroscopic data center contains a comprehensive compilation of the known energy levels and atomic spectral lines in the vacuum ultraviolet range.

The acoustics laboratory equipment includes a large anechoic chamber, a small reverberation chamber, and a multiple-unit acoustics laboratory for student experimentation in airborne acoustics. Sonar equipment, test and wave tanks, and instrumentation for investigation in underwater sound comprise the underwater acoustics laboratory.

### DEPARTMENTAL COURSE OFFERINGS

#### PHYSICS

**PH0110 REFRESHER PHYSICS (5-3)**  
(Meets last 6 weeks of quarter).

**NON-CREDIT.** A six-week course of selected topics from elementary physics for incoming students. Typical topics are kinematics, Newton's laws of motion, work, energy, linear and angular momentum. Vector algebra and some aspects of calculus are developed as needed and their use is emphasized. The two ninety-minute laboratory periods are devoted to guided problem solving. **PREREQUISITES:** Previous college courses in elementary physics and integral calculus.

**PH0499 ACOUSTICS COLLOQUIUM**  
(NO CREDIT) (0-1).

Reports on current research, and study of recent research literature in conjunction with the student thesis. **PREREQUISITE:** A course in acoustics.

**PH0810 THESIS RESEARCH (0-0).**

Every student conducting thesis research will enroll in this course.

**PH0999 PHYSICS COLLOQUIUM (NO CREDIT) (0-1).**

Discussion of topics of current interest by NPS and outside guest speakers.

## Lower Division Courses

**PH1111 FUNDAMENTALS OF PHYSICS I: MECHANICS (4-2).**

This course, intended for Engineering Science students, is offered whenever the combined enrollment in PH 1111 and PH 1121 is sufficiently large to offer more than one segment. It is identical to PH 1121 except that it is taught at a pace at which the students can comfortably progress, with the result

that somewhat less material may be covered than in PH 1121. **PREREQUISITE:** A course in calculus (may be taken concurrently).

**PH1121 PHYSICS I: MECHANICS (4-2).**

Vector algebra, particle kinematics in one and two dimensions, Newton's laws of motion, particle dynamics, work and energy, conservation of energy, systems of particles, conservation of momentum, rotational kinematics and dynamics, gravitation, simple harmonic motion. **PREREQUISITE:** A course in calculus (may be taken concurrently).

**PH1312 FUNDAMENTALS OF PHYSICS II: ELECTRICITY AND MAGNETISM (4-2).**

This course, intended for Engineering Science students, is offered whenever the combined enrollment in PH 1312 and PH 1322 is sufficiently large to offer more than one segment. Topics covered are the same as in PH 1322, but there are two hours of problem sessions each week rather than one. **PREREQUISITE:** PH 1111 or PH 1121 or equivalent.

**PH1322 PHYSICS II: ELECTRICITY AND MAGNETISM (4-1).**

Electric charge, Coulomb's Law, electric field, Gauss' Law, electrical potential and energy, capacitors and dielectrics, current and resistance, EMF and DC circuits, magnetic field, Ampere's Law, Faraday's Law, inductance, electromagnetic oscillations, AC circuits, Maxwell's Equations, electromagnetic waves. **PREREQUISITE:** PH 1111 or Ph 1121 or equivalent.

Upper Division Courses

**PH2001 PHYSICS THESIS OPPORTUNITIES (1-0).**

This course is designed for students interested in choosing and pursuing a Master's thesis in physics. Members of the faculty of the Department of Physics having research projects suitable for Master's degree theses will give presentations on their projects. The course is given in the pass/fail mode. **PREREQUISITE:** At least 7 quarter-hours of physics courses.

**PH2012 PHYSICS LABORATORY I (3-2).**

Introduction to data acquisition and analysis. Statistical analysis of data. Estimation and propagation of error. Graphical techniques of data presentation and linear regression analysis for linear and linearized two parameter functions. Distribution functions and hypothesis testing. Transduction, transfer functions and instrumentation. Sampling, digitization and their associated errors. Computer controlled data acquisition. **PREREQUISITE:** A course in basic physics and a course in calculus.

**PH2013 PHYSICS LABORATORY II (2-2).**

The second course in a two quarter sequence on laboratory measurements and analysis techniques. Fourier analysis, signals in noise, phase sensitive detection, convolution and de-convolution, time windowing, and averaging. **PREREQUISITE:** PH2012.

**PH2119 OSCILLATION AND WAVES (4-2).**

An introductory course designed to present mechanics to students studying acoustics. Kinematics, dynamics, and work and energy consideration for the free, damped, and driven oscillators. The wave equation for trans-

verse vibration of a string, ideal and realistic boundary conditions, and normal modes. Longitudinal and transverse waves in bars. Transverse waves on rectangular and circular membranes. Vibrations of plates. Laboratory periods include problem sessions and experiments on introduction to experimental techniques and handling of data; the simple harmonic oscillator analog; transverse waves on a string; and transverse, longitudinal, and torsional waves on a bar. **PREREQUISITE:** Courses in differential equations and basic physics.

**PH2151 MECHANICS I - PARTICLE MECHANICS (4-1).**

After a review of the fundamental concepts of kinematics and dynamics, this course concentrates on those two areas of dynamics of simple bodies which are most relevant to applications in Weapon Systems Engineering: vibrations and projectile motion. Topics include: damped and driven oscillations, projectile motion with atmospheric friction, satellite orbits, and rotating coordinate systems. **PREREQUISITES:** PH 1121 or equivalent; MA 2121 or equivalent course in ordinary differential equations (may be concurrent).

**PH2203 TOPICS IN BASIC PHYSICS: WAVES AND OPTICS (4-0).**

A course to provide physical background to wave motion, acoustics, and optics for students in the Electronic Warfare Curriculum, and to provide applications of analytical techniques to physical problems. Areas covered are harmonic motion-differential equations, complex notation, damped vibration and resonance; wave motion (properties of waves, sound waves, electromagnetic waves, light waves, optics), geometrical and wave optics. **PREREQUISITES:** MA 2138 and MA 2047 (may be taken concurrently).

**PH2207 FUNDAMENTALS OF ELECTRO-OPTICS (4-0).**

This course is designed to provide students in interdisciplinary curricula with specific prerequisite background for electro-optics courses in those curricula. Topics discussed include: matrix formulation of optics, catoptric and catadioptric systems, diffraction, behavior of gaussian profile beams, Fourier optics and resolution, atmospheric transmission, atomic and molecular energy states, line shapes, band theory of semiconductors, the p-n junction, light emitting diodes, stimulated emission, and lasers. **PREREQUISITES:** MA 3139 and PH 2304 (or equivalent).

**PH2223 PHYSICS III: OPTICS (4-2).**

Geometrical optics; reflection and refraction of rays at plane and spherical surfaces; mirrors, plane and spherical; lenses, thick lenses and lens aberration; matrix methods for thick lenses and lens systems. Physical optics, wave equation, phase and group velocity. Fourier transforms, interference, diffraction, polarization, birefringence. **PREREQUISITES:** PH 1322 and a course in differential equations.

**PH2304 TOPICS IN BASIC PHYSICS: ELECTROMAGNETISM (2-0).**

This course follows PH2203 in the Electronic Warfare Systems Engineering curriculum. Basic concepts of electric and magnetic fields are introduced and their interaction with charges and currents discussed. The experimental laws are used to develop Maxwell's Equations, and simple solutions to these equations are considered. The course is normally taught in a six week period. **PREREQUISITES:** PH 2203 or equivalent, and mathematics through vector analysis and ordinary differential equations.

**PH2351 ELECTROMAGNETISM (4-1).**

Electrostatic fields in vacuum and dielectrics, Poisson's and Laplace's equations, electrostatic energy, electric current. The magnetic field of steady currents, Biot-Savart and Ampere's Laws, vector potential, magnetic properties of matter. Electromagnetic induction and Faraday's Law. Magnetic energy. Maxwell's Equations. **PREREQUISITES:** PH 1322 or equivalent, MA 2047 or equivalent.

**PH2401 INTRODUCTION TO THE SONAR EQUATIONS (3-0).**

A discussion of each term of the sonar equations, with application to the detection, localization, and classification of underwater vehicles. Topics include ray acoustics, simple transmission loss models, tonals, spectrum and band levels, directivity index, array gain, doppler shift, and detection threshold. This course is intended primarily for students in the Antisubmarine Warfare curriculum and is given in a "structured" PSI mode. **PREREQUISITE:** Precalculus mathematics.

**PH2410 ANALOG ELECTRONICS AND SIGNAL CONDITIONING FOR ACOUSTICS (3-2).**

Applications of simple integrated circuits to acoustical measurements including op-amp filters and amplifiers, voltage controlled oscillators, D-to-A, A-to-D, and frequency-to-voltage converters. Sources of noise (thermal and quantization) in electro-acoustic systems. Techniques of noise reduction in the frequency and time domains including signal integration and time averaging, digital and analog Fourier analysis, phase sensitive detection and time domain auto- and cross-correlation analysis. **PREREQUISITES:** PH 2012 and EC 2170.

**PH2511 INTRODUCTION TO ORBITAL MECHANICS (4-0).**

The gravitational two-body problem. Elliptic orbits and orbital elements. Orbital maneuvers and transfers. Time of flight. Ground track. Additional topics selected from the following: suborbital trajectories, hyperbolic trajectories, orbit determination from radar data, and orbital perturbations. **PREREQUISITES:** A course in Basic Mechanics (including vectors) and a course in ordinary differential equations.

**PH2601 SURVEY OF MODERN PHYSICS (4-1).**

This is a one term course covering the fundamentals of modern physics with selected applications. Topics include special relativity, the wave-particle duality, the Schrodinger equation, atoms and molecules, lasers, semiconductors, and superconductors. **PREREQUISITE:** PH 2223.

**PH2681 INTRODUCTORY QUANTUM PHYSICS (4-2).**

Special relativity plus the fundamental concepts of quantization in modern physics. Topics include the Bohr atom, blackbody radiation, wave-particle duality, the Schrodinger equation and its application to potential barriers and wells, and to the harmonic oscillator and the hydrogen atom. Also the Pauli exclusion principle, spin and angular momentum. **PREREQUISITE:** PH 2223. A Course in theoretical physics (PH 3990) desirable but not mandatory.

**PH2724 PHYSICS IV: THERMODYNAMICS (4-0).**

Equations of state; the concepts of temperature, heat and work; the first law of thermodynamics; heat engines and refrigerators; entropy and the second law of thermodynamics; thermodynamic potentials; phase

equilibrium; kinetic theory; equipartition theorem; transport phenomena. **PREREQUISITES:** PH 1121 and a course in multivariable calculus.

**PH2810 SURVEY OF NUCLEAR PHYSICS (4-0).**

An introduction to the basic concepts of nuclear physics with emphasis on neutron physics and nuclear reactors. Atomic nature of matter, wave particle duality, energy levels. Basic nuclear properties, radioactivity, neutron reactions. Elements of fission and fusion reactors. **PREREQUISITE:** Basic Physics.

**PH2911 INTRODUCTION TO COMPUTATIONAL PHYSICS (2-2).**

An introduction to the role of computation in modern physics, with emphasis on the programming of current physics problems. Includes an introduction to mainframe operations in both the time-sharing and batch environments. Algorithmic design and structured programming will be emphasized. Exercises, chosen to emphasize physical objectives, will be assigned in FORTRAN. **PREREQUISITE:** A Basic Physics course.

Upper Division or Graduate Courses

**PH3002 NON-ACOUSTIC SENSOR SYSTEMS (4-0).**

This course covers the physical principles underlying the operation of a number of operational and proposed non-acoustic sensor systems. Geomagnetism, magnetometers and gradiometers, MAD signatures, optical and IR transmission in the atmosphere and in sea water. Image Converter, FLIR and radar systems for ASW. Exotic detection schemes. **PREREQUISITES:** PH 3306, EO 3720, SECRET clearance.

**PH3006 WEAPONS SYSTEMS AND WEAPONS EFFECTS (4-0).**

This course will cover technical aspects of three areas of modern weapons systems: Nuclear weapons and effects on personnel, equipment and structures; principles of directed energy weapon concepts and their interactions with targets; space based defense system concepts. **PREREQUISITE:** SE 3301 or equivalent.

**PH3152 MECHANICS II - EXTENDED SYSTEMS (4-1).**

The principles of dynamics are applied to real extended bodies. Topics include: principles of rocket propulsion, rotational motion of axisymmetric bodies and its application to projectile spin and gyroscopic motion. An introduction to generalized methods of description of dynamic systems is given and the general behavior of complex vibrating systems is studied. **PREREQUISITE:** PH 2151.

**PH3161 FLUID DYNAMICS (4-1).**

This course emphasizes the dynamics of real compressible fluids. The basic properties of fluids are introduced and the concepts of fluid kinematics, stress, and strain are discussed. Both the control volume and differential equation approaches are applied to the flow of viscous fluid. The laws of similarity are developed, and the significance of Reynolds, Fraude, and Mach number discussed. Topics covered include laminar and turbulent flow, isentropic subsonic channel flow, supersonic flow in nozzels, and two-dimensional supersonic flow. **PREREQUISITE:** PH 2151 or equivalent.

**PH3166 PHYSICS OF UNDERWATER VEHICLES (4-2).**

This course emphasizes the dynamics of real incompressible liquids. The basic properties of fluids are introduced and the concepts of fluid kinematics, stress, and strain are discussed. Both the control volume and the differential equation approaches are

applied to the flow of a viscous fluid. The laws of similarity are developed, and the significance of Reynolds, Fraude, and Mach numbers are discussed. Topics covered include laminar flow, turbulent flow, boundary layer theory, and the calculation of lift and drag. One or more special topics may be discussed (surface waves, cavitation, and the fluid-dynamic generation of sound) depending upon the interests of the instructor and students. **PREREQUISITE:** PH 2151 or equivalent.

**PH3208 ELECTRO-OPTIC PRINCIPLES AND DEVICES (4-1).**

This course is designed to provide students in inter-disciplinary programs with a general understanding of the principles and capabilities of the component devices comprising military electro-optic and infrared systems. Topics treated include: atmospheric extinction, turbulence, thermal blooming and breakdown, adaptive optics, thermal radiation, target signatures, backgrounds, electro-optic and acousto-optic devices, reticles and other trackers, detector characteristics, noise and cooling, television, CCD, CID and scanning imagers. Laboratory work provides hands-on familiarity with these devices. This course is taught in a six week period. **PREREQUISITES:** PH 2203, PH 2207, MA 3139 or equivalent.

**PH3252 ELECTRO-OPTICS (4-0).**

This course treats the properties of electro-optic systems together with the basic physical principles involved. Topics included are: diffraction and Fourier transform methods; optical data processing; Fresnel equations, evanescent waves, film and fiber optics; Gaussian beams and laser resonators; molecular spectra, transition probability, line widths, and laser gain; specific lasers, Q-switching and mode locking; semi-conductors, junction diodes, photodetection, light emitting diodes and diode lasers. **PREREQUISITES:** PH 3352 and PH 3683.

**PH3352 ELECTROMAGNETIC WAVES (4-0).**

Maxwell's Equations. Energy density and Poynting vector, boundary conditions. Polarization. Propagation of uniform plane waves in vacuum, dielectrics, conducting media (with emphasis on sea water) and low-density neutral plasmas. Reflection and refraction at plane dielectric and conducting boundaries, at normal and oblique incidence. Rectangular wave guides. PREREQUISITE: PH 2351.

**PH3360 ELECTROMAGNETIC WAVE PROPAGATION (4-1).**

Introduction to vector fields and the physical basis of Maxwell's Equations. Wave propagation in a vacuum, in dielectrics and conductors and in the ionosphere. Reflection and refraction at the interface between media. Guided waves. Radiation from a dipole. PREREQUISITES: MA 2121 and a course in basic electricity and magnetism.

**PH3402 UNDERWATER ACOUSTICS (4-1).**

The third of a four-course sequence in acoustics for students in the ASW curriculum, this course is an analytical study of those aspects of underwater sound that influence the sonar equations. Topics include: The wave equation in fluids; acoustic properties of fluids; plane, spherical, and cylindrical waves; absorption of sound in sea water; simple sources; transducer properties and sensitivities; surface interference; three-element array; normal and oblique incidence reflection and transmission at boundaries; image theory and the shallow-water channel; continuous line source and the plane circular piston; radiation impedance; linear arrays with steering; the Eikonal Equation and ray theory. Laboratory experiments include advanced acoustic instrumentation, longitudinal waves in an air-filled tube, surface interference, properties of underwater transducers, and the 3-element array. PREREQUISITES: PH 2119 or equivalent, and PH 2401.

**PH3410 FIBER-OPTIC SYSTEMS FOR ACOUSTICS (3-2).**

Introduction to the physics of electro-optical sources (lasers and LED's) and photodetectors and the principles of light propagation in optical fibers. Fiber-optic communication system considerations including component specification, data rates and power budget. Introduction to fiber-optic sensor systems. PREREQUISITES: PH 2410, PH 3660 and EC 2500.

**PH3451 FUNDAMENTAL ACOUSTICS (4-2).**

Development of, and solutions to, the acoustic wave equation in fluids. Propagation of plane, spherical and cylindrical waves in fluids, sound pressure level, intensity, and specific acoustic impedance. Normal and oblique incidence reflection and transmission from plane boundaries. Transmission through a layer. Image theory and surface interference. Sound absorption and dispersion for classical and relaxing fluids. Acoustic behavior of sources and arrays, acoustical reciprocity, continuous line source, plane circular piston, radiation impedance, and the steered line array. Transducer properties, sensitivities, and calibration. Laboratory experiments include longitudinal waves in an air-filled tube, surface interference, properties of underwater transducers, three-element array, speed of sound in water, and absorption in gases. PREREQUISITES: PH 2219 and PH 2724.

**PH3452 UNDERWATER ACOUSTICS (4-2).**

This course is a continuation of PH 3451. Lumped acoustic elements and the resonant bubble. Introduction to simple transducers. Normal modes in rectangular and cylindrical enclosures. Steady-state response of acoustic waveguides of constant cross section, propagating and evanescent modes, and group and phase speeds. Transmission

of sound in the ocean, the Eikonal Equation and necessary conditions for ray theory, and refraction and ray diagrams. Sound propagation in the mixed layer, the convergence zone, and the deep sound channel. Passive sonar equation, ambient noise, and doppler effect and bandwidth considerations. Active sonar equations, target strength and reverberation. Laboratory experiments include Helmholtz resonators, normal modes in rectangular, cylindrical, and spherical enclosures, water-filled waveguide, noise analysis, impedance of a loudspeaker. PREREQUISITE: PH 3451.

#### **PH3458 NOISE, SHOCK AND VIBRATION CONTROL (4-0).**

The application of the principles of acoustics and mechanics to the problems of controlling noise, vibration and mechanical shock. Topics include linear mechanical vibrations; introduction to vibrations of non-linear systems; damping mechanisms; vibration and shock isolation; noise generation and control; effects of noise on man; application to problems of Naval interest such as ship quieting and industrial noise control. PREREQUISITE: A course in acoustics.

#### **PH3461 EXPLOSIVES AND EXPLOSIONS (4-0).**

Explosives terminology; thermochemistry of explosive decomposition; the detonation state; explosives safety. Generation and propagation of explosive shock waves in air; Rankine-Hugoniot equations; scaling laws; normal, oblique, and Mach reflection. Dynamic blast loads and corresponding structure response. PREREQUISITE: PH 2724 or equivalent.

#### **PH3479 PHYSICS OF UNDERWATER WEAPONS (4-0).**

The basic physics of underwater weapons from launch through explosion are addressed using a modern acoustic torpedo to illustrate practical applications. Topics

include initial inputs, water entry, power plants, propulsors, drag and drag reduction, stability and control, guidance, acoustic search, terminal homing, exploders, and explosions. An historical summary of U.S. torpedoes and depth charges and a review of current NATO and Soviet torpedoes are also presented. PREREQUISITES: A course in acoustics and a SECRET NOFORN clearance.

#### **PH3513 INTERMEDIATE ORBITAL MECHANICS (2-0 to 4-0).**

Orbital perturbations due to various sources, such as atmospheric drag and lunar tidal effects. Interplanetary trajectories. Additional topics depending on hours assigned to course. PREREQUISITE: PH 2511.

#### **PH3514 INTRODUCTION TO THE SPACE ENVIRONMENT (4-0).**

Plasma concepts. Solar structure and magnetic field, particle and electromagnetic emissions from the sun, the geomagnetic field and the magnetosphere; radiation belts, structure and properties of the earth's upper atmosphere, ionosphere, the effects of man in the space environment. PREREQUISITES: PH 2511 and a course in basic electricity and magnetism.

#### **PH3683 INTERMEDIATE QUANTUM PHYSICS (4-1).**

Applies the fundamental concepts of quantum physics to the development and application of theoretical methods for dealing with real systems. Topics covered: Orthogonal expansions, time independent and time dependent perturbation theory. Helium and multi-electron atoms and spectra. The periodic table, diatomic molecules, lasers, solids, and semiconductors. PREREQUISITES: PH 2681, PH 3990, and PH 3782 (the latter may be taken concurrently).

**PH3782 THERMODYNAMICS AND STATISTICAL PHYSICS (4-0).**

Entropy, temperature, Boltzmann factor and Gibbs factor are developed from a quantum point of view. Blackbody radiation, chemical potential, partition function, Gibbs sum and applications to an ideal gas are covered. Fermi-Dirac and Bose-Einstein statistics and applications to degenerate systems. Gibbs free energy, Helmholtz free energy, enthalpy, kinetic theory, phase transformations, chemical reactions. PREREQUISITE: PH 2681

**PH3855 NUCLEAR PHYSICS (4-2).**

This is the first in a sequence of graduate specialization courses on nuclear weapons and their effects. This course deals with the necessary underlying principles of nuclear physics, including nuclear forces, models, stability, reactions and decay processes, and interaction of high energy particles with matter. The laboratory includes radiation detection techniques and statistics of counting. PREREQUISITES: PH 3152, PH 3360, and PH 3683 or equivalents.

**PH3911 SIMULATION OF PHYSICAL SYSTEMS (3-1).**

Comparisons between simulation, theory and experimentation as techniques of scientific investigation. Computer simulation methodology and techniques: Monte Carlo and deterministic simulations, variance reduction and analysis of results. Applications from physics and/or weapons performance. There is a one-hour applications laboratory. PREREQUISITE: MA 3400, or OS 3602, or consent of instructor.

**PH3990 METHODS OF THEORETICAL PHYSICS (4-0).**

A selection of mathematical techniques applied to specific problems drawn from physical systems, such as classical waves, scattering, electrodynamics, resonant cavities,

incompressible flow, dielectric and magnetic media, heat conduction, Fourier optics, and quantum mechanics. Topics may include complex variables, series solutions of differential equations, special functions, Sturm-Liouville theory, eigenfunction expansions, partial differential equations, Fourier analysis, and Green's functions. PREREQUISITES: MA 2089, MA 2121, and a sequence of courses in basic physics.

**PH3998 SPECIAL TOPICS IN INTERMEDIATE PHYSICS (V-0).**

Study in one of the fields of intermediate physics and related applied areas selected to meet special needs or interest of students. The course may be conducted as a seminar or supervised reading in different topics. PREREQUISITES: A 2000 level course appropriate to the subject to be studied, and consent of the Department Chairman. The course may also be taken on the Pass/Fail basis provided the student has requested so at the time of enrollment.

Graduate Courses

**PH4054 PARTICLE BEAM AND HIGH ENERGY LASER WEAPON PHYSICS (4-0).**

This course is an in-depth study into the beam weapon concepts. Topics covered are: relativistic electron beams; their equilibrium, propagation losses and stability; giant power accelerator concepts; target interaction; proton beams; neutral particle beams, their production and limitations; high power microwave beams, high energy laser beams, their production, atmospheric propagation and control and their interaction with targets. PREREQUISITES: PH 3352, PH 2151 or equivalent. Courses in electromagnetism and mechanics. SECRET clearance.

**PH4162 MECHANICS OF CONTINUA (3-0).**

The foundations of fluid mechanics presented in the tensor formulation. Scalars, vectors, and tensors. Tensor differential and integral calculus. The stress tensor and rate of deformation tensor. Principal values, deviators, and other invariants. Fundamental laws: conservation of mass, linear momentum, angular momentum, and energy. Constitutive equations. Non-Newtonian fluids. Visco-Plastic materials. **PREREQUISITES:** PH 3161 or equivalent.

**PH4209 EO/IR SYSTEMS AND COUNTERMEASURES (3-2).**

This unclassified course for students in interdisciplinary curricula treats the military applications of electro-optic systems, including IR and EO seekers and trackers, surveillance and missile warning systems, and laser rangefinders and designators. Scanning FLIR andIRST systems and array applications will be included. Signature suppression and generic active and passive countermeasure approaches will be discussed. Laboratory work will deal with EO/IR devices and possible countermeasure techniques. **PREREQUISITES:** PH 3208, MA 3139.

**PH4253 SENSORS, SIGNALS, AND SYSTEMS (4-2).**

This course treats the physical phenomena and practical problems involved in sensor systems for electromagnetic signals in the EO/IR range. Topics included are: optical modulation, nonlinear optics, acousto-optics; atmospheric molecular absorption characteristics and mechanisms of detectors for optical and infrared radiation, noise in detectors, cooling systems; image intensifiers, television and FLIR systems; detecting, tracking and homing systems; signal sources, target signatures and backgrounds; laser target designators, laser radars, the range

equation. The laboratory will include experiments related to this material as well as to that of the preceding course, PH 3252. **PREREQUISITES:** PH 3252 and a course in electromagnetism.

**PH4254 THERMAL IMAGING AND SURVEILLANCE SYSTEMS (4-0).**

This course is intended as a capstone course to follow the sequence PH 3252 and PH 4253, or the sequence PH 2207 and PH 3208. It will address the system analysis and technology of infrared imaging and search/track systems, including the derivation of system performance measures such as Minimum Detectable Temperature Difference (MDT) and Minimum Resolvable Temperature Difference (MRTD) in terms of the optics, scanner, detectors, display, and human operator characteristics. Performance Prediction codes and Tactical Decision Aids (TDAs) will be analyzed for current Forward Looking Infrared (FLIR) Systems, and comparable codes forIRSTs discussed. Criteria for target detection and transference of contrast will be compared. Integrated Focal Plane Array Technology will be explored for application to second generation FLIR and Staring Imager development. **PREREQUISITE:** PH 3208 or PH 4253 or consent of instructor.

**PH4283 LASER PHYSICS (4-0).**

The physics of lasers and laser radiation. Topics will include: spontaneous and stimulated emission, absorption, interaction of radiation with matter, line broadening mechanisms, optical and electrical pumping, gain, properties of laser beams. Gaussian beams, stable and unstable resonators, rate equations, output coupling, mode locking, short pulsing, specifics of solid state and gas laser systems, high energy and high power lasers, laser-surface interaction, air breakdown, laser supported detonation waves, laser isotope separation, and laser fusion. **PREREQUISITE:** PH 3252 or equivalent, or consent of instructor.

**PH4353 TOPICS IN ADVANCED ELECTRICITY AND MAGNETISM (4-0).**

Electromagnetic radiation, including radiation from antennas and accelerating particles, and radiation scattering from charged particles. Additional topics may include Cerenkov radiation, free electron lasers, and the relativistic formulation of electrodynamics. **PREREQUISITES:** PH 3352 and PH 3990 or equivalent.

**PH4371 CLASSICAL ELECTRODYNAMICS (3-0).**

Tensors in special relativity. Classical relativistic electromagnetic field theory. Lorentz electron theory. **PREREQUISITES:** PH 4353 and familiarity with the special theory of relativity and Lagrangian mechanics.

**PH4403 ADVANCED TOPICS IN UNDERWATER ACOUSTICS (4-1).**

The last in a sequence of courses in acoustics for students in the ASW curriculum, this course is a continuation of PH3402. Topics include: Review of the sonar equations, normal modes in enclosures, steady-state response of isospeed acoustic waveguides, propagating and evanescent modes, group and phase speeds, the wave equation with a source term, the point source in cylindrical coordinates, transmission loss models for isospeed shallow water channel with fluid bottom, the parabolic equation, and the parametric array. Laboratory experiments include analysis of underwater noise, normal modes in a rectangular cavity, and acoustic waveguides. **PREREQUISITE:** PH 3402 or equivalent.

**PH4410 ADVANCED ACOUSTICS LABORATORY (1-6).**

Advanced laboratory projects in acoustics. Through the performance of experiments drawn from diverse fields of acoustics, the student is introduced to the problems and opportunities of acoustics research. For

each experiment the student is guided through the scientific literature on the subject, the construction of the equipment, the collection and analysis of the data, and the writing of a research report. **PREREQUISITE:** PH 3452.

**PH4453 SCATTERING AND FLUCTUATION OF SOUND IN THE OCEAN (4-0).**

An advanced treatment of the effects of variations of the ocean and its boundaries on ocean noise and the scattering and fluctuation of sound. Topics include: multipole radiation fields and noise sources in the sea, coherence and incoherence, probability density functions, the Helmholtz integral and general scattering formalism, scattering from objects, correlations and frequency spectra of sound scattered from rough boundaries, fluctuations associated with variability in the medium. **PREREQUISITE:** PH 3452 or consent of instructor.

**PH4454 TRANSDUCER THEORY AND DESIGN (4-2).**

A treatment of the fundamental phenomena basic to the design of transducers for underwater sound, specific examples of their application and design exercises. Topics include piezoelectric, magnetostrictive and hydromechanical effects. Laboratory includes experiments on measurement techniques, properties of transducer materials, characteristics of typical transducer types, and a design project. **PREREQUISITE:** PH 3452 (may be taken concurrently).

**PH4455 SOUND PROPAGATION IN THE OCEAN (4-0).**

An advanced treatment of the subject. Topics include: Reflection of spherical waves from ocean boundaries. Normal mode propagation of sound. Inhomogeneous wave equation and the point source in cylindrical coordinates. Shallow water channel with fluid and solid bottoms. The deep sound channel and the WKB approximation. Range-depen-

dent channels. Adiabatic normal modes and the parabolic equation. Multi-path propagation. Application to Arctic ocean acoustics. PREREQUISITE: PH 4453 or consent of instructor.

**PH4456 SEMINAR IN APPLICATION OF UNDERWATER SOUND (3-0).**

A study of current literature on application of acoustics to problems of Naval interest. PREREQUISITE: PH 3406 or PH 3452 or PH 4403 or consent of instructor.

**PH4459 SHOCK WAVES AND HIGH-INTENSITY SOUND (3-0).**

Nonlinear oscillations and waves on strings. The nonlinear acoustic wave equation and its solution. The parametric array. The physics of shock waves in air and in water. PREREQUISITE: PH 3451.

**PH4515 PHYSICS OF THE SATELLITE ENVIRONMENT (3-0).**

A graduate level treatment of the structure and properties of the near earth space environment and some aspects of solar physics. Topics (usually two per quarter) are chosen from: ionospheric composition, ionospheric radio wave propagation, structure of the magnetosphere, the geomagnetic field, solar structure and emissions. PREREQUISITES: PH 3514 and a 3000 level course in electromagnetism. Some background in plasma physics is desirable.

**PH4516 SPACECRAFT-ENVIRONMENT INTERACTIONS (3-0).**

The interactions between satellites and their environment as they apply to the design and operation of satellites. These interactions include neutral gas drag and debris, electrical effects of energetic plasmas, and radiation effects due to particles. Physical interactions are emphasized, leading to an understanding of the impact on operating systems. PREREQUISITE: PH 3514.

**PH4531 INTRODUCTION TO ASTROPHYSICS (4-0).**

Introduction to theories of stellar structure, energy transport in stars, and stellar evolution. Recent advances in solar physics. Supernovae, pulsars, black holes, and the origin of the universe will be topics of discussion. PREREQUISITES: PH 3152 and PH 3352.

**PH4661 PLASMA PHYSICS I (4-0).**

This course constitutes a broad study of the behavior and properties of gaseous plasma, the fourth - and most abundant - state of matter in the universe. Plasma physics is a vigorously developing branch of contemporary physics. Its many applications are in areas such as astro and space-physics, atomic physics, magneto-hydrodynamic power generation, electron beam excited laser, laser isotope enrichment, ionospheric communication, thermonuclear fusion, and high energy beam weapons. The physical concepts fundamental to various branches of plasma physics are introduced. Topics covered include single particle motions in electromagnetic fields, orbit theory, collision phenomena, breakdown in gases, and diffusion. The magneto-hydrodynamic and the two-fluid plasma models are considered. PREREQUISITE: PH 3360 or equivalent.

**PH4662 PLASMA PHYSICS II (3-0).**

A continuation of Plasma Physics I. Applications of the hydromagnetic equations to the study of macroscopic motions of plasma. Equilibrium and stability. Classification of plasma instabilities. Kinetic theory, the Boltzmann equation and the macroscopic-momentum transport equation. Plasma oscillations and Landau damping. Nonlinear effects, shock waves, radiations from plasma, including bremsstrahlung and cyclotron radiation. Controlled fusion and laser produced plasmas. PREREQUISITE: PH 4661 or consent of instructor.

**PH4663 ADVANCED PLASMA PHYSICS (3-0).**

Selected topics in plasma physics, such as laser-target interaction, dynamics of a laser-produced plasma, self-generated magnetic fields, plasma surface interactions, unipolar arcing, plasma opening switch. PREREQUISITE: PH 4662 or consent of instructor.

**PH4750 RADIATION EFFECTS IN SOLIDS (4-0).**

An introduction to solid state physics with emphasis on solid state semiconductor devices is given. Radiation damage mechanisms, TREE and technical aspects relating to hardening of components and systems are discussed in depth. PREREQUISITES: PH 3352 and PH 3683.

**PH4751 SEMICONDUCTOR PHYSICS. (4-0).**

Basic physics of semiconductor devices. Band model of solids, carriers (holes and electrons), Fermi function, description of diodes, device fabrication techniques, current and capacitance, various doping distributions, transistors. PREREQUISITE: PH 3683, or consent of Instructor.

**PH4760 SOLID STATE PHYSICS (4-0).**

Fundamental theory dealing with solids: crystals, binding energy, lattice vibration, dislocations and mechanical properties, free electron theory, band theory, properties of semi-conductors and insulators, magnetism. PREREQUISITES: PH 3683 and PH 3782 (the latter may be taken concurrently).

**PH4771 STATISTICAL PHYSICS I (3-0).**

Kinetic theory and the Boltzmann theorem, configuration and phase space, the Liouville theorem, ensemble theory, microcanonical, canonical and grand canonical ensembles, quantum statistics. PREREQUISITES: PH 3152, PH 3683, and PH 3782.

**PH4772 STATISTICAL PHYSICS II (3-0).**

A continuation of PH 4771 with applications to molecules, Bose-Einstein gases, Fermi-Dirac liquids, and irreversible processes. PREREQUISITE: PH 4771.

**PH4783 ADVANCED STOCHASTIC PHYSICS (3-0).**

Stochastic Physics deals with nonlinear nonequilibrium statistical mechanics, often using and generalizing methods and concepts of equilibrium Statistical Physics. The interplay between deterministic and random forces to generate organization, especially in large-scale systems, will be studied using methods of solution of multivariate rate equations, and some use of their representations as diffusion systems. Specific applications will be stressed; e.g., to physical systems such as lasers. PREREQUISITE: PH 3782 or PH 3990.

**PH4856 PHYSICS OF NUCLEAR EXPLOSIONS (4-0).**

This second course in the nuclear weapons effects graduate specialization sequence considers in-depth questions of weapon designs and their specific output environments which are created by the nuclear explosion. Topics are: principles affecting weapon yield efficiency; explosion phenomenology in various ambient environments, blast and shock, thermal radiation, X-rays and gamma rays, neutron fluxes, electromagnetic pulse, radioactive fallout models. PREREQUISITES: PH 3855 and SECRET clearance.

**PH4857 RADIATION HYDRODYNAMIC TRANSPORT THEORY (4-0).**

This course collects in systematic fashion most of the physical ingredients of the large Radiation-Hydrodynamic Computer Codes for nuclear weapon development, nuclear explosion phenomena, particle beam trans-

port, and beam-target interaction. Topics are: Boltzmann transport equation, general theory of transport processes in multi-component gases with reactions and ionization; radiation transport theory; opacity models; shock front structure. PREREQUISITES: PH 4856 and SECRET clearance.

#### PH4881 ADVANCED NUCLEAR PHYSICS (3-0).

Topics selected from: relativistic mechanics, scattering of electrons from nuclei, nuclear potentials, relativistic treatment of the electron using the Dirac equation and application to electron scattering to develop the Mott cross-section; treatment of form-factors arising from electron-nucleon and electron-nucleus scattering; application of electron scattering to study the structure of nuclear matter and the study of nucleon models. PREREQUISITE: PH 3855 or equivalent.

#### PH4885 REACTOR THEORY (3-0).

The diffusion and slowing-down of neutrons. Homogeneous thermal reactors, time behavior; reactor control. Multigroup theory. Heterogeneous systems. PREREQUISITE: PH 3855 or equivalent.

#### PH4911 WEAPONS SYSTEMS SIMULATIONS (1-2).

Critical design parameters in the development of complex modern weapons systems are often determined by computer simulation of weapons systems effectiveness in various physical environments and combat scenarios. In this course, the principles and techniques of a particular weapons systems simulation will be studied, and hands-on experience will be gained in the use of a simulation for design parameter sensitivity studies. PREREQUISITE: PH 3911 or equivalent.

#### PH4971 QUANTUM MECHANICS I (3-0).

Review of Lagrange's and Hamilton's equations of motion. Poisson brackets. General

principles of non-relativistic quantum mechanics; stationary states. PREREQUISITES: PH 2681 and PH 3152.

#### PH4972 QUANTUM MECHANICS II (3-0).

Addition of angular momenta; scattering theory; additional topics of interest to students and instructor. PREREQUISITE: PH 4971.

#### PH4973 QUANTUM MECHANICS III (3-0).

General principles of relativistic quantum mechanics. Properties and solutions of relativistic wave equations. PREREQUISITES: PH 4371 and PH 4971.

#### PH4984 ADVANCED QUANTUM PHYSICS (4-0).

Quantum mechanics in the Dirac format. Angular momentum, spin, spin resonance. Additional topics may include group theoretical applications to selection rules and crystal fields, variational principles, self-consistent fields in the many-electron atom, scattering theory, and polyatomic molecules. PREREQUISITE: PH 3683.

#### PH4991 RELATIVITY AND COSMOLOGY (3-0).

Einstein's general theory of relativity. The three classical tests. The Schwarzschild singularity and black holes. Cosmological models and their relations with observations. Introduction to modern developments; gravitational waves, problems of quantum cosmology and superspace. PREREQUISITE: PH 4371.

#### PH4998 SPECIAL TOPICS IN ADVANCED PHYSICS (V-0).

Study in one of the fields of advanced physics and related applied areas selected to meet special needs or interests of students. The course may be conducted as a seminar or supervised reading. The course carries a letter grade and may be repeated in different topics. PREREQUISITES: A 3000 level course appropriate to the subject

to be studied, and consent of the Department Chairman. It may also be taken on a Pass/Fail basis if the student has requested so at the time of enrollment.

### SCIENCE AND ENGINEERING

#### Upper Division Course

#### SE2002 BASIC PHYSICS OF DETECTION SYSTEMS (4-0).

This course is designed to support the Intelligence curriculum by providing an overview of the principles underlying systems whose operations requires the transmission and/or reception of energy. Topics include elements of basic mechanics and electromagnetism, traveling and standing waves, the electromagnetic spectrum and its usage. Elementary calculus will be used.

#### Upper Division or Graduate Courses

#### SE3004 WEAPONS SYSTEMS ANALYSIS (4-0).

This course is designed to support the Intelligence curriculum. It treats the behavior of weapons systems as influenced by the physical properties of the environment and the physical properties of the devices incorporated into the systems. The course material includes: principles of electronic reconnaissance, antennas and their characteristics, factors affecting receiver sensitivity, transmission range, radar principles, the radar equation, optics fundamentals, infrared nomenclature, principles and elements of photographic science, electro-optical systems (with some background in semiconductors), sonar, and non-acoustic ASW (Antisubmarine Warfare). PREREQUISITE: SE 2002 or equivalent.

#### SE3301 RADIATING SYSTEMS (4-0).

This course for students of Operations Research and other Weapons Systems oriented non-engineering curricula discusses the physical principles exploited by information

gathering systems with emphasis on general capabilities and limitations. After a general introduction to wave propagation, topics of discussion are electromagnetic waves, radar, electro-optics including lasers and underwater sound. These topics will be applied to specific systems such as missile guidance, sonobouys, and phased arrays as appropriate to the class and instructor. PREREQUISITES: MA 1116 or equivalent (may be taken concurrently), or by consent of Instructor.

#### Graduate Courses

#### SE4006 TECHNICAL ASSESSMENT OF WEAPONS SYSTEMS (4-0).

This course is designed to support the Intelligence Curriculum. Current technical trends in weapons systems technologies which are expected to significantly affect warfare are investigated. Topics covered are: nuclear weapons and their effects, nuclear strategic balance, satellite orbits, directed energy weapons concepts (SDI), future weapons concepts. PREREQUISITES: SE 3004 or equivalent, and SECRET clearance.

#### SE4858 NUCLEAR WARFARE ANALYSIS (4-0).

This final course in the nuclear weapons effects graduate specialization sequence deals with technical aspects of strategic and tactical nuclear war. Effects which nuclear weapons explosion environments have on various defense platforms and systems are considered together with methods of hardening to reduce system vulnerability in each of the effected areas: blast and shock, thermal radiation, transient effects on electronics. EMP, biological effects from contamination, atmospheric and ionospheric effects on communication, detection and surveillance systems. PREREQUISITES: PH 3461, PH 4856, and SECRET clearance.

## SPACE SYSTEMS ACADEMIC GROUP

### Chairman:

Rudolf Panholzer, Professor,  
Code 72, Bullard Hall, Room 205,  
(408) 646-2278, AV 878-2278.

The Space Systems Academic Group is an interdisciplinary association of faculty, consisting of twelve members representing eight separate academic disciplines. An academic group is a less formal organization than an academic department, and each professor in the group has an appointment in an academic department. The Space Systems Academic Group has administrative responsibility for the academic content of the Space Systems Operations and the Space Systems Engineering Programs of study. Teaching in these interdisciplinary programs is carried out by faculty members attached to the following academic departments: Administrative Sciences, Aeronautics and Astronautics, Electrical and Computer Engineering, Mathematics, Meteorology, Oceanography, Operations Research and Physics. Thesis topics for students in this area of study are approved by the Group and the final thesis is approved by the Group Chairman in addition to the Academic Department granting the degree (if any).

### GROUP FACILITIES

To provide laboratory experience several facilities have been developed in cooperation with other academic departments.

- (1) Solar Simulation Facility
- (2) Laser Damage Facility
- (3) Linear Accelerator for Sample Irradiation
- (4) Navigational Satellite Receiver Laboratory
- (5) Small Satellite Test & Development Laboratory
- (6) Vibro-Acoustic Test & Measurement Facility
- (7) Access to the Secured Computing Facility for classified research & theses work.

### DEGREE REQUIREMENTS

The Space Systems Engineering students earn a Masters Degree either in Engineering Science or in one of the following academic departments: Aeronautics and Astronautics, Computer Science, Electrical and Computer Engineering, Mechanical Engineering, Physics or Mathematics. Refer to degree requirements for the listed departments.

The Space Systems Operations students are awarded the degree of Master of Science in Systems Technology (Space Systems Operations). A minimum of 45 quarter hours of graduate level work of which at least 15 hours must represent courses at the 4000 level. Graduate courses in at least four different academic disciplines must be included, and, in two disciplines, a course at the 4000 level must be included. Space Systems Operations curriculum has a series of Space-unique and/or Space-oriented courses. These required courses fulfill the requirements of three courses constituting advanced study in an area of specialization. Each student is required to write a thesis which is space-oriented. The study program must be approved by the Chairman of the Space Systems Academic Group.

### GROUP COURSE OFFERINGS

#### SS 0810 Thesis Research (0-0).

Every Student conducting thesis research enrolls in this course.

#### SS 2001 Introduction to Space (4-0).

An overview of space science, technology and policy with emphasis on topics of military interest. Topics usually included are: Space Environment, Orbital Mechanics, Directed Energy Techniques, Space Power Systems, Guidance and Control, Communications, Propulsion and Launch Vehicles, U.S. and Soviet Space Policy and Organization.

# SPACE SYSTEMS

---

## Upper Division or Graduate Courses

### **SS3001 MILITARY APPLICATIONS OF SPACE (4-0).**

Examination of the military functions which utilize space systems and the capabilities of current systems, impact of space operations on military strategy, doctrine and tactics. National space policy and national organizations involved in space policy, DOD and service relationships. Tasking and use of space systems and ground support elements and techniques to reduce vulnerability. Impact of current R&D programs. Requires SECURITY Clearance.

### **SS3900 SPECIAL TOPICS IN SPACE SYSTEMS (Variable).**

Directed study either experimental or theoretical in nature. PREREQUISITE: Consent of Chairman of Space Systems Academic Group and instructor. May be taken on Pass/Fail basis if the student has requested so at the time of enrollment.

## Graduate Courses

### **SS4000 SPACE SYSTEMS SEMINARS AND FIELD TRIPS (0-1).**

Seminars consist of lectures to provide perspective on Space Systems. Field trips expose the student to various space activities such as industry, NASA and DoD laboratories and commands.

### **SS4001 DECISIONS AND SPACE SYSTEMS (4-0).**

Cost-Performance Analysis including mission analysis, measures of performance, and cost models. Study of the evolution of the interaction of technology, economics, and politics in determining space related activities. Discussion of the militarization of space. PREREQUISITES: SS3001, OS3008 or equivalent.

### **SS4002 MILITARY OPERATIONS IN SPACE (4-0).**

Operation of space systems to achieve mission objectives. Periods of vulnerability. Launch windows. Satellite defense: hardening, maneuver, encryption, covert spores, etc. ASAT operations, Launch windows. Weapons in space and threats to space systems. PREREQUISITE: SS2001.

### **SS4900 ADVANCED STUDY IN SPACE SYSTEMS (Variable).**

Directed graduate study based on journal literature, experimental projects, or other sources. PREREQUISITE: Consent of Chairman of Space Systems Academic Group and instructor. May be taken on Pass/Fail basis if the student has requested so at the time of enrollment.

**DEFENSE RESOURCES MANAGEMENT  
EDUCATION CENTER**

**Ralph W. West, Jr.**, Rear Admiral,  
U.S. Navy, Director (1989)\*.

**James Sherman Blandin**, Professor  
(1974), Executive Director; PhD,  
University of Oregon, 1974.

**Donald E. Bonsper**, Adjunct Pro-  
fessor (1982); MS, Naval Postgrad-  
uate School, 1970.

**Robert Edward Boynton**, Associate  
Professor (1970); PhD, Stanford  
University, 1968.

**Earl R. Brubaker**, Professor (1983);  
PhD, University of Washington,  
1964.

**Donald H. Conrad**, Lieutenant  
Colonel, U.S. Army, Instructor  
(1985); MS, Georgia Institute of Tech-  
nology, 1972.

**John E. Dawson**, Professor (1966);  
PhD, Syracuse University, 1971.

**Edwin John Doran**, Adjunct Pro-  
fessor (1975); PhD, University of  
Santa Clara, 1977.

**Peter Carl Frederiksen**, Professor  
(1974); PhD, Washington State Uni-  
versity, 1974.

**Stephen Frederick Hurst**, Lieu-  
tenant Colonel, U.S. Marine Corps,  
Instructor (1989); MS, Naval Post-  
graduate School, 1985.

**Charles J. LaCivita**, Associate Pro-  
fessor (1985); PhD, University of  
California at Santa Barbara, 1981.

**Francois Melese**, Associate Profes-  
sor (1987); PhD, University of Lou-  
vain, Belgium, 1982.

**James H. Morris**, Associate Profes-  
sor (1982); PhD, University of Ore-  
gon, 1976.

**Stephen M. Passarello**, Major, U.S.  
Air Force, Instructor (1987); MS, Air  
Force Institute of Technology, 1981.

**Robert L. Pirog**, Assistant Professor  
(1983); PhD, Columbia University,  
1978.

**Alexander Wolfgang Rilling**, Ad-  
junct Professor (1974); PhD, Univer-  
sity of Southern California, 1972.

**David V. Smith**, Lieutenant Com-  
mander, U.S. Navy, Instructor  
(1989); MS, Naval Postgraduate  
School, 1983.

**Robert von Pagenhardt**, Professor  
(1967); PhD, Stanford University,  
1970.

**Kent D. Wall**, Associate Professor  
(1985); PhD, University of Minne-  
sota, 1971.

**Darnell M. Whitt II**, Associate Pro-  
fessor (1988); PhD, Johns Hopkins  
University, 1977.

**Terry L. Wray**, Lieutenant Com-  
mander, CEC, U.S. Navy, Instructor  
(1986); MS, Naval Postgraduate  
School, 1979.

Emeritus Faculty

**William Ayers Campbell**, Professor  
Emeritus (1970); MSIM, University  
of Pittsburgh Graduate School, 1949.

**Frank Elmer Childs**, Professor  
Emeritus (1965); PhD, University of  
Minnesota, 1956.

**Norman Plotkin**, Professor Emeritus (1969); PhD, Claremont Graduate School, 1969.

**Ivon William Ulrey**, Professor Emeritus (1966); PhD, Ohio State University, 1953.

**Carlton Leroy Wood**, Professor Emeritus (1966); PhD, Heidelberg University, 1936.

*\*The year of joining the Postgraduate School Faculty is indicated in parentheses.*

---

## DEFENSE RESOURCES MANAGEMENT EDUCATION CENTER

Established in 1965 as the Navy Management Systems Center and redesignated to its present title in July 1974, the Defense Resources Management Education Center is a jointly staffed U.S. Department of Defense sponsored educational institution located as a tenant activity at the Naval Postgraduate School. It conducts educational programs in resources management, both in residence at Monterey and on-site, for military officers and civilian defense officials of the U.S. and cooperating foreign nations. The focus of all programs conducted by the Center is on the development of knowledge and improvement of understanding of the concepts, techniques and application of modern defense management, with specific emphasis on analytical decision making. The mission, objectives and responsibilities of the Center are set forth in Department of Defense Directive 5010.35.

The Center currently offers the following resident courses within its facilities at the Naval Postgraduate School:

**DEFENSE RESOURCES MANAGEMENT COURSE** — four weeks in length; presented five times per year.

**INTERNATIONAL DEFENSE MANAGEMENT COURSE** — eleven weeks in length; presented twice a year.

**SENIOR INTERNATIONAL DEFENSE MANAGEMENT COURSE** — four weeks in length; presented once each year (normally in the month of June).

Descriptions of these courses are provided below; detailed information on current quota control agencies and procedures may be found in DOD Publication 5010.16-C (Defense Management Education and Training Catalog) or by calling DRMEC at Autovon 878-2104/Commercial (408) 646-2104.

In addition to its regularly scheduled resident programs, the Center also provides:

**MOBILE EDUCATION COURSES** — normally two or three weeks in length, for U.S. military services and defense agencies, and for foreign governments upon specific request and approval.

**COURSES FOR OTHER AGENCIES** — programs of from two to four weeks duration, resident or on-site, for non-defense federal agencies and state and local governments, upon specific request and approval.

Faculty of the Center are members of the faculty of the Naval Postgraduate School on assignment to the Center.

Since 1966, over 16,000 officials, of whom more than 5,000 represented 82 foreign nations, have participated in programs conducted by the Center.

## DEFENSE RESOURCES MANAGEMENT COURSE

The objective of this four-week course is to provide an appreciation of the concepts, principles, and methods of defense management as they concern planning, programming, budgeting, and related activities. Emphasis is placed on the analytical aspects of

management, stemming from the disciplines of management systems, economics, and quantitative analysis.

Participants are not expected to become experts or technicians in the various disciplines and subjects included in the curriculum. The objectives are to provide orientation on the overall functioning of the defense management process; insights as to what defense management requires in the way of inputs and analysis for decision-making; understanding of the principles, methods and techniques used, and awareness of the interfaces between management requirements of the Defense Department components and the Office of the Secretary of Defense. Course methodology includes lectures, small group discussions reinforced by illustrative case studies and problems sets, as well as selected daily reading assignments.

This course is primarily for U.S. officials, although limited numbers of foreign participants are normally also enrolled.

### **INTERNATIONAL DEFENSE MANAGEMENT COURSE**

The course is designed for participants in the military grades of 0-4 (Major/Lieutenant Commander) through 0-6 (Colonel/Captain) and defense related civilians of equivalent rank. Enrollment is currently limited to a maximum of 50 participants. Broad national representation is desired for this course, i.e., participation of at least eight or ten nations enhances the value of the comparative management aspects of this curriculum.

The course is presented in English.

The course provides a series of lectures in three major areas: environmental factors; quantitative and economic analysis, and management systems in the context of strategy, implementation, and operations. The lectures are supplemented by small group discussions and workshops which con-

centrate on the lecture topics and associated readings, problems and cases. In the discussion groups, faculty members guide the interchange of ideas and are available to answer questions. Readings are assigned from within texts and supplemental material given to the participants to facilitate preparation for each lecture. Lecture outlines with additional suggested reading lists are provided. Occasional open seminar speakers are invited for special topics.

Early in the course, participants are requested to give brief presentations (by country) on their particular environmental situations, including such information as geographic factors, economic factors, social and cultural considerations, governmental and defense organizations, and unique management situations and/or problems. Throughout the course, the participants are encouraged to present and discuss information with respect to the defense management systems of their countries, and to examine how the management concepts and techniques discussed by both the faculty and the participants from other countries may be applied in their own situations. Comparative study by means of interaction among participants is considered to be an extremely valuable characteristic of the course.

During the course, the Center conducts field trips to selected military and commercial installations in the central California area. These trips provide an opportunity for the participants to receive special briefings on management techniques and problems, and to observe actual practices at the operating level.

In the second half of the course, the general concepts of defense management are elaborated in detail during the examination of actual systems in financial, material and human resources management. At the end of the course, a general review integrates the formal course material, special topics, and field trip experiences.

**SENIOR INTERNATIONAL  
DEFENSE MANAGEMENT  
COURSE**

Enrollment is restricted to military flag and general officers (grades 0-7 and above) and defense-related civilians of equivalent rank, except that for countries where the 0-6 grade is comparable to flag/general rank such officials may be enrolled on a waiver basis.

Participation in this course is normally from 40 to 50 senior officials from as many as 22 countries.

The course is presented in English.

The lecture, small discussion group, environmental seminar, case study and problem format and content described above for IDMC also apply, but are compressed in time. Two or three guest speakers are invited to address the class and a short field trip is conducted.

**TENTATIVE SCHEDULE OF RESIDENT COURSES**

**Defense Resources Management Education Center**

**FISCAL YEAR 1990**

COURSE NAME	COURSE NUMBER	LENGTH (weeks)	DATES (inclusive)
*INTERNATIONAL DEFENSE MANAGEMENT COURSE	IDMC 89-2	11	25 SEP -- 07 DEC 1989
DEFENSE RESOURCES MANAGEMENT COURSE	DRMC 90-1	4	08 JAN -- 02 FEB 1990
INTERNATIONAL DEFENSE MANAGEMENT COURSE	IDMC 90-1	11	05 FEB -- 18 APR 1990
DEFENSE RESOURCES MANAGEMENT COURSE	DRMC 90-2	4	23 APR -- 17 MAY 1990
DEFENSE RESOURCES MANAGEMENT COURSE	DRMC 90-3	4	21 MAY -- 15 JUN 1990
21st ANNUAL SENIOR INTERNATIONAL DEFENSE MANAGEMENT COURSE	SIDMC 90	4	25 JUN -- 20 JUL 1990

DEFENSE RESOURCES MANAGEMENT COURSE	DRMC 90-5	4	20 AUG -- 14 SEP 1990
*INTERNATIONAL DEFENSE MANAGEMENT COURSE	IDMC 90-2	11	24 SEP -- 06 DEC 1990

\*These courses convene in one fiscal year and continue into the next fiscal year

## DISTINGUISHED ALUMNI

Among those U.S. officers who have completed a curricular program at the Naval Postgraduate School, the following officers (USN unless otherwise indicated) have attained flag rank and were on the active list as of August 1989:

Admiral James B. Busey	Rear Admiral James R. Fitzgerald
Vice Admiral Stanley R. Arthur	Rear Admiral R.D. Friichtenicht
Vice Admiral Roger F. Bacon	Rear Admiral Salvatore F. Gallo
Vice Admiral John D. Costello, USCG	Rear Admiral George N. Gee
Vice Admiral George W. Davis, IV	Rear Admiral Richard C. Gentz
Vice Admiral James F. Dorsey, Jr.	Rear Admiral W. Lewis Glenn, Jr.
Vice Admiral Robert F. Dunn	Rear Admiral James B. Greene, Jr.
Vice Admiral Peter M. Hekman, Jr.	Rear Admiral Roland G. Guilbault
Vice Admiral Albert J. Herberger	Major General Richard A. Gustafson, USMC
Vice Admiral Jerome L. Johnson	Rear Admiral B.F. Hollingsworth, USCG
Vice Admiral Robert K.U. Kihune	Rear Admiral Lowell J. Holloway
Vice Admiral Henry H. Mauz, Jr.	Brigadier General Joseph E. Hopkins, USA
Vice Admiral Paul F. McCarthy, Jr.	Rear Admiral R.B. Horne, Jr.
Vice Admiral John W. Nyquist	Rear Admiral Robert J. Kelly
Vice Admiral Jerry O. Tuttle	Rear Admiral James E. Koehr
Vice Admiral Joseph B. Wilkinson, Jr.	Rear Admiral Bobby C. Lee
Rear Admiral John W. Adams	Rear Admiral Irve C. Lemoyne
Rear Admiral Richard C. Allen	Rear Admiral Stephen F. Loftus
Brigadier General John C. Arick, USMC	Rear Admiral Richard C. Macke
Rear Admiral Robert C. Austin	Rear Admiral Kenneth C. Malley
Brigadier General James D. Beans, USMC	Rear Admiral Daniel P. March
Rear Admiral James B. Best	Rear Admiral Thomas T. Matterson, USCG
Rear Admiral Thomas C. Betterton	Rear Admiral Henry C. McKinney
Rear Admiral Larry E. Blöse	Rear Admiral Eric A. McVadon, Jr.
Rear Admiral William C. Bowes	Rear Admiral Thomas A. Meinicke
Rear Admiral Jerry C. Breast	Rear Admiral George R. Meinig, Jr.
Rear Admiral Dennis M. Brooks	Rear Admiral Thomas A. Mercer
Rear Admiral John F. Calhoun	Rear Admiral William F. Merlin, USCG
Rear Admiral John F. Calvert	Rear Admiral Fredrick J. Metz
Rear Admiral Arlington F. Campbell	Rear Admiral James E. Miller
Rear Admiral Kenneth L. Carlsen	Rear Admiral Richard D. Milligan
Rear Admiral William C. Carlson	Rear Admiral Riley D. Mixson
Lieutenant General W.G. Carson, Jr., USMC	Brigadier General James M. Myatt, USMC
Rear Admiral Stephen K. Chadwick	Rear Admiral Phillip R. Olson
Rear Admiral Ming E. Chang	Rear Admiral Paul W. Parcells
Rear Admiral Charles F. Clark	Rear Admiral Thomas D. Paulsen
Rear Admiral Michael C. Colley	Rear Admiral Richard F. Pittenger
Rear Admiral Eugene D. Conner	Rear Admiral Harry S. Quast
Rear Admiral Walter J. Davis	Rear Admiral Joseph P. Reason
Rear Admiral William A. Dougherty, Jr.	Rear Admiral James G. Reynolds
Rear Admiral Philip F. Duffy	Rear Admiral Daniel C. Richardson
Rear Admiral William A. Earner	
Rear Admiral Thomas R.M. Emery	

## DISTINGUISHED ALUMNI

---

Rear Admiral Gerald L. Riendeau  
Rear Admiral David N. Rogers  
Rear Admiral Grant A. Sharp  
Rear Admiral John F. Shaw  
Brigadier General David V. Shuter,  
USMC  
Brigadier General Stephen Silvasy,  
Jr., USA  
Rear Admiral Vernon C. Smith  
Rear Admiral Rodney K. Squibb  
Rear Admiral George H. Strohsahl, Jr.  
Rear Admiral James E. Taylor  
Rear Admiral Jeremy D. Taylor  
Rear Admiral Ralph L. Tindal

Rear Admiral Paul E. Tobin  
Rear Admiral Robert L. Topping  
Rear Admiral Robert E. Traister  
Rear Admiral Jerry L. Unruh  
Rear Admiral Richard C. Ustick
